though this agreement was made by the two families without consulting the hearts of the parties concerned, the latter had secretly entertained an affection for each other. Jeronymo del M— and Antonia C— had been always brought up together; and the little constraint imposed on two children whom their parents were already accustomed to regard as united, soon produced between them a connexion of the tenderest kind. The congeniality of their tempers cemented this intimacy, and in riper years it matured insensibly into love. An absence of four years, far from cooling this passion, had only served to inflame it; and Jeronymo returned to the arms of his intended bride as faithful and as ardent as if they had never been separated. The raptures occasioned by his return had not subsided, nor the preparations for the happy day discontinued, when Jeronymo disappeared. He used frequently to pass the afternoon in a summer-house which commanded a prospect of the sea, and was accustomed to take the diversion of sailing on the water. One day, when he was at his favourite retirement, it was observed that he remained a much longer time than usual without returning, and his friends began to be very uneasy on his account. Boats were despatched after him, vessels were sent to sea in quest of him—no person had seen him—none of his servants could have attended him, for none of them were absent: night came on, and he did not appear. The next morning dawned—the day passed—the evening succeeded—Jeronymo came not. Already had they begun to give themselves up to the most melancholy conjectures, when the news arrived that an Algerine pirate had landed the preceding day on that coast, and carried off several of the inhabitants. Two galleys, ready equipped, were immediately ordered to sea. The old marquess himself embarked in one of them, to attempt the deliverance of his son at the peril of his own life. On the third day they perceived the corsair. The wind was favourable—they were just about to overtake him, and even approached so near to him, that Lorenzo, who was in one of the galleys, fancied that he saw, upon the deck of the adversary’s ship, a signal made by his brother—when a sudden storm separated the vessels. Hardly could the almost shipwrecked galleys sustain the fury of the tempest. The pirate, in the mean time, had disappeared, and the distressed state of the other vessels obliged them to put into Malta. The affliction of the family was beyond all bounds. The distracted old marquess tore his gray hairs in the utmost violence of grief; and the life of the young countess was despaired of. Five years were consumed after this event in fruitless inquiries, diligent search was made all along the coast of Barbary, and immense sums were offered for the ransom of the young marquess, but to no purpose. The only conjecture founded on probability was, that the same storm which had separated the galleys from the pirate had destroyed the latter vessel, and that the whole ship’s company had perished in the waves. But this supposition, however probable, as it did not by any means amount to a certainty, could not authorise the family to renounce the hope that the absent Jeronymo might again appear. In case, however, that he did not, either the family’s name must be suffered to perish, or the youngest son must relinquish the church, and enter into the rights of the eldest. Justice seemed to oppose the latter measure; and, on the other hand, the necessity of preserving the family from annihilation required that the scruple should not be carried too far. In the mean

time, sorrow, added to the weight of age, was bringing the marquess fast to his grave. Every unsuccessful attempt served to increase his distress, and diminish the hope of finding his lost son. He saw that his name might be perpetuated by acting with a little injustice, in consenting to favour his younger son at the expense of the elder. The fulfilment of his agreement with Count C—— required only the change of a name; for the object of the two families was equally accomplished, whether Antonia became the wife of Lorenzo or Jeronymo. The faint probability of the latter's appearing again, weighed but little against the certain and pressing danger of the total extinction of the family; and the old marquess, who considered his dissolution fast approaching, ardently wished to die free from this inquietude. Lorenzo alone, who was to be principally benefited by this measure, opposed it with the greatest obstinacy. He resisted, with equal firmness, the allurements of an immense fortune, and the attractions of a beautiful and accomplished object ready to be delivered into his arms. He refused, on principles the most generous and conscientious, to invade the rights of a brother, who, for any thing he knew, might himself be in a capacity to resume them.

All that Lorenzo could obtain was a delay of two years. During this period they continued their inquiries with the utmost diligence. Lorenzo himself made several voyages, and exposed his person to many dangers. No trouble, no expense, was spared to recover the lost Jeronymo. These two years, however, like those which preceded them, were consumed in vain."

" 'Antonia,' continued the Sicilian, 'experienced the most violent struggle between duty and inclination, between dislike and admiration. The disinterested generosity of a brother affected her. She felt herself forced to esteem a person whom she could never love. Her heart, torn by contrary sentiments, felt the bitterest distress; but her repugnance to the chevalier seemed to increase in the same degree as his claims upon her esteem augmented. Lorenzo perceived with heartfelt sorrow the secret grief that consumed her youth. An unconquerable sympathy for her misfortune insensibly eradicated that indifference with which till then Lorenzo had been accustomed to consider her. But this delusive sentiment deceived him, and an ungovernable passion began rapidly to shake the steadiness of his virtue, which till then had been unequalled. He, however, still obeyed the dictates of generosity, though at the expense of his love. By his efforts alone was the unfortunate victim protected against the cruel and arbitrary proceedings of the rest of the family. But his endeavours were ineffectual. Every victory he gained over his passion rendered him more worthy of Antonia; and the disinterestedness with which he refused her, left her without an apology for resistance. Thus were affairs situated, when the chevalier engaged me to visit him at his father's villa. The earnest recommendation of my patron procured me a reception which exceeded my most sanguine wishes. I must not forget to mention, that, by some remarkable operations, I had previously rendered my name famous in different lodges of free-masons. This circumstance perhaps contributed to strengthen the old marquess's confidence in me, and to heighten his expectations. I beg you will excuse me from describing particularly the lengths I went with him, or the means which I employed. You may form some judgment of them from what I have before confessed to

you. Profiting by the mystic books which I was found in his very extensive library, I was soon able to speak to him in his own language, and to adorn my system of the invisible world with the most extraordinary inventions. He was therefore with so little difficulty induced to credit the fables I taught him, that in a short time he would have believed as implicitly in the secret commerce of philosophers and sylphs as in any article of the canon. The marquess, being very religious, had acquired in the school of theology a facility of belief which caused him at once to be fascinated with the stories I told him, and to put the most unreserved confidence in my character. At length I entangled him so completely in mystery, that he would no longer believe any thing that was natural. In short, I became the adored apostle of the house. The usual subject of my lectures was the exaltation of human nature, and the intercourse of men with superior things; the infallible Count Gabolis* was my oracle. Antonia, whose mind since the loss of her lover had been more occupied in the world of spirits than in that of nature, and who had a strong tincture of melancholy in her composition, caught every hint I gave her with a fearful satisfaction. Even the servants contrived to have some business in the room when I was speaking, and, seizing part of my conversation, formed from it mysterious presages. Two months were passed in this manner at the marquess's villa, when the chevalier one morning entered my apartment. His features had experienced a considerable alteration, and from his sorrowful countenance I suspected that something preyed upon his mind. He threw himself upon a couch with every symptom of despair. 'I am distracted, ruined,' said he; 'I must, I cannot support it any longer.' 'What is the matter with you, chevalier? What has befallen you?' 'Oh, this terrible passion!' said he, starting from his seat and throwing himself into my arms. 'I have combated against it like a man, but can resist it no longer.' 'And whose fault is it but your own, my dear chevalier? Are they not all willing to gratify this passion? Your father? your relations?' 'My father! my relations!—what are they to me? I want not to be united to her by force. Have not I a rival? Alas! and what a rival! Perhaps a dead one! Oh! let me go,—let me go to the end of the world; I must find my brother.' 'What! after so many unsuccessful attempts, have you still any hope?' 'Hope! alas, no! It has long since been banished from my heart—but it has not from hers: of what consequence are my sentiments? Is it possible that I should be happy whilst there remains a gleam of hope in Antonia's breast? Two words, my friend, would end my torments—but in vain; my destiny must continue to be miserable, till eternity shall break its long silence, and the grave shall speak in my behalf.' 'Is it, then, a state of certainty that would render you happy?' 'Happy? Alas! I doubt whether I shall ever be happy again; but uncertainty is of all others the most dreadful affliction.' After a short interval of silence, he continued, with an emotion less violent:—'If he could see my torments! Surely a constancy which renders his brother miserable cannot add to his happiness! Can it be just, that the living should suffer so much for the sake of the dead?—that I should fruitlessly pine for an object which Jeronymo can no longer enjoy? If he knew the pangs I suffer,' (said he, concealing

his face, while the tears streamed from his eyes,) 'perhaps he himself would conduct her to my arms.' 'But is there no possibility of gratifying your wishes?' He started! 'What do you say, my friend?' 'Less important occasions than the present,' said I, 'have disturbed the repose of the dead for the sake of the living: is not the terrestrial happiness of a man, of a brother—' 'The terrestrial happiness! Ah, my friend, I feel but too sensibly the force of your expression—my entire felicity!' 'And the tranquillity of a distressed family, are not these sufficient to justify such a measure? If any sublimary concern can authorise us to interrupt the peace of the blessed, to make use of a power—' 'For God's sake, my friend!' said he, interrupting me, 'no more of this; once, I avow it, I had such a thought—I think I mentioned it to you; but I have long since rejected it as horrid and abominable.' 'You will have conjectured already,' continued the Sicilian, 'to what this conversation led us; I endeavoured to overcome the scruples of the chevalier, and at last succeeded. We resolved to call the ghost of the deceased Jeronymo: I only stipulated for a delay of a fortnight, in order, as I pretended, to prepare in a suitable manner for an act so solemn. The time being expired, and my machinery in readiness, I took advantage of a very gloomy day, when we were all assembled as usual, to communicate the affair to the family; and not only brought them to consent to it, but even to make it a subject of their own request. The most difficult part of the task was to obtain the approbation of Antonia, whose presence was essential. My endeavours were, however, greatly assisted by the melancholy turn of her mind, and perhaps still more so by a faint hope that Jeronymo might still be living, and therefore would not appear. A want of confidence in the thing itself was the only obstacle which I had to remove. Having obtained the consent of the family, the third day was fixed on for the operation; I prepared then for the solemn transaction by mystical instruction, fasting, solitude, and prayers, which I ordered to be continued till late in the night. Much use was also made of a certain musical instrument, unknown till that time; and in such cases it has often been found very powerful. The effect of these artifices was so much beyond my expectation, that the enthusiasm which on this occasion I was obliged to shew, was infinitely heightened by that of my audience. The long-expected moment at last arrived.'

" 'I omit the description of the juggling farce itself, as it would be too tedious to relate. It is sufficient to say, that it answered my expectation; the old marquess, the young countess, her mother, Lorenzo, and several other persons of the family, were present. You will imagine, that during my long residence in the house I took all opportunities of gathering information respecting every thing that concerned the deceased. Several of his portraits enabled me to give the apparition a striking likeness; and as I suffered the ghost to speak only by signs, that the sound of his voice might excite no suspicion, the departed Jeronymo appeared in the dress of a Moorish slave, with a deep wound in his neck. You observe, that in this respect I was counteracting the general supposition that he had perished in the waves. I had reason to hope, that this unexpected circumstance would heighten the belief in the apparition itself; for nothing appeared to me more dangerous than to be too natural.'

" 'I asked the ghost, whether there was any thing in this world which he still considered as

* "A mystical work written in French by the Abbé de Villars."

his own, and whether he had left anything behind that was particularly dear to him? The ghost thrice shook his head, and lifted up his hands towards heaven. Previous to his retiring, he dropped a ring from his finger, which was found on the floor after he had disappeared; Antonia took it, and, looking at it attentively, she knew it to be the wedding-ring she had presented to her intended husband.

“The family fancied themselves convinced that Jeronymo was no more. From that very day they publicly announced his death, and went into mourning. The circumstance of the ring left no doubt even in the mind of Antonia, and added a considerable weight to the addresses of the chevalier. In the mean time, the violent impression which the young countess had received from the sight of the apparition brought on her a disorder so dangerous, that the hopes of Lorenzo were very near being destroyed for ever. On her recovering, she insisted upon taking the veil; and it was only by the serious remonstrances of her confessor, in whom she placed an implicit confidence, that she was brought to abandon her project. At length the united solicitations of the family, aided by the confessor, wrested from her the desired consent. The last day of mourning was fixed on for the day of marriage, and the old marquess determined to add to the solemnity of the occasion, by resigning all his estates to his lawful heir. The day arrived, and Lorenzo received his trembling bride at the altar. In the evening a splendid banquet was prepared for the guests, in a hall superbly illuminated. The most lively and delightful music contributed to increase the general joy of the assembly. The venerable marquess wished all the world to participate in his felicity. The gates of the palace were thrown open, and every one that came in was joyfully welcomed. In the midst of the throng—” The Sicilian paused—a trembling expectation suspended our breath. ‘In the midst of the throng,’ continued the prisoner, ‘appeared a Franciscan monk, to whom my attention was directed by a person who sat next to me at table. He was standing motionless like a marble pillar. His shape was tall and thin; his face pale and ghastly; his aspect grave and mournful; and his eyes were fixed on the new-married couple. The joy which beamed on the face of every one present, appeared not on his. His countenance never once varied. He seemed like a statue among living persons. Such an object, appearing amidst the general joy, struck me more forcibly from its contrast with every thing around me. It left on my mind so durable an impression, that from it alone I have been enabled (which would otherwise have been impossible) to recollect in the Russian officer the features of this Franciscan monk; for, without doubt, you must have already conceived, that the person I have described was no other than your Armenian. I frequently attempted to withdraw my eyes from this figure, but they returned involuntarily, and found him always unaltered. I pointed him out to the person who sat nearest to me on the other side, and he did the same to the person next to him. In a few minutes a general curiosity and astonishment pervaded the whole company. The conversation languished; a general silence succeeded; nor did the monk interrupt it. He continued motionless, and always the same; his grave and mournful looks constantly fixed upon the new-married couple:—his appearance struck every one with terror. The young countess alone, who found the transcript of her

own sorrow in the face of the stranger, beheld with a sullen satisfaction the only object that seemed to sympathise in her sufferings. The crowd insensibly diminished, for it was past midnight. The music became faint and languid; the tapers grew dim, and many of them went out. The conversation, declining by degrees, lost itself at last in secret murmurs, and the faintly illuminated hall was nearly deserted. The monk, in the mean time, continued motionless, his grave and mournful look still fixed on the new-married couple. The company at length rose from the table. The guests dispersed. The family assembled in a separate group, and the monk, though uninvited, continued near them. How it happened that no person spoke to him, I cannot conceive. The female friends now surrounded the trembling bride, who cast a supplicating and distressed look on the awful stranger; but he did not answer it. The gentlemen assembled in the same manner around the bridegroom. A solemn and anxious silence prevailed among them. At length, ‘How happy we are here together!’ said the old marquess, who alone seemed not to behold the stranger, or at least seemed to behold him without dismay. ‘How happy we are here together!’ and yet my son Jeronymo cannot be with us!’ ‘Have you not invited him, and did not he answer your invitation?’ asked the monk. It was the first time he had spoken. We looked at him alarmed. ‘Alas! he is gone to a place whence there is no return,’ answered the old man. ‘Reverend father, you misunderstood me;—my son Jeronymo is dead.’ ‘Perhaps he only fears to appear in this company,’ replied the monk. ‘Who knows how your son Jeronymo may be situated? Let him now hear the voice which he heard the last. Desire your son Lorenzo to call him.’ ‘What does he mean?’ whispered the company one to another. Lorenzo changed colour. My own hair almost stood erect on my head. In the mean time the monk approached a sideboard. He took a glass of wine, and bringing it to his lips,—‘To the memory of our dear Jeronymo,’ said he: ‘every one who loved the deceased will follow my example.’ ‘Wherever you come from, reverend father,’ exclaimed the old marquess, ‘you have pronounced a dearly-beloved name, and you are welcome here;’ then turning to us, he offered us full glasses. ‘Come, my friends! let us not be surpassed by a stranger. The memory of my son Jeronymo!’ Never, I believe, was any toast less heartily received. ‘There is one glass left,’ said the marquess. ‘Why does my son Lorenzo refuse to pay this friendly tribute?’ Lorenzo tremblingly received the glass from the hands of the monk,—tremblingly he put it to his lips. ‘My dearly beloved brother Jeronymo!’ The name trembled on his tongue, and, being seized with horror, he replaced the glass unemptied. ‘That is the voice of my murderer!’ exclaimed a terrible figure, which appeared instantaneously in the midst of us, covered with blood, and disfigured with horrible wounds. ‘But ask nothing further from me,’ added the Sicilian, with every symptom of horror in his countenance. ‘I lost my senses the moment I looked at this apparition. The same happened to every one present. When we recovered, the monk and the ghost had disappeared. Lorenzo was in the agonies of death. He was carried to bed in the most dreadful convulsions. No person attended him but his confessor and the sorrowful old marquess, in whose presence he expired. The marquess died a few weeks after him. Lorenzo’s secret is concealed in the bosom of the priest who re-

ceived his last confession; and no person ever learned what it was. Soon after this event, a deep well was cleaned in the farm yard of the marquess’s villa: it had been disused many years, and the mouth of it was almost closed up by shrubs and old trees. A skeleton was found among the rubbish. The house where this happened is now no more—the family del M— is extinct—and Antonia’s tomb may be seen in a convent not far from Salerno.”

A ghost-story like the above is just fit for a winter evening.

Reflections on the Politics, Intercourse, and Trade of the Ancient Nations of Africa. By A. H. L. Heeren. 2 vols. 8vo. Oxford, 1832. Talboys.

We have long been acquainted with the works of this admirable author in their original excellence—we have seen his labours filtered into hundreds of channels, and prized in all—we have even had portions of them in English translation in our possession for a considerable time; but we have only now the pleasure of acknowledging the appearance of two volumes, for which the public is deeply indebted to an Oxford publisher—Mr. Talboys. It is a reproach to the literature of England, and one of the most pregnant proofs of its trading spirit (for the short-sighted mercenariness are never, in a liberal sense, wise even for their own interests), that Professor Heeren’s erudite and enlightening researches should have been neglected by our language.

These volumes contain his investigation of the ancient history of Carthage, Ethiopia, and Egypt; and are full of matter of the utmost value to those who love such investigations as have, by the common consent of mankind, been esteemed the best sources of human wisdom, government, and prosperity. Possessed of great learning and industry, Mr. Heeren displays other qualities, but too seldom found in the mere antiquary—he is also philosophic in his views, clear in his expositions, and striking in his combination of facts. His reasoning may be wrong (as all reasoning on past data is liable to be), but it is always most instructive—our minds are enlarged by it, and we hardly care whether the conclusions are true or erroneous.

Such is the character of the author, a portion of whose works we rejoice to see before us; and it will readily be felt how impossible it is for any reviewer to do justice to a production so connected and profound, by brief quotations or analysis. We ought to transcribe extracts enough for fifty *Gazettes*, to enable our readers to appreciate his merits: we can only make a sign.

The Carthaginians occupy more than one half of Vol. I.—to Carthage the power of England has been compared; and therefore we will take a leaf out of that history.

“There will be found no closer resemblance to the struggle of these two parties in Carthage, than that of the Whigs and Tories during the war of the Spanish succession in England. Were not the latter justified in wishing for peace, although Marlborough, at the head of the Whigs, was against it? This comparison might be carried still farther, and could not fail to be instructive if it were in place here. Perhaps there is not in history a finer parallel than might be drawn between Hannibal and Marlborough, if a Plutarch could be found to do it justice. Their both contending for ten years upon a foreign soil, without being subdued, would alone be sufficient to justify the comparison. But much more striking similarities are found in their general circumstances—

in their bold enterprises—in the formation of their heterogeneous armies—in their murderous battles, planned for annihilation—in their comprehensive political activity—in their dominion over the men by whom they were surrounded—in their unfortunate fates—and, indeed, even in their perhaps unique weakness, for both were unable to withstand the influence of gold. The proper and authentic key to Hannibal's character is found in *Polybius*, iii. p. 144, as the writer obtained it from the mouth of Massinissa, at one time the friend and fellow-warrior of the great Carthaginian."

"Probably, from the course of this war [the second Roman], we may in some degree account for that decline of the maritime forces of the republic during it, which even ancient writers have considered as one of the main causes of its fall, and which nowhere appears more evident than in Scipio's crossing over to Africa without a fleet being sent out to oppose him. In the prosecution of their design, the Barcas had but little occasion for a navy; it had held therefore only a secondary place; and the powerful exertions which the land service cost, perhaps rendered it impossible to maintain the other upon an equal footing. However this may have been, what we have above said will sufficiently answer the question, how this party spirit first arose? And it is, properly, upon this question that the fall of every republic usually depends. A nation united in itself is unconquerable; but the most mighty people become an easy prey to their enemies when the spirit of faction prevails over patriotism.

"In the decline of free states every misfortune becomes doubled, as it scarcely ever fails to reanimate the fury of parties. Mortified pride seeks for revenge; and the guilt of unsuccessful war and humiliating peace is hurled from one party to the other. Their mutual hate is thus not only increased, but becomes greater than their hate to the most haughty foe; and thus becomes explained the melancholy, though in history ever-varying, phenomenon, that it becomes easy for the enemies of such a state to form themselves a party, by which they gain intelligence of all its designs. This melancholy phenomenon shewed itself at Carthage, in its fullest extent, after the second peace with Rome."

May not England learn and apply something to its present condition from the following extract?

"It is only from a due consideration of all these circumstances that we can judge of the rise and progress of the Barcine faction, and of the changes which it produced. At its origin it espoused the cause of the people; but the wealth of Spain was sufficient to corrupt even many of the great, and with them a strong party in the senate, where, at the commencement of the second war with Rome, the Barcas evidently had a decided preponderance. The more, however, the partisans of that house were enriched, the more easy it was for envy to stir up the people for a time against it, till the heroic valour of Hannibal again put them to silence. This flexible disposition of the party is precisely the most striking proof of the truth of the narrative; for it is one of the grossest mistakes into which history can fall, to consider political parties, especially in republics, as constant and unchanging bodies; though there is no more difficult task for the historian than to trace out their variations. From all this, the truth and meaning of Polybius's remark, that the Carthaginian government had degenerated before the commencement of the second war

with Rome, by an increase of the power of the people, will be set in a just light. The senate at that time appears, indeed, as the ruling body; but the senate itself was ruled by a faction, which relied upon its great favour with the people, though another party was always opposed to it, of which Hannibal the Great, till the end of the second war, seems to have been the leader."

As we purpose this notice to be nothing more than the introduction of a sterling and most valuable publication to the notice of our readers, we shall not now say more than that Professor Heeren himself has approved the translation, which, if not very highly polished, may therefore be considered to be accurate—the best requisite it could possess.

Mémoires de Madame la Duchesse d'Abrantes.

8vo. Tomes I. II. III. et IV. à Londres, 1831. Colburn and Bentley.

The same: English Translation. 2 vols.

THE Duchesse of Abrantes is a warm and decided Bonapartist; but, making allowances for the occasional colouring which this feeling may impart to her tableaux, we have every reason to place great reliance on their truth, and to believe them to be as generally accurate as they are interesting. The French volumes have been some weeks before the public: the English translation is in progress, and will, we are informed, appear in a fortnight. Meanwhile we avail ourselves of a copy of the former, and a portion of the latter, to present our readers with a sample of Madame la Duchesse's performance. Her qualifications for the task are certainly first-rate.

"I may fearlessly affirm, that of all the individuals who have written about Napoleon, few are so competent as myself to give a detailed account of him. My mother, who was the friend of Letitia Bonaparte, was present at his birth. She rocked him in his cradle, and was second mother to him when he quitted Brienne and came to Paris. Not only Napoleon, but his brothers and sisters almost formed part of our family. I shall presently speak of the friendship which arose between myself and Napoleon's sisters—a friendship which one of them has entirely forgotten. When my mother quitted Corsica to follow my father to France, the friendly relations which subsisted between her and the Bonaparte family suffered no change by absence or distance. The conduct of my parents towards Bonaparte, the father, when he came to Montpellier to die, far from his country and all that was dear to him, should never be forgotten by either of the two families. It should be remembered by the one with gratitude, and by the other with that feeling of satisfaction which the performance of a good action creates. The other members of the Bonaparte family were also favourites of my mother. Lucien found in her more than a common friend. When he formed that strange union with Mademoiselle Boyer, my mother received his wife as her own daughter. Of our intimacy with Madame Joseph Bonaparte and Madame Leclerc, the details into which I shall enter in the course of these volumes will afford an accurate idea. My husband's connexion with Bonaparte commenced with the siege of Toulon, and from that time they continued united until Junot's death. Thus, I may say, that without having been always near Bonaparte, I saw him and heard him almost with my own eyes and ears."

The early anecdotes of Buonaparte are the best yet given to the world; because the most intimate and familiar—*es. gr. i—*

"In the spring of 1793, Bonaparte, before he went to Toulon, having obtained leave of absence, made a visit to Corsica. After his arrival at Ajaccio he lodged near the sea-port, in the house of an old lady, the Countess Rossi, a friend of his family. A club was formed in a barrack situated without the city, in what is called the Sea-square. In this club several orators distinguished themselves, and Napoleon Bonaparte was a frequent speaker. Some of the inhabitants of Ajaccio, alarmed at the formidable aspect of this club, established another assembly, which was attended by several persons of my acquaintance. Among others by a naval officer, whose ship was lying in the roads of Corsica, and who by his talent and courage was very capable of counteracting the measures of the first-mentioned club, should they have become dangerous. This assembly was held in a large house on the opposite side of the square. Its object was to maintain tranquillity, and prevent disorder. The club, of which Bonaparte was a member, at length became so threatening to the public tranquillity, that the moderate assembly resolved to send a deputation to it to point out the mischief it was likely to occasion to the country. The naval officer, to whom I have above alluded, was at the head of this deputation, which consisted of himself and three other members of the assembly. They advised the club to be peaceable,—above all, to wait for the decision of France, and to follow the movement of the republican government. Bonaparte immediately mounted the tribune, and delivered a vehement speech; the object of which was to shew that in times of revolution people must be either friends or enemies, that Solon punished with death every man who remained neutral in civil discord, and that the moderates ought, therefore, to be considered enemies by true patriots. When the sitting was at an end, Napoleon went out into the square. He was very much heated, and seemed but little disposed to any thing conciliating. However, his violence did not intimidate my friend, who was at the head of the deputation. He reproached him for what he had said in the tribune. 'Bah,' said Bonaparte, 'a mere club-speech, nothing else. But, my friend, do you not see the necessity of firmness, and of choosing a wide road instead of a narrow path?' 'You,' replied my friend, 'will perhaps lose yourself in the road you have chosen; and, in the name of friendship, I conjure you to alter your course.' Bonaparte frowned, turned on his heel, and went off to join some of his turbulent colleagues. Some days afterwards my friend learned from some of his correspondents in the interior of the island, that four thousand peasants intended to make a descent from the mountains, and that their hostility would be particularly directed against the families of Salicetti and Bonaparte. My friend warned Bonaparte of the danger. Napoleon wished to know whence my friend had obtained the information. He was exceedingly angry because my friend would not tell him. At length he said, 'No matter, I fear no one.' He parted from my friend coolly. Early next morning my friend's gondolier came to inform him, that he had just seen Bonaparte, in the disguise of a sailor, stepping into a gondola for the purpose of proceeding to Calvi. My friend immediately went out to ascertain the truth of this statement, which was corroborated by all the sailors of the port. On inquiring what had become of the Bonaparte family, he was informed they had taken refuge at Cargèse. At the time when these circumstances occurred, Bonaparte had

just received his commission of captain of artillery. Shortly after, he was sent to Toulon to command the works of the siege. * * *

"Whilst the most frightful scenes were passing in the convention, the respectable inhabitants of Paris shut themselves up in their houses, concealed their valuables, and awaited with fearful anxiety the result. Towards evening, my brother, whom we had not seen during the whole day, came home to get something to eat: he was almost famished, not having tasted food since the morning. Disorder still raged, and we heard the most frightful noise in the streets, mingled with the beating of drums. The faubourg St. Antoine, which was regularly armed, according to the proposition of Tallien, excited the most serious alarm. My brother had scarcely finished his hasty repast, when General Bonaparte arrived to make a similar demand upon our hospitality. He also, he told us, had tasted nothing since the morning; for all the restaurateurs were closed. He soon despatched what my brother had left, and as he was eating he told us the news of the day. It was most appalling! My brother had informed us but of a part. He did not know of the assassination of the unfortunate Ferraud, whose body had been cut almost piecemeal. 'They took his head,' said Bonaparte, 'and presented it to poor Boissy d'Anglas, and this fiend-like act almost killed the president in his chair. Truly,' added he, 'if we continue thus to sully our revolution, it will be a disgrace to be a Frenchman.'"

The following version of one of the most memorable epochs in the life of this extraordinary man has deeply interested us.

"With respect to the emotion observed in General Bonaparte in the Hall of the Five Hundred at St. Cloud, the following is its true explanation. It is no presumption, but the actual fact:—On the general's entering the orangery, he no sooner appeared than violent outcries were raised against him,—'Down with the Cromwell!' 'No dictator!' 'Outlaw him!' General Bonaparte knew very well that the Council of Five Hundred was composed of ultra republicans, and of enthusiastic partisans of the constitution of the year Three; but he had depended too much upon the success of Lucien's exertions, who had laboured all night to strengthen his brother's party. It is a fact, that this reception, without alarming him to the extent of enchainning his faculties, not only induced surprise, but that surprise for the moment deprived him of the words he would have opposed to these vociferations. He reflected how he should act, and his resolution was speedily taken. It was necessary to decide the question instantly, a result which would not have followed upon discussion. He might even have been assassinated; and if he had run the risk, it would not have been a display of valour, but of folly. With an eagle's glance he saw through the circumstances which surrounded him. This self-consultation lasted perhaps some minutes, and the untalented many, judging by themselves, attributed this silence and inaction to fear. But he was not surrounded by those only who were thus incapable of appreciating his sentiments. I also have collected the judgments of eye-witnesses, who, possessing the free use of their reason, and merit on a level with his standard, have read his great mind without doing it injustice. Again, it is difficult to give credit to so many things being done and said in the very short space of time which General Bonaparte passed in the hall of the Council of Five Hundred; it was but an apparition. And with the same

frankness with which I have defended him from the imputation of cowardice, I will add, that I do not believe that a poniard was raised against him; it was Lucien who, after his brother's departure, was in real danger. I know that much has been said of this attempted assassination; perhaps General Bonaparte believed it himself; at least it is true, that when he was in the court of the palace, he told it to the soldiers; but, I repeat, I do not believe it. It is not, however, any doubt of the hatred of Pépé Arena against Bonaparte which makes me question the fact; but simply the manner in which the events are said to have taken place. One peculiarity is sufficiently remarkable, that this same day Bonaparte, in addressing the troops, never stood still, and that he moved only in a zig-zag direction. For why? Was he afraid of a pistol-shot from the windows? This conjecture may be correct. My brother-in-law was on the palace steps when Bonaparte came down. His friendship for Lucien made him extremely anxious for the fate of the young tribune. He saw his brother making his harangue, and his tortuous promenades, without taking any step to provide assistance for the president of the council, who meanwhile might be murdered in his curule chair. He approached Bonaparte, and named Lucien: the general immediately turned towards an officer who was a few paces distant from him. 'Colonel Dumoulin,' said he, 'take a battalion of grenadiers, and hasten to my brother's deliverance.' The choice which General Bonaparte made of this officer shews the tact with which he could seize the smallest circumstances that could be turned to his advantage. Colonel Dumoulin was the first aide-de-camp of General Brune, commander-in-chief of a triumphant army in Holland. Already Moreau had given his public pledge in acting as guard to the directors. The first aide-de-camp of Brune commanding the battalion which dispersed the opposing council, would circulate the impression that Brune himself was in concert with Bonaparte. This assurance was with many people a more than sufficient counterpoise to the fear which the retirement of Jourdan and Bernadotte, both known as warm republicans, had inspired. I am sure that Bonaparte had at first no fixed idea upon this subject; but, with that lively and rapid conception which embraced all things with a glance, he no sooner perceived Colonel Dumoulin, than his name started from his lips."

"I must not omit to mention a visit which, a short time before these great events, I had made to Lucien's villa of le Plessis Chamant. All Napoleon's family, at that time, possessed some pretty estates, in which they took pleasure in receiving society. Joseph had Morfontaine; Lucien, le Plessis Chamant; Madame Leclerc, Montgobert. At Morfontaine, excursions upon the lakes, public readings, billiards, literature, ghost stories more or less mysterious, a perfect ease and liberty, gave charms to the passing hour. To this must be added that which filled the measure of enjoyment, the most friendly, invariably friendly reception, which was always accorded by the master and mistress of the mansion. They did not admit every one indifferently; but when once any person was established as a member of their society, they were sure of experiencing the most courteous hospitality from Joseph Bonaparte and his lady. Madame Lucien was equally amiable; but her husband's temper was not by much so even. That did not lessen the amusement to be found at Plessis; perhaps it in some measure contributed to it."

We shall, of course, resume these works: this is but a taste of their captivating quality.

Tour of a German Prince, &c. 2 vols.

[Third Notice.]

IN pursuing our review of this book, we shall now content ourselves with extracting a

TALE OF GALWAY.

"In an obscure corner of the town stands a house of extreme antiquity, over the door of which are still to be seen a skull and cross-bones, remarkably well sculptured in black marble. This house is called 'the cross-bones,' and its tragical history is as follows. In the fifteenth century, James Lynch, a man of old family and great wealth, was chosen mayor of Galway for life, an office which was then nearly equal to that of a sovereign in power and influence. He was revered for his inflexible rectitude, and loved for his condescension and mildness. But yet more beloved—the idol of the citizens and their fair wives—was his son, according to the chronicle, one of the most distinguished young men of his time. To perfect manly beauty and the most noble air, he united that cheerful temper, that considerate familiarity, which subdues while it seems to flatter; that attaching grace of manner, which conquers all hearts without an effort, by its mere natural charm. On the other hand, his oft-proved patriotism, his high-hearted generosity, his romantic courage, and complete mastery in all warlike exercises forming part of an education singular in his age and country, secured to him the permanency of an esteem which his first aspect involuntarily bespoke. So much light was not without shadow. Deep and burning passions, a haughty temper, jealousy of all rival merit, rendered all his fine qualities only so many sources of danger to himself and others. Often had his stern father, although proud of such a son, cause for bitter reproof, and for yet more anxious solicitude about the future. But even he could not resist the sweetness of the youth, as quick to repent as to err, and who never for a moment failed in love and reverence to himself. After his first displeasure was past, the defects of his son appeared to him, as they did to all others, only spots on the sun. He was soon still further tranquillised by the vehement and tender attachment which the young man appeared to have conceived for Anna Blake, the daughter of his best friend, and a girl possessing every lovely and attaching quality. He looked forward to their union as the fulfilment of all his wishes. But fate had willed it otherwise. While young Lynch found more difficulty in conquering the heart of the present object of his love than he had ever experienced before, his father was called by business to Cadiz; for the great men of Galway, like the other inhabitants of considerable sea-ports in the middle ages, held trade on a large scale to be an employment nowise unworthy even of men of noble birth. Galway was at that time so powerful and so widely known, that, as the chronicle relates, an Arab merchant, who had long traded to these coasts from the East, once inquired 'in what part of Galway Ireland lay?' After James Lynch had delegated his authority to trusty hands, and prepared every thing for a distant journey, with an overflowing heart he blessed his son, wished him the best issue to his suit, and sailed for his destination. Wherever he went, success crowned his undertakings. For this he was much indebted to the friendly services of a Spanish merchant named Gomez, towards whom his noble heart conceived the liveliest gratitude.

It happened that Gomez also had an only son, who, like Edward Lynch, was the idol of his family and the darling of his native city, though in character, as well as in external appearance, entirely different from him. Both were handsome; but Edward's was the beauty of the haughty and breathing Apollo; Gonsalvo's of the serene and mild St. John. The one appeared like a rock crowned with flowers; the other like a fragrant rose-covered knoll threatened by the storm. The pagan virtues adorned the one; Christian gentleness and humility the other. Gonsalvo's graceful person exhibited more softness than energy; his languid dark blue eyes, more tenderness and love than boldness and pride; a soft melancholy overshadowed his countenance, and an air of voluptuous suffering quivered about his swelling lips, around which a timid smile rarely played, like a gentle wave gliding over pearls and coral. His mind corresponded to such a person: loving and endearing, of a grave and melancholy serenity, of more internal than external activity, he preferred solitude to the bustle and tumult of society, but attached himself with the strongest affection to those who treated him with kindness and friendship. His inmost heart was thus warmed by a fire which, like that of a volcano buried too deep to break out at the surface, is only seen in the increased fertility of the soil above, which it clothes in the softest green, and decks with the brightest flowers. Thus captivating, and easily captivated, was it a wonder if he stole the palm even out of the hand of Edward Lynch? But Edward's father had no such anticipations. Full of gratitude to his friend, and of affection for his engaging son, he determined to propose to the old Gomez a marriage between Gonsalvo and his daughter. The offer was too flattering to be refused. The fathers were soon agreed; and it was decided that Gonsalvo should accompany his future father-in-law to the coast of Ireland, and if the inclinations of the young people favoured the project, their union should take place at the same time with Edward's, after which they should immediately return to Spain. Gonsalvo, who was just nineteen, accompanied the revered friend of his father with joy. His young romantic spirit enjoyed in silent and delighted anticipation the varying scenes of strange lands which he was about to see; the wonders of the deep which he would contemplate; the new sort of existence of unknown people with whom he was to be connected; and his warm heart already attached itself to the girl, of whose charms her father gave him, perhaps, a too partial description. Every moment of the long voyage, which at that time abounded with dangers, and required a much longer period than now, increased the intimacy and mutual attachment of the travellers; and when at length they descried the port of Galway, the old Lynch congratulated himself not only on the second son which God had sent him, but on the beneficial influence which the unvarying gentleness of the amiable youth would have on Edward's darker and more vehement character. This hope appeared likely to be completely fulfilled. Edward, who found all in Gomez that was wanting in himself, felt his own nature as it were completed by his society; and as he had already learned from his father that he was to regard him as a brother, their friendship soon ripened into the warmest and most sincere affection. But not many months had passed before some uneasy feelings arose in Edward's mind to trouble this harmony. Gonsalvo had become the husband of his sister, but had deferred his return to

Spain for an indefinite time. He was become the object of general admiration, attention, and love. Edward felt that he was less happy than formerly. For the first time in his life neglected, he could not conceal from himself that he had found a successful rival of his former universal and uncontested popularity. But what shook him most fearfully, what wounded his heart no less than his pride, what prepared for him intolerable and restless torments, was the perception, which every day confirmed, that Anna, whom he looked upon as his—though she still refused to confess her love,—that his Anna had, ever since the arrival of the handsome stranger, grown colder and colder towards himself. Nay, he even imagined that in unguarded moments he had seen her speaking eyes rest, as if weighed down with heavy thoughts, on the soft and beautiful features of Gomez, and a faint blush then pass over her pale cheek; but if his eye met hers, this soft bloom suddenly became the burning glow of fever. Yes, he could not doubt it; her whole deportment was altered: capricious, humour-some, restless, sometimes sunk in deep melancholy, then suddenly breaking into fits of violent mirth, she seemed to retain only the outward form of the sensible, clear-minded, serene, and equal-tempered girl she had always appeared. Every thing betrayed to the quick eye of jealousy that she was the prey of some deep-seated passion; and for whom?—for whom could it be but for Gomez?—for him, at whose every action it was evident the inmost cords of her heart gave out their altered tone. It has been wisely said, that love is more nearly akin to hate than to liking. What passed in Edward's bosom was a proof of this. Henceforth it seemed his sole enjoyment to give pain to the woman he passionately loved; and now, in the bitterness of his heart, held guilty of all his sufferings. Wherever occasion presented itself, he sought to humble and to embarrass her, to sting her by disdainful pride, or to overwhelm her with cutting reproaches; till, conscious of her secret crime, shame and anguish overpowered the wretched girl, and she burst into torrents of tears, which alone had power to allay the scorching fever of his heart. But no kindly reconciliation followed these scenes, and, as with lovers, resolved the dissonance into blessed harmony. The exasperation of each was only heightened to desperation: and when he at length saw enkindled in Gomez—so little capable of concealment—the same fire which burnt in the eyes of Anna; when he thought he saw his sister neglected and himself betrayed by a serpent whom he had cherished in his bosom—he stood at that point of human infirmity, of which the All-seeing alone can decide whether it be madness or the condition of a still-accountable creature. On the same night in which suspicion had driven Edward from his couch a restless wanderer, it appears that the guilty lovers had for the first time met in secret. According to the subsequent confession of Edward, he had concealed himself behind a pillar, and had seen Gomez, wrapped in his mantle, glide with hurried steps out of a well-known side-door in the house of Anna's father, which led immediately to her apartments. At the horrible certainty which now glared upon him, the fury of hell took possession of his soul: his eyes started from their sockets, the blood rushed and throbbed as if it would burst his veins, and as a man dying of thirst pants for a draught of cooling water, so did his whole being pant for the blood of his rival. Like an infuriate tiger he darted upon the unhappy youth, who recognised him, and

vainly fled. Edward instantly overtook him, seized him, and burying his dagger a hundred times, with strokes like lightning-flashes, in the quivering body, gashed with satanic rage the beautiful features which had robbed him of his beloved, and of peace. It was not till the moon broke forth from behind a dark cloud, and suddenly lighted the ghastly spectacle before him,—the disfigured mass, which retained scarcely a feature of his once beloved friend, the streams of blood which bathed the body and all the earth around it,—that he waked with horror, as from some infernal dream. But the deed was done, and judgment was at hand. Led by the instinct of self-preservation, he fled, like Cain, into the nearest wood. How long he wandered there he could not recollect. Fear, love, repentance, despair, and at last madness, pursued him like frightful companions, and at length robbed him of consciousness,—for a time annihilating the terrors of the past in forgetfulness; for kind nature puts an end to intolerable sufferings of mind, as of body, by insensibility or death. Meanwhile the murder was soon known in the city; and the fearful end of the gentle youth, who had confided himself, a foreigner, to their hospitality, was learned by all with sorrow and indignation. A dagger, steeped in blood, had been found lying by the velvet cap of the Spaniard, and not far from it a hat, ornamented with plumes and a clasp of gems, shewed the recent traces of a man who seemed to have sought safety in the direction of the wood. The hat was immediately recognised as Edward's; and as he was no where to be found, fears were soon entertained that he had been murdered with his friend. The terrified father mounted his horse, and, accompanied by a crowd of people calling for vengeance, swore solemnly that nothing should save the murderer, were he even compelled to execute him with his own hands. We may imagine the shouts of joy, and the feelings of the father, when, at break of day, Edward Lynch was found sunk under a tree, living, and although covered with blood, yet apparently without any dangerous wound. We may imagine the shudder which ran through the crowd,—the feelings of the father we cannot imagine,—when, restored to sense, he embraced his father's knees, declared himself the murderer of Gonsalvo, and earnestly implored instant punishment. He was brought home bound, tried before a full assembly of the magistrates, and condemned to death by his own father. But the people would not lose their darling. Like the waves of the tempest-troubled sea, they filled the market-place and the streets, and forgetting the crime of the son in the relentless justice of the father, demanded with threatening cries the opening of the prison and the pardon of the criminal. During the night, though the guards were doubled, it was with great difficulty that the incensed mob were withheld from breaking in. Towards morning, it was announced to the mayor that all resistance would soon be vain, for that a part of the soldiers had gone over to the people;—only the foreign guard held out,—and all demanded with furious cries the instant liberation of the criminal. At this, the inflexible magistrate took a resolution, which many will call inhuman, but whose awful self-conquest certainly belongs to the rarest examples of stoical firmness. Accompanied by a priest, he proceeded through a secret passage to the dungeon of his son; and when, with newly-awakened desire of life, excited by the sympathy of his fellow-citizens, Edward sunk at his feet, and asked eagerly if he brought him mercy and

pardon? The old man replied with unfaltering voice, 'No, my son, in this world there is no mercy for you; your life is irrevocably forfeited to the law, and at sunrise you must die. One-and-twenty years I have prayed for your earthly happiness,—but that is past,—turn your thoughts now to eternity; and if there be yet hope there, let us now kneel down together and implore the Almighty to grant you mercy hereafter;—but then I hope my son, though he could not live worthy of his father, will at least know how to die worthy of him.' With these words he rekindled the noble pride of the once dauntless youth, and after a short prayer, he surrendered himself with heroic resignation to his father's pitiless will. As the people, and the greater part of the armed men mingled in their ranks, now prepared, amidst more wild and furious menaces, to storm the prison, James Lynch appeared at a lofty window; his son stood at his side with the halter round his neck. 'I have sworn,' exclaimed the inflexible magistrate, 'that Gonsalvo's murderer should die, even though I must perform the office of the executioner myself. Providence has taken me at my word; and you, madmen, learn from the most wretched of fathers, that nothing must stop the course of justice, and that even the ties of nature must break before it.' While he spoke these words, he had made fast the rope to an iron beam projecting from the wall, and now suddenly pushing his son out of the window, he completed his dreadful work. Nor did he leave the spot till the last convulsive struggles gave certainty of the death of his unhappy victim. As if struck by a thunder-clap, the tumultuous mob had beheld the horrible spectacle in death-like silence, and every man glided, as if stunned, to his own house. From that moment the mayor of Galway resigned all his occupations and dignities, and was never beheld by any eye but those of his own family. He never left his house till he was carried from it to his grave. Anna Blake died in a convent. Both families in course of time disappeared from the earth; but the skull and cross-bones still mark the scene of this fearful tragedy."

The Bouquet for 1832. London, S. Robinson; W. Kidd; and Sherwood and Co. Not worth the silken dress in which it walks. Ill-finished engravings, all published before; a selection of papers which have recently appeared in magazines, so that any possessing merit are already thrice-told tales with the public; one or two original contributions, which might as well have remained unpublished;—such are the contents of this volume. Truly it may be called a Bouquet of faded flowers.

Geographical Annual, or Family Cabinet Atlas. London, 1832. Bull.

THIS beautiful and most useful little volume, a perfect picture of elegance, and yet containing, on a small scale, a vast sum of geographical information, consists of the maps which formed the *Family Cabinet Atlas*. A more instructive present, or a gift better calculated to be long preserved and often referred to, could not be offered to favoured youth of either sex.

The Continental Annual; or, Romantic Cabinet for 1832. With Illustrations by S. Prout. Edited by W. Kennedy. London, Smith, Elder, and Co.

THE literary part of this volume is very inferior to the pictorial department. We had expected much more from Mr. Kennedy and any one he would associate with him: the

idea of illustrating the drawings, not by mere description, but by narrative, is good; but it is heavily carried into execution. Abounding in improbabilities, which the imagination has not been sufficiently excited to receive—the tale lengthened beyond what its *matériel* can bear—an utter want of interest—an equal deficiency in graphic power,—the work before us is a failure. The story of "the Prima Donna," though in three parts, is literally all about nothing. The "Rose of Rouen" is the best-told tale, and only wants compression to make a pleasant history of a modern Bluebeard. We regret we cannot award to this volume the warm praise we have had to bestow on some of its competitors; and we regret it the more from our high opinion of Mr. Kennedy's talents.

A General and Heraldic Dictionary of the Peerages of England, Ireland, and Scotland, extinct, dormant, and in abeyance. By John Burke, Esq. *England.* 8vo. pp. 632. London, 1831. Colburn and Bentley.

TO Mr. Burke's Peerage and Baronetage this is a capital sequel; replete with curious genealogical, historical, and antiquarian information, and at the same time possessing the attractions of legendary lore and amusement. Some of the old title-descents are highly interesting in their details: the rise and fall of great men, the fame and extinction of celebrated names, afford much matter for reflection. The connexion, too, of the majority of these personages with the principal families which have figured or figure in our annals, throws over their heraldic memories another touch of interest. Among the novelties, is a tree of the Vauxes, from which it is deduced that the present Lord Chancellor is descended from Baron Vaux of Harrowden, ennobled by patent in April, 1573, and who traced his ancestry to princes of that name in Normandy and Provence, so ancient as the year 794. They were, it seems, called *Beaux*, *Baux*, *Vaux*, *de Valibus*; and a flaming account is given of their being emperors of Greece, despots of Romania, princes of Achaia, &c. &c. &c.; so that instead of being a man sprung from the people, Henry Brougham has a thousand years of imperial, royal, and noble blood in his veins.

A portrait of the late Duke of York is prefixed to this volume; which is truly worthy of general approbation, from the immense variety of half-forgotten anecdote and history revived by it, and from its necessary association with so many inquiries. Should Lord Grey venture on a new batch of peers, he may find plenty of fine titles for them in these pages.

ORIGINAL CORRESPONDENCE.

TURKEY:—REMARKABLE TEMPEST.

[While some of our public journals] are assuring their readers that there has been no storm on the Bosphorus, as previously stated, we have received the following very interesting description of it from a friend, who was first burnt out from Pera, and then exposed to its fury.—*Ed. L. G.*]

Extract of a Letter, dated October 11.

ABOUT seven o'clock of the 5th October, as we were preparing for our daily excursion, we perceived a black cloud gathering over the neighbouring hills, and heard the mutterings of distant thunder. We therefore postponed our walk, and watched the darkness that was rapidly overshadowing the Bosphorus. Suddenly we were surprised to see the water boiling up like a cauldron, in a particular spot; and before our surmises were at an end, something similar to a large paving-stone fell into

the sea, under our window, and was immediately followed by another. After gazing at this for a little time, we were startled by a volley of the same material against our windows, which, in a few moments, shattered them into a thousand pieces. The work of destruction was fairly commenced; and to avoid the fragments of broken glass, I rushed into the landing-place. Here, however, matters were worse, instead of better: the roof had been beaten in, and huge masses of ice were rebounding from wall to wall. These immense balls continued falling for about ten minutes: they then became gradually smaller, and the elementary riot concluded by a common hail-shower. The stones were of sufficient weight to perforate the tiled roof like bullets, and left it as full of holes as a colander; so that the rain which followed came pouring into all the rooms as if through a sieve. We measured many of those hail-stones, and found them to be five or six inches in diameter.* They were hard lumps of pure, solid ice: some were round, some angular, as if a number of smaller pieces were congealed together; while others seemed to be in layers, like the various coats of an onion. The heat on the previous day had been most oppressive: the thermometer stood at 89, and during the storm it fell to 66. Commodore Porter, the ambassador from the United States, was going hence to Constantinople, in his *caïque*, with presents to the Sultan, when he was overtaken by this terrible storm. He afterwards declared, that he had been in battles, earthquakes, and dangers, by sea and land, but had never felt in such an awful situation before. To use his own powerful expression, "it seemed as if the canopy of heaven was congealed, and had suddenly burst open, and descended in large masses of ice." The hand of one of his boatmen, was crushed to pieces. Every one in the *caïque* silently waited his doom; for they expected nothing less than death.

The cloud which carried this destruction passed over Pera and Constantinople, and shattered all the houses which the recent fires had spared. Happy England! with all its little agitations, which you think so much of! Here we live in perpetual terror of *real* misfortunes—fire, plague, cholera, and now this storm—all rendered more striking when contrasted with the beauty of the climate, than which nothing can be more delightful. I must not forget to mention that this evil cloud was limited in breadth. It passed from the Sea of Marmora to the Black Sea, all along one side of the Bosphorus, the European shore, and did not touch the Asiatic. Two men only were killed on the mountains, about Buyuodere, who were working in a vineyard, and could not find shelter. Below, in the town, the deaths were more numerous, though not so important. A flock of geese were sedately walking along when the shower commenced. The poor things stretched out their necks, and began to gabble; but not aware, I suppose, of the danger, made no haste to get under cover, and the people were afraid to go to their rescue. When the storm ceased they were all dead.

Did you hear of the fête, and its strange conclusion, at Scutari? The Sultan's son and heir was circumsed, and, for an entire week, the large plain where all the pilgrims assemble on their journey to Mecca was covered with tents. In a field before the Sultan's *kiash*, I saw a number of persons acting a play; the greensward formed their stage, on which the dancing girls also exhibited: the effect was wild

* We shall give engraved specimens of these remarkable hailstones in our next.

and picturesque, as their long hair streamed behind them, and their movements were agile and graceful. The spectators formed a circle round them of nearly a mile in circumference. On the same night that I witnessed this cheerful meeting, where even Turks forgot their apathy, three hundred men were strangled! It was stated that they were concerned in the fire at Pera. Several of them were officers in the army, who were invited into the Sultan's kiosk, from which they never returned; they were secretly despatched, and their bodies thrown into the Bosphorus. What would you in England say to such proceedings?

The cholera has visited us from Odessa, but has passed, comparatively speaking, slightly over Constantinople. We kept strict quarantine; and indeed, as far as not touching people or things in the street, we still keep it. Within a few doors of us, an entire family, and their medical attendant, died of the plague.

When you hear of these things at a distance, you are quite terrified; but we, who are so near, think nothing of them. We are now quite familiarised with horrors.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

FEW reports from committees were read on Wednesday; one, however, seemed to give general satisfaction, and will, no doubt, prove highly advantageous to coachmakers, and, indeed, to all builders of four-wheel vehicles—we allude to Mr. Ryder's method of ascertaining the draft of carriages. It appeared that several experiments had been made with a carriage built upright and narrow, and one long and low-roofed, according to the present fashion. That of the latter construction had the advantage in every respect, as regards velocity and safety; and though the model would have induced those who saw it to believe that the carriage must be much heavier, the difference in that respect was an object of little or no consideration. The report recommended it to the Society for reward.

A cup for effervescing mixtures; an instrument for drawing in perspective; a drawing-board; a glass pen; a communication on portable frescoes, and a dissected map of the constellations, were reported as not possessing sufficient novelty to entitle the inventors to the Society's notice.

Mr. Horsman Solly, who was in the chair during the absence of the Secretary, communicated to the Society that he had offered three of his lectures, which he had delivered last session, to the Society, for publication in their Transactions;—a valuable donation, which cannot but add to the interest of the Society's publication. The thanks of the Institution were voted to the Secretary; and the worthy member communicated the same to him, on his return, with great warmth and kindness.

ROYAL GEOGRAPHICAL SOCIETY.

NOVEMBER 14th.—Lord Goderich (president) in the chair. A paper was read on the question, "Is the Quorra the Niger of antiquity, or not?" communicated by Colonel Leake, who answers the inquiry in the affirmative; observing, at the same time, that the interest of the investigation is not merely that due to correct nomenclature, but is further connected with the much higher endeavour to draw, from an individual case, general inferences as to the precise geographical knowledge possessed by the ancients. [An analysis of this paper we must defer.]

The meeting proceeded to the special business of the evening, viz. to confer the royal premium for last year on Mr. Richard Lander for his discoveries in Africa; and to receive a report from the council relative to the union of the African Association with the Society. Regarding the first of these, the noble President observed, "that his Majesty having graciously and munificently bestowed an annual donation of fifty guineas on the Society, to constitute a royal premium for the encouragement of geographical science and discovery, it gave him, and he was certain it would give the Society, great pleasure to find itself called on, the first time this was conferred, to bestow it on so worthy an individual. Mr. Lander was one of those men of whom England had so frequently to boast, who derived no advantages from birth or education, but who, by his own patience, spirit, temper, and perseverance, had achieved celebrity, and ultimately succeeded in placing himself in the foremost rank of modern discoverers. He had, therefore, the greatest pleasure in conveying this prize to him—he fully deserved it." Mr. Lander made a short but appropriate reply. Lord Goderich's address was very happily expressed. He spoke with great feeling, and was much cheered by the meeting, which seemed cordially to sympathise with its noble chairman in the sentiments he so impressively uttered, and to take a deep interest in the passing scene. Sure we are, that the public bestowal of such honours must have an excellent effect; and we regret they have been so unfrequent amongst us.

"As regarded the African Association," (his lordship then proceeded,) "that body had made overtures within the last few months to join the Society, on condition that such of its members as were not already members also of the Royal Geographical Society should become such, on payment of the usual fees, without form of ballot; and the council had eagerly accepted an offer so honourable and so gratifying. The labours of the African Association were well known; and its character stood so high as to make inquiry almost superfluous as to the individuals thus introduced. But when he further read the names of Lord Clive, Henry Banks, Esq., Charles Hoare, Esq., H. H. Hoare, Esq., and John Motteux, Esq., as being the gentlemen in question, he was persuaded the Society would most cordially approve of the act of council which had provisionally admitted them as members." Which was accordingly carried by acclamation, and the meeting adjourned.

We rejoice to have to add, that Lord Goderich's and the Government's countenance of Lander have not been confined to honorary distinctions. That enterprising and singularly deserving traveller has, at the earnest recommendation of his lordship to Mr. Edward Ellice, been appointed to a situation in the Customs, sufficient to enable him to pass the remainder of his days in comfort and respectability. This act reflects great credit on Ministers; and we individually cherish some satisfaction in having (not perhaps that it was required, or did produce any influence) been parties to its warm recommendation. We had, however, the pleasure to hear the promise made some months ago, which has now been so liberally fulfilled; and we trust it is not going too far to express a hope, that something may also be done for John Lander, the attached brother, and sharer in all the fatigues and perils of the discoverer of the course of the Niger.

PHRENOLOGICAL SOCIETY.

THE London Phrenological Society held their first meeting on Monday; Dr. Elliotson, president, in the chair. Several members were elected. The president read a paper on the attacks that had been made on phrenology since the last session.

LITERARY AND LEARNED.

SOCIETY OF ANTIQUARIES.

ON Thursday evening this Society commenced their sittings for the season; Thomas Amyott, Esq., in the chair. Mr. Milne exhibited some Roman remains, consisting of part of a very large earthen vessel, a copper coin of Domitian in most excellent preservation, a hatchet, a gilt steelyard, &c., found with several skeletons, buried in peat, near Ware in Hertfordshire.

A communication was read from Mr. Stark, on the lordship of Thonock, in the parish of Gainsborough, Lincolnshire, and a Danish encampment and tumuli there. It entered into a long historical account of the owners of the lordship from an early period, and described the encampment as being near Thonock Hall, of an oval form, and having a triple foss and a vallum, apparently impregnable against any weapon of the era to which it belonged, but as powerless against an attack according to modern warfare. In some of the tumuli were found a battle-axe, similar in form to an Indian tomahawk, a key, a dagger, and other remains. Mr. Stark then proceeded to the question, whether the camp was Roman or Danish; and, in addition to the evidence of tradition in favour of the latter, he stated, that, in the ninth century, Sweyn, king of Denmark, entered the Humber with a powerful army, and, having landed, carried his victorious arms to York, which he besieged and took, and, after ravaging the country, brought considerable spoils into Lincolnshire, where he died. It was reasonable, he concluded, to suppose that one of the tumuli in the neighbourhood of the camp was the burial-place of Sweyn.

FINE ARTS.

NEW PUBLICATIONS.

National Portrait Gallery of Illustrious and Eminent Personages; particularly of the Nineteenth Century. With Memoirs by William Jerdan, Esq., F.S.A., &c. Part XXXI. Fisher, Son, and Co.

JOHN SCOTT, Earl of Eldon; Sir Alexander Johnston, Knt.; Thomas Moore, Esq. It would be difficult to instance two distinguished men more opposite in their politics, in their pursuits in life,—were it not that they are equally amiable, we might say—in their private character and deportment, than the first and the last of the eminent individuals whose memoirs constitute the thirty-first Number of the *National Portrait Gallery*. They have, however, been too much and too long before the public, to justify the expectation that much of novelty can be told respecting either of them, though some facts appear of high political importance and authenticity in the sketch of the Chancellor. Less extensively known in Europe than in Asia, the life of Sir Alexander Johnston has, on the contrary, furnished his biographer with a number of facts, not less interesting from their freshness than from their exhibiting the honourable and useful career of a highly-gifted and excellent person. From the memoir of Sir Alexander Johnston, therefore, we purpose extracting a few passages in a future Number.

The History and Topography of the United States of North America. By John Howard Hinton, A.M. Parts XXI. to XXV. Hinton. The embellishments of this apparently very able work continue to be as pleasing and various as ever. Two of the most striking are, "The Capitol, at Washington," and "The View from Mount Washington."

THE WARRIOR'S WIFE.

WE have had the pleasure of seeing another of Mr. Parris's beautiful pictures, which he has recently finished. It is "The Warrior's Wife." She is represented anxiously awaiting the return of her husband from the field of battle. In her countenance the mingled emotions of hope and fear are powerfully depicted. A sleeping infant in her lap, and the declining sun, indicate the approach of evening. The accessories are well imagined, and skilfully disposed; and the whole work is full of taste and feeling; and is painted with singular richness and depth of colour. We are happy to add, that this fine and interesting performance has been purchased by her Majesty; an honour of which Mr. Parris has just reason to be proud. We may take the present opportunity of observing, that nothing can be more unfounded and unfair than the assertion that the arts have not been encouraged in the present reign. Since his accession to the throne, his Majesty has given several liberal orders to Stanfield and others, for marine subjects; a class of art to which the early habits of his life naturally incline him: Sir W. Beechey is busy painting several portraits of the King and Queen in their robes; Chantrey is at this time executing for his Majesty some of the noblest colossal works ever produced in this country: Wilkie is engaged upon a portrait of the King at Brighton. In the mean while, the Queen has shewn much interest in the subject. Most of the public exhibitions of works of art have been visited, some of them repeatedly, by her Majesty and her connexions; and we have just mentioned an instance of her patronage of an artist of great merit and rising reputation. If so much kindly feeling towards the arts has been evinced under the unfavourable public circumstances which have lately prevailed, what may not be expected when the terrors of reform and cholera have passed away, and when the country is permitted, as we trust it will be permitted, to enjoy that tranquillity so indispensable to the cultivation of the more liberal and elegant pursuits of life?

A recent visit to the *atelier* of Mr. Briggs has also afforded us very great pleasure. We found this eminent artist warm in the lucrative branch of portrait painting; though not divorced from those higher works of art which have so justly raised his name to a leading rank. In his new pursuit he is strikingly successful: a group, Mrs. Siddons and Miss F. Kemble, is one of the most interesting which can be imagined. C. Kemble, an admirable likeness; Ramohun Roy, an equally fine whole length; Mr. Planché, a capital head; Judge Alderson, and others, all proclaim the masterly hand which has produced them.

CHOLERA MORBUS.

Advice, which all may understand, on the Medical Treatment of the Pestilential Cholera.

For practical purposes it is not sufficient that the nature and seat of the disease is pointed out, or that the line of treatment to be pursued, or the method of combating the symp-

oms, should be described, to enable a non-medical person to be prepared to repel the attacks, or preserve a friend from a painful and extraordinary disease. Even under the most common circumstances there are a host of minor details in the symptoms of the malady which constitute the whole of the difficulties of medical "exploration" and "diagnosis." As, however, we are determined to be useful to our readers as far as is in our power, we shall, in the present Number, devote ourselves to the description of the principal medicaments which have been recommended for the pestilential cholera, with a statement of their doses and the manner of exhibiting them.

On being seized with Cholera.—On the first attack, bleeding, or hot-water and vapour-baths, are to be resorted to. The former is a surgical operation, and dangerous in its performance without proper anatomical knowledge: with regard to the latter, we have lately heard of a novel mode of exhibiting the vapour-bath by means of a tea-kettle: the patient is enclosed in a blanket, and the spout of the kettle introduced between the folds; the kettle is to be kept boiling, and a most efficient vapour-bath is produced.

External Applications.—The coldness and clamminess of the skin are obviated by friction: this may be done with dry and heated substances, as flannel or hare-skins, or with the addition of stimulating remedies, as camphor, which can be reduced into powder by using a small proportion of spirits of wine. The principal liquid preparations of camphor for rubbing are the camphorated spirits of wine, which we formerly objected to on account of the rapid evaporation of the rectified spirits; the camphor liniment (olive oil and camphor) is not liable to the same objection, but that oils are bad rubefacients; the compound liniment of camphor (camphor, hartshorn, and oil of rosemary); the camphorate soap liniment (camphor, soap, oil of rosemary, and spirits of wine); and opodeldoc (camphor, marrow, soap, oils of thyme and rosemary, hartshorn, &c.) We do not give the quantities, when the preparations alluded to can be obtained at the druggists' under the names made use of in the text.

Internal Remedies.—The temperature of the body is sustained internally by hot wine and water, with spices, cloves, cinnamon, or ginger; or, in persons accustomed to indulgence in wine or spirituous liquors, by punch, or that which is most agreeable to them, providing that it is warmer and stronger than usual. These restoratives must also, when the succession of symptoms is so very rapid, be made the vehicle of those medicines upon which hitherto the greatest reliance has been placed—we mean the sedatives and stimulants. The temperature of the skin and surface is, in the interval of frictions, to be sustained by hot flannels, heated bricks, bags of sand or bran, or bottles of hot water; these must be placed at the feet, the calves of the legs, and in contact with any of those parts of the body which are most liable to be spasmodically affected. A blister should be raised on the pit of the stomach. If the ordinary plaster of the cantharides fly is found too slow in its operation, the emetic tartar may be used (tartar emetic one dram and a half, and spermaceti ointment one ounce; or, liniment of ammonia one ounce, tartarised antimony one dram): but more immediate relief has been obtained by the sudden effusion of boiling water on the stomach, and by placing a small quantity of tow soaked with turpentine, and setting it on fire. The sedative applications externally

are poppy-heads and henbane-leaves, in the proportion of two ounces of the former to one of the latter, boiled in a pint of water, and applied as warm as can be borne without raising a blister. The poultices of mustard and linseed meal are made by mixing the two ingredients in equal proportions together; the mustard to be moist, so that the whole forms a paste, and nothing must intervene between the poultice and the skin. These poultices may be applied to the seat of pain, whether the chest, the heart, or the "abdomen;" and they may succeed the blister on the pit of the stomach. They also act as a counter-irritant when placed at the feet. In the internal exhibition of medicines great attention must be paid to the age, the habits, and the idiosyncrasy of the patient. It must be evident to every one, that age must have much influence upon the dose of any medicine; and if we consider that a child ten years old and a man of sixty will only take one half of what a person of thirty-five will, we have a fair average. The habits are the peculiarities of constitution, of occupation, and of nourishment, of indulgences or deprivations of the patient; and the idiosyncrasies are the different effects of the same medicaments upon different individuals—as we see laudanum excites wakefulness and feverish action in some, and antimony become a poison to certain children. Laudanum may be exhibited in doses of from 20, 30, 40, or even 60 drops, at intervals of a quarter to half an hour; but it is more efficacious combined with sulphuric ether, 25 to 30 drops of each. When sulphuric ether is not used, camphor or sal volatile should be administered; the former can be given in doses of from two grains to a scruple in pills, or suspended in a mixture by means of a mucilage, or the yolk of an egg; the latter in doses of a tea-spoonful in hot water. When laudanum disagrees with the patient, solid opium, or what is preferable, the extract of lettuce or of henbane, must be taken. The dose of the first is from two grains to a scruple, or even a dram; that of the second, from one grain to a scruple. Calomel, more especially in India, has been used in very large doses in this pestilence.

Farther Medicaments.—It appears particularly necessary, that, while we endeavour to restore the loss of temperature and deadness of the surface of the body and of the limbs produced by an impeded circulation, and to moderate the spasms consequent on vital reaction, we should also endeavour internally to combat the temporary atrophy (loss) of the functions of the liver, kidneys, and other glandular structures; and calomel must be resorted to for this purpose. At the same time, the evacuations, which by their quantity and rapidity threaten to carry away the patient, may be alleviated by injections of harburs and starch, or slightly opiated liquids. We cannot recommend the inhaling of gas without the assistance of a chemist or a medical man, more particularly nitrous oxide, whose effects have so often proved deleterious. The essential oils which have been used with success as powerful stimulants, are, oil of cajuput, obtained from a shrub of the myrtle family growing in Amboyna and Borneo—it may be taken

* We have received a letter from Dr. Whitley Aitchison of Edinburgh, in which he states, that, to the best of his knowledge, he was the first Indian practitioner who suggested the use of galvanism, or of oxygen, in the cholera. Dr. A. also states, that it was an opinion of Dr. T. that bad rice might occasion cholera, and not his own. We quoted from rosemary, from a work of Dr. Aitchison on "Inflammation," and not on "Cholera." Dr. A. further gives it as his opinion, that the disease at present existing in this country is cholera passing from the more dense to the epidemic type.

oes of from three to six drops; the essential of cinnamon in doses of from one to six; oil of cloves and oil of nutmeg, two to four: all these oils may be dropped a lump of sugar, or triturated with sugar, dissolved in spirits of wine.

Such are the simple remedies to be used in attacks of the pestilential cholera. It has been remarked, that many works have been published, and many essays written, but no recipe has yet been found. If it had, such tails as we here present would be needless: in the midst of our ignorance with regard to the remote cause of the disease, that we must rake up all the treasures of medicine and the resources of experience to alleviate the painful and varied symptoms, and ward off their fatal and melancholy termination. There are many other modes of treatment that have been proposed by eminent medical practitioners in our own country and the continent. We have deviated very little from the directions published by the Board of the College of Physicians; for amidst the profusion, we have found them the most simple, and we should think they will be the most efficacious.

Before we terminate the subject, we hope now or some length of time, we must leave these dull details of measures and quantities, to make a few remarks upon the progress of the disease in this country. It appears that there have been hitherto comparatively very few cases, averaging two or three in a day, till, at the beginning of this week, the disease again began to shew a more formidable character. In the mean time, a meeting has been held of the medical men of Sunderland, at which they almost all of them expressed their opinion, that the pestilential cholera did not exist in that town. We have no doubt that as medical men they gave an unbiassed opinion as to the nature of the disease which does exist there; but need we inform the reflecting public, that the same difference of discrimination and judgment exists in the professors of the healing art as in any other profession or pursuit; and that even the titles given by monopolism of intellect and of credentials, cannot convey their knowledge or experience to those whom they license to practise the Hippocratic art? Certain it is, that there have been no cases from Sunderland hitherto given to the public which entitle us to consider the disease existing there as the Asiatic or pestilential cholera: but if a number of medical men make an assertion, they should support it by facts, and publish such account of the cases, detailing the difference of their symptoms from those of the Asiatic cholera, as would give conviction to an anxious and alarmed country: if not, they only oppose opinion to opinion, and then certainly we should lean towards that of Drs. Daun and Gibson, who have seen the disease, as the gentleman also had who was among the first to announce its appearance in the town. Nor, while we remark upon the difficulties which surround this question, can we avoid expressing some surprise at the little information we obtain from the individuals who transmit their bulletins to the central Board of Health. It appears that, as one of the principal features of the malady is violent alvine ejections, they have thought proper to take under their surveillance all the cases of diarrhoea that occur in the town; and if they mean simple diarrhoea, we are very suspicious that they will not get exact information as to the number of sufferers; and what can be the use of an imperfect list, or indeed of any list at all, that has no reference to the malady whose progress they are sent to observe?

It has also been thought proper to make a distinction of common from malignant cholera. Is this a distinction of maladies, or a difference of symptoms of the same disease in different persons? Or is Dr. Daun's tabular view a gradation of the positive, comparative, and superlative degrees of intensity of the same malady? There are surely a great number of cases of common cholera at Sunderland co-existing with a malignant disease of the same kind, and that at the same period. Is this common cholera distinguished by the presence of bile, or by the absence of the congestion of the heart and lungs, and characterised by increase of temperature instead of diminution? Upon these questions will depend some curious facts in the history of the progress and varying characters of the pestilential cholera, which time will soon disrobe of their mystery. But at the present period certainly no details or facts should be withheld from the public which might give, if only to some, the security of anticipation, while others waited for the often-times dearly bought results of experience.

SKETCHES OF SOCIETY.

THE SIN OF PUNNING.

SIR,—I have for some years been a subscriber to, and reader of, your excellent journal; and, until last Saturday week, have always been delighted with the talent, learning, and research it has contained; but, sir, you were guilty of a pun—at least so I am informed, for I do not yet understand what joke there can be in saying, "Enter a fire, exit a theatre." Now, sir, as Dr. Johnson says, you may make a pun, but I say you shall not pick a pocket—at least, not mine. I am a country gentleman, with no cares except a young nephew, heir to a title and my fortune. He, sir, is a wag—a punster: more than a dozen times I have driven him from my house for his joking propensities; indeed, I believe he was the author of that sad trash you inserted in your paper of the 5th. I have been obliged to give up shooting, because every day I went out he indulged my friends with a joke, in which—not that I see any point in it—he asked whose guns they admired most—Manton's, Richard's, Lancaster's, or Egg's? Each chose their man: he said, there could be no doubt Eggs were the best for poaching*—now, why, I am at a loss to know. He calls his "Eggstatic thoughts." At table I dispense with port wine, because he either calls it the "Sublime Porte," or abuses it, and says, "any port in a storm." Turkeys I have forbid, on account of his calling them "Turkey in Grease." He calls the Sunderland complaint, the Colliery Morbus—London Bridge, Pons Asinorum, because it was opened under Sir Don Key's auspices. He annoys me by asking at the pastry-cook's for *speculum via*—a glass of whey. He tells me, that eighteen in French is like an old coat turned—*parce qu'il est deux fois neuf*—at least, so he says. He tells me, the height of folly is to eat pea-soup with a pin, or bolt your door with a boiled carrot. In the last frost, when Dr. Hawes was a great surgeon, he wrote what he called an epigram—

"Perpetual freezings and perpetual thaws,
Though bad for *hips*, are good for *Hawes*."

He has told me he can make a monosyllable of

* Apocryph—"By permission,"—our bard was so pleased with this fancy, that he persisted in putting it into rhyme—

Come, tell me, Lord W., whose guns you admire—
Joe Manton's self-primer, or Egg's ready fire?
Why, really, since now my opinion you're broaching,
I decidedly think Eggs better for poaching.

tea-pot; and he says *p-o-t, t pot*. He writes odes to winter, beginning, "All hail!"—odes in skittle-grounds, beginning, "Descend, ye nine!" In short, he enters into what he calls the *Punic* war every day. Now, sir, with this nephew, who says he not only knows his uncle, but also his *hunts*, I am quite bored; I am, as my nephew calls it, like the Thames at Rotherhithe—*greatly bored*. I wish to put down his puns—he says they are worth putting down.* But, sir, if you continue to joke, pray discontinue to send me your paper. I hear you are establishing a Garrick Club—if my nephew and your punster are not members, you may insert the name of your obedient servant,

PITT WILLIAMS.

DRAMA.

DRURY LANE.

ON Monday, after the performance of the *Exile*, in which Macready displayed great talent and spirit in his personation of a character every way beneath him, a new piece was produced, for the first time, called the *Days of Athens*. The bills described it as a *mirror of history and science*; and as we know not by what name of our own to call it, we may even let that pass for its proper title. As far as we could judge, it appears to have been the intention of the author to give a series of detached scenes or pictures, and these were represented on an inner stage, something similar to that which is used by the players in Hamlet, when they enact the *Mouse-Trap* before the court of Denmark. Where Mr. Ducrow was himself concerned (only as an actor we mean), every thing was done that could gratify the most fastidious. His personations were all classically correct, and many of his attitudes were extremely beautiful; but for the different changes of scene and dress considerable delay was requisite; and the pauses, tedious enough in themselves, were made doubly irksome by the introduction of a vast number of verses of the true bellman cut, that were delivered with an abundance of false emphasis by Mr. Gomersal, from Astley's: indeed, after listening for an hour to this venerable gentleman, who is called the

† We are half ashamed of the antiquity of some of these jokes, but they may mix up very well with those of a newer sort; and we find it likely that the *Garrick Club*, when in full operation (for which its house is now fitting up with all haste, and the list of original subscribers filling up rapidly), is likely to be the scene and source of much wit and pleasantry—since we picked up some of the following at mere by- corners, where a few of its members happened to congregate.

Irish Logic.—An Irish gentleman walked into the City the other day, recommended to a bill-broker, for a discount. The broker looked at the acceptance, and, as usual, started some difficulties. "It has (he said) a great many days to run, as you see, sir." "That's very true," replied Pat; "but I beg you to observe that they are the shortest days in the year."

One dramatic writer remarked, that the only difference between Ducrow's autumn and winter was, that the one was all sickles, the other icicles. What a pun for a sickly season!

A kitchen maid of the name of Elizabeth Sky applied for employment. What could be done with a sky in the kitchen? Such a light would shew better in the attic, said one. True, said another; but even below she might sky a copper.

A late pseudo-fashionable man upon town was heard to declare, that he never liked to ask for *blancmange*, because he did not know the name of it in French!

Mr. —, a clergyman, was mentioned as being extremely willing at all times to devolve his clerical functions upon any deputies who would undertake them. "Why is he like England, then?" asked a conundrumist: "give it up! He expects every man to do his duty."

C.—, it was related, had made a fortune by sheep-stealing, transporting the animals to the continent, and improving our neighbours' fleeces by fleecing us at home. To accomplish this, he would be out in the worst nights of winter, in a boat off the coast. "It must have been severe work," remarked an innocent. "By no means," was the reply; "you know, he could always choose his own weather."

Sage of Athens, we must confess that our ideas of Athenian wisdom are of a very humble kind; for more nonsense in the same space of time has rarely been inflicted on us even within the walls of a theatre. The scenes and dresses were very picturesque; and the machinery, with the exception of the swan and some of the singing birds, well contrived; but the construction of the thing was so bad, and the whole affair so uninteresting, that the audience became impatient, and at the fall of the curtain there were as many *noes* as *ayes*. It was repeated on the following night, for the second and last time.

We beg again to protest against the late hours to which the theatres extend their performances. On Monday night it was a quarter past eleven before the termination of the *Days of Athens*; and *Hyder Ali*, the longest of melodramas, was then to follow. This, we know from experience, is annoying to the audience, and we cannot conceive that it can be advantageous to the proprietor.

COVENT GARDEN.

On Thursday a new farce, by Kenny, called the *Irish Ambassador*, was performed at this theatre. It is a satire upon the intricacies of diplomacy; but the incidents being few in number, and those few not remarkably ludicrous, and the dialogue not having much point or piquancy to recommend it, we do not anticipate that it will live beyond a third, or a sixth night at the utmost. The principal part (indeed the only one of any prominence) is in the hands of Mr. Power; and although he bustles through it with great animation, yet there is a something about his manners and appearance which does not come up to our notion of the Irish gentleman—the baronet of high life—who is deputed by the ladies of Almack's to travel in search of patterns for fancy-ball dresses. The *Irish Ambassador* is what is called a *dress farce*, and of foreign extraction, being founded on *le Diplomate*.

The young lady announced at this theatre as a pupil of Tom Welsh, is a Miss Shireff. Report speaks highly of her great powers as a singer. She is, we believe, to open in *Mandane*; and some go so far as to assert that she is likely to raise once more the drooping fortunes of this devoted theatre.

VARIETIES.

Druidical Remains.—A few days ago Mr. Cole, of Scarborough, discovered, in the vicinity of the village of Cloughton, a Druidical circle, near to the one pointed out by John Wharton, Esq. a few years ago. It is about twelve yards in diameter, having the altar-stone remaining, and is in a direction bearing N.N.E. from the Wharton circle. Its site is in a vale, called Hulley's Slack, and near it flows a clear spring of water. It is bounded by the plantation denominated Lind Ridge, or Rigs, on the opposite elevation. — *York Herald*.

New Volcanic Island of Sciocca.—In Loudon's Magazine of Natural History for November, there is an account of the volcanic island of Sciocca, in which the author advances the opinion, supported by mineralogical facts, and the appearances presented in a sketch which accompanies the essay, that the island is permanent in its structure, and further, that it is a crater of elevation and not of eruption. This fact is now set at rest by some details published in the *Standard* of the 12th of November, and which are part of a letter of a Lieutenant in the French navy to Admiral Hugon. "It appears," the author says, "that the volcano, before it

made its explosion, had raised up the rocky crust by which it was surrounded, and it has left behind it the long train of land which it had drawn up." This statement is founded on a careful examination of the island and its neighbourhood. It does not appear to have increased much in size since the last accounts.

Bad Water.—Mr. Wright, whose exertions have heretofore been so zealously and usefully devoted to the improvement of the water supplied for the consumption of the northern parts of the metropolis, has again bestirred himself to obtain attention to the wants of the borough of Southwark with regard to this great necessary of life. In Southwark seven thousand families, it appears, have their water from that very part of the Thames where the large common sewers discharge their noxious and disgusting contents. No doubt the board of health at this crisis, the inhabitants, and the government, will look into this dangerous and abominable practice, with a view to its remedy.

Medal of William Roscoe.—A handsome medal of this distinguished individual has been executed by Mr. Scipio Clint, in a manner highly creditable to the artist. On the obverse is the head of the late historian of the House of Medici, with the simple inscription, *William Roscoe*. The likeness is excellent. On the reverse is a laurel-tree, surrounded by the motto "*Stassi il lavro lieto*;" and below, "*Born MDCCCLIII.—died MDCCCXXXI.*"

Queen Matilda.—A French antiquary, who lately visited the ruins of the once magnificent Monastery of Saint-Evroult, in Normandy, states, that he observed, over an oak door, the words, (we transcribe them literally),

*Matilda regina uxor Guillelmi conquestoris regis anglorū
Et ducis Normannorum utrum veniit, fratribusque, datis
Sumptibus, lapideum tricorium ubi und refrigerant construi
Precepit, anno 1081, ubi Melinero abbate.*

On inquiry, however, he found that the apartment had been, not a refectory, but a library. It appears, therefore, that Matilda's *tricorium* was an allegorical establishment, — a place devoted to the nourishment of the mind. It is extraordinary that an illiterate princess should have entertained so elevated an idea in an age of barbarism.

Highland Scenery.—An extensive pictorial and trigonometrical survey of the highlands and islands of Scotland has been commenced this year by Lieutenant-Colonel Murray, of Ochertyre, who has already traversed a large portion of the west highlands, and enriched his portfolio with many sketches of scenery, hitherto unexplored, of the most interesting and uncommon character. These sketches have been taken in outline, with all the fidelity which the aid of the finest instruments could give to an eye and hand long practised in military drawing: and arrangements, we understand, have been made with Mr. Morison, secretary to the Literary and Antiquarian Society of Perth, for their publication, with notes, in a form and at such periods as to conduce to their general circulation. If the fac-similes of drawings so correctly taken be well executed, and if the notes contain, not mere descriptions of the face of the country, but geological references to the sketches, and well-selected historical memoranda, we are satisfied that neither of these gentlemen will have cause to regret the time and labour bestowed on the elucidation of the picturesque scenery of their native country.

Rum Light.—It is stated in an American paper, that a process has been invented by which rum is converted into gas, which affords a clear and brilliant light.

Demolition!—A mountain in Switzerland called *Le Gelehrdsberg*, is on the point of crumbling to pieces. During the last immense masses of rock have detached themselves from it, and are constantly falling, with a tremendous crash, into the lake of Bregenz. It seems that even nature herself has her seasons of uproar and commotion.—*Figaro*.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLVI. 5s. 2.]

Mr. F. Arundel, a young architect, who has been pursuing his studies in Italy, announces a work in the Edifices of Palladio, consisting of plans, sections, elevations, with details of his most admired buildings from drawings and measurements taken at Vicenza by the Author.

Select Essays on various Topics, Religious and Moral, by Henry Belgrave, D.D.

Mr. R. Hanway is preparing a History of the Representation of England, drawn from Records; and of a Reform of its Abuse by the House of Commons not without the aid of the Statute Law.

Luther's Table-Talk.
A Refutation of the Calumnious Reports set on foot by the followers of the Rev. Edward Irving, respecting the Unknown Tongue.

In Nos. Picturesque Memorials of Salisbury; a Set of Etchings and Vignettes, from Drawings by a young Artist, and comprising Views of interesting Buildings and other Remains of Antiquity in that City and Neighbourhood: edited, with Descriptive Notices, by the Rev. Peter Hall, M.A. Curate of St. Edmund's, Sarum.

The principal memoirs in the ensuing volume of the Annual Biography and Obituary, will, we are informed, be those of Sir R. C. Spencer—H. Mackenzie—Brigadier General Walker—Elliston—Sir W. J. Hope—Admiral Parkin—Lord Torrington—Jackson, the R.A.—Mr. Abernethy—Mrs. Siddons—Sir E. Barry—Dr. Macleay—Rev. Robert Hall—Sir Murray Maxwell—The Hon. Earl of Dundonald—Carrington—Sir James York-Roscoe—Andrew Strachan—Northcote—Lord Nelson.

Observations during a Twelve Year's Residence in Mussulman's Family in India; descriptive of Domestic Life, by Mrs. Meer Hassan Ali.

LIST OF NEW BOOKS.

Gooch's Compendium of Midwifery, 12mo. 1s. 6d.
Turton's British Shells, coloured plates, 12mo. 1s. 6d. cloth.
Stapleton's Life of Canning, 2d edition, 5s. 6d.
Svo. 11. 18s. 6d.; Additions to the 1st edition, 5s. 6d.
Amesbury's Practical Remarks on Fractures, 12mo. 11. 6s. 6d.
Village Rhymes, 12mo. 4s. 6d. cloth.
The Well-thought in Affliction, 18mo. 3s. 6d. cloth.
Marshall Hall on the Circulation, Svo. plates 9s. 6d.
The Child's Annual, 12mo. 8s. 6d. half-bound.
Sever's Visit to the South Seas, 3 vols. Svo. 21s. 6d.
Madame de la Duchesse d'Albion, 2 vols. 8vo. 11s. 6d.
Wardlaw on the Sabbath, 12mo. 4s. 6d. half-bound.
Offering, a Musical Annual for 1832, 9s. 6d. half-bound.
deau, a Musical Annual for 1832, 12s. 6d. half-bound.
The Text of Bekker, Svo. 14s. 6d. half-bound.
Important Considerations, with Notes by Rev. J. Mansel, 12mo. 3s. 6d. cloth.
Cavendish, or the Patriarch, 3 vols. Svo. 11. 11s. 6d. half-bound.
The Town and the Country, 12mo. 4s. 6d. half-bound.

Rain fallen, .325 of an inch.
Edmonton. CHARLES H. ADAMS.

TO CORRESPONDENTS.

To correct one's own error, however trifling, is a sure. In our last, while truly placing a correspondence in the right, we, by accidentally transposing the names, fell into the mistake of saying that Miss E. True played in Bromley, and Miss Taylor Mrs. Simpson, instead of the reverse. We were only intent on stating that these actresses did perform, and not Mrs. Gibbs, as our correspondent insisted.

H. C. W. is declined.
An influx of new publications this week has obliged us rather to introduce than fully to notice those which Review embraces; others are necessarily postponed together, including Cavendish, a highly political, and the Catechism of Health, a very opportune little treatise, in a very popular form.—Stewart's Travels in the Pacific Ocean, &c. Various articles belonging to the divisions of our Gazette, and particularly the same department, are also deferred.

ADVERTISEMENT,

Connected with Literature and the Arts.

TO ARTISTS, ARCHITECTS, and DRAFTSMEN.

The utmost attention has been given to the Manufacture of Drawing Pencils in Cedar by S. Mordan and Co., who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing those objections and annoyances so frequently complained of in Drawing Pencils. All who wish to be satisfied as to the genuineness of these Pencils, may see them manufactured at No. 29, Castle Street, Pinbury, which establishment now has the honour, exclusively, to supply all the Government Offices.

Sold retail by all respectable Stationers, &c. throughout the United Kingdom. S. Mordan and Co.'s name is on each Pencil.

Just published, by Dickenson, Bond Street,

A LITHOGRAPHIC PRINT, by H. W. Burgess, after an original Picture by the late Sir George Beaumont, Bart. in the Collection of Sir Robert Frankland, Bart. Price 10s. Sold by the Artist, 124, Sloane Street; and by the Publisher.

BOOKS PUBLISHED THIS DAY.

Walker's Dictionary in Miniature. In 1 most beautifully printed pocket volume, price 5s. boards, 6s. bound in roan, or 6s. 6d. in Turkey morocco.

WALKER'S PRONOUNCING DICTIONARY, and *Expositor of the English Language*, in which the Meaning of every Word is clearly explained, and the Sound of every Syllable distinctly shown; exhibiting the Principles of a pure and correct Pronunciation; to which are prefixed, Rules to be observed by the Native of Ireland, Scotland, and London, for avoiding their respective Peculiarities of Speech; and Directions to Foreigners for acquiring a Knowledge of this Dictionary. A new edition, carefully revised and corrected.

By R. A. DAVENPORT, Author of the "Biographical Dictionary," &c. Chiswick: Printed by C. Whittington, 40, Tottenham Tegg, Cheapside; and sold by R. Griffin and Co.; and all other Book-sellers. 6s. Full Allowance to Schools.

III.
The Military Sketch-Book. Reminiscences of Seventeen Years in the Service, Abroad and at Home. By an Officer of the Line. A new edition, with considerable Additions, in 2 vols. post 8vo. 16s.

In 4 vols. 8vo. with Plates, 21. 16s.

THE CROMWELLIAN DIARY. The Diary of Thomas Burton, Esq. Member in the Parliaments of the Protector Oliver and Richard Cromwell, from 1656 to 1659, now first published from the original Autograph Manuscript; with Notices, Historical and Biographical, by the Editor. "This work serves to fill up that chasm so long existing in our parliamentary history."—*Literary Gazette*.

"The great interest of the book is Cromwell himself."—*Gentleman's Magazine*.
"These volumes overflow with information respecting the principles and proceedings of the legislature during a most important period of English history. Every library which pretends to contain an historical collection, must possess itself of Burton's Diary; it is as indispensable as Burnet or Clarendon."—*Atlas*. Henry Colburn and Richard Bentley, 5, New Burlington Street.

The Garrick Papers.—In 1 vol.
DAVID GARRICK'S PRIVATE CORRESPONDENCE with the most celebrated Persons of his Time, now first published from the Originals. This highly interesting and important work comprises upwards of Two Thousand Letters, from Persons of the greatest eminence in the Political, Literary, and Dramatic World. Among other Names, besides those of the leading Nobility, may be mentioned, Warburton—Burke—Johnson—Hume—Gibbon—Sir Joshua Reynolds—Goldsmith—Robertson—Junius—Beattie—Churchill—Mason—Cumberland—Boswell—Colman—T. and J. Warton—Dr. Burney—Sheridan—Murphy—Dr. Hooley—Mrs. Montagu—Mrs. Cowley, &c.

"When we consider the vast space that the first actor of ancient or modern times occupied, during his busy career, in the world's eye—when we remember that, from the first year of his appearance in London, in 1741, down to the moment of his retirement from the stage, in the year 1779, he was constantly before the public—that during this protracted period he was on terms of more or less intimacy with all the wise, the illustrious, the patriotic, of Great Britain—that he was the favourite of Dr. Johnson, the friend and companion of the celebrated Lord Camden, the associate of Quin and Foote, and Barry and Henderson, the protégé of Pope, the correspondent of Bishop Warburton, the fosterer of the early genius of Sheridan and Siddons;—when we remember all this, we can readily comprehend the interest that, even at this comparatively distant period, must be attached to the biography of such a man—the present volume, we repeat, will not disappoint such expectation. It is introduced by a well-written memoir of Garrick, and contains his voluminous correspondence with all, or nearly so, the illustrious characters of his time. The letters of Bishop Warburton, in particular, are uncommonly entertaining and clear upon many points in the great actor's life hitherto obscure and unexplained."—*Sun*.
Henry Colburn and Richard Bentley, New Burlington Street.

In 4 large vols. 8vo. price 21. 2s. boards, the 3d edition, revised and corrected, of

A NEW ANALYSIS OF CHRONOLOGY and GEOGRAPHY, HISTORY and PROPHECY, in which their Elements are attempted to be Explained, Harmonized, and Vindicated, upon Scriptural and Scientific Principles, ensuring the Impartiality and Disconnection of preceding Systems, and to obviate the Cavils of Sceptics, Jews, and Infidels. By the late Rev. WILLIAM HALES, D.D. Rector of Killesandra, in Ireland, and formerly Fellow of Trinity College, and Professor of Oriental Languages in the University of Dublin. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In small 8vo. price 3s. boards, the 3d edition of
PRACTICAL REFLECTIONS on the ORDINATION SERVICES for Deacons and Priests in the United Church of England and Ireland. For the Use of Candidates for Orders, and of those who renew their Ordination Vows; and respectfully proposed as a Manual for Ministers of all ages. To which are added, appropriate Prayers for Clergymen, selected and original.

By JOHN BREWSTER, M.A. Rector of Eggescliffe, in the County of Durham. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London.

Also, by the same Author,
Lectures on the Acts of the Apostles. New edition, in 1 vol. 8vo. 14s.

Etiopie Church in India.
In 2 vols. 8vo. price 12s. 6d. boards, with a Portrait by Dean, and a Map.

THE LIFE of the Right Rev. T. FANSHAW MIDDLETON, D.D. late Lord Bishop of Calcutta. By the Rev. CHARLES WEBB LE BAS, M.A. Professor in the East India College, Hertfordshire, and late Fellow of Trinity College, Cambridge. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Dedicated to the Duke of Devonshire.
On the 1st Oct. was published, the 4th No. of
MEMOIRS of the BEAUTIES of the COURT of KING CHARLES II. By Mrs. JAMESON.

Embellished with Portraits by the most distinguished Artists, from the original Pictures in the Royal Gallery at Windsor and elsewhere; forming a splendid illustration of the Memoirs of Pepys, Swinburn, Clarendon, and other writers connected with that gay and interesting period.
Royal 4to. 51s.; imperial 4to. Proofs on India paper, 42s. each Number; and the whole work will be shortly completed in Five Numbers.

Independently of the great attractions of this publication as a work of art, its literary and historical interest will be found remarkable. It ought to be particularly noticed that these memoirs are written by a lady, and as a lady (in her feminine character) ought to write. Most of the women were amiable and interesting as well as beautiful, and connected with our political history, and with the noblest families of the present time; several have been effectually cleared from the aspersions cast on them, and placed in a new and interesting point of view.
Henry Colburn and Richard Bentley, New Burlington Street.

3d edition, enlarged, 8vo. price 10s. 6d. cloth.
INQUIRIES concerning the INTELLECTUAL POWERS, and the INVESTIGATION of TRUTH.

By JOHN ABERCROMBIE, M.D. Fellow of the Royal College of Physicians of Edinburgh, &c. and First Physician to His Majesty in Scotland. Edinburgh, Waugh and Innes; and Whitaker, Treacher, and Co. London.

Also, lately published, by the same Author, in 8vo. 3d edition, enlarged, 15s. boards,
Pathological and Practical Researches on Diseases of the Brain and Spinal Cord.

In 8vo. 3d edition, enlarged, 15s. boards,
Pathological and Practical Researches on Diseases of the Stomach, the Intestinal Canal, the Liver, and other Viscera of the Abdomen.

Important Works.
Printed for Longman, Rees, Orme, Brown, and Green.

TRADITIONS OF LANCASHIRE.

By J. ROBY, Esq. M.R.S.L.

The Works of William Paley, D.D.; with additional Sermons, &c. and a Life of the Author. By the Rev. Edmund Paley, M.A. Vicar of Easingwold. A new edition, 6 vols. 8vo. 21. 14s. boards.

By the same Author,
Sermons on Several Subjects. 8th edition, 10s. 6d. boards.

Sermons. By Ralph Wardlaw, D.D. Glasgow. 8vo. 15s. boards.

By the same Author,
Discourses on the Principal Parts of the Socinian Controversy. 8vo. 15s. boards. 4th edition, much enlarged.

The Principles of Christian Philosophy. By John Burns, M.D. &c. 3d edition, 12mo. 7s. boards.

Literary Recollections. By the Rev. R. Warner, F.A.S. 2 vols. 8vo. 25s. bds.

Social Life in England and France, from the French Revolution of 1789 to that of 1830. By the Editor of Madame du Deffand's Letters. 8vo. 7s. boards.

By the same Author,
A Comparative View of the Social Life of England and France, from the Restoration of Charles the Second to the French Revolution of 1789. 8vo. 15s. boards.

Substance of several Courses of Lectures on Music, read in the University of Oxford, and in the Metropolis. By William Croft, Mus. Doc., Prof. Mus. Oxon. Post 8vo. 7s. 6d. boards.

Lacon; or, Many Things in Few Words. By the Rev. C. C. Colton, late Fellow of King's College, Cambridge, and Vicar of Kew and Petersham. A new edition, 2 vols. 8vo. 14s. boards.

A Treatise on the Steam-Engine; Historical, Practical, and Descriptive. By John Fary, Engineer. 4to. 11. illustrated by numerous and copper-plate engraved by Wilson Lowry, from Drawings by Messrs. Fary. 5s. 5s. bds. Vol. II. is in the press.

The Ship-Master's Assistant, and Owner's Manual; containing general information necessary for Merchants, Owners, and Masters of Ships, Officers, &c. By David Steele, Esq. A new edition, brought down to August 1830. The Commercial Department, by Dr. Kelly, and the Legal Department by a Professional Gentleman. In 1 thick vol. closely printed, with Maps, Plates, &c. 81s. boards; or 22s. 6d. bound.

The Miscellaneous Prose Works of Sir Walter Scott, Bart. now first collected. 6 vols. 8vo. 21. 14s. boards.

The Medical Guide: for the Use of the Clergy, Heads of Families and Seminaries, and Junior Practitioners. By Richard Meade, M.D. &c. A new edition, being the 15th, considerably enlarged, 12s. boards.

Dr. Dibdin's Sunday Library, complete.
In 6 vols. small 8vo. with Six portraits of eminent Prelates, price 50s. in cloth.

THE SUNDAY LIBRARY; containing Sermons by the following distinguished Divines. With Notes, &c.

"A little library for a churchman, and a treasure for the pious among the laity."—*Literary Gazette*.
London: Longman, Rees, Orme, Brown, and Green.

Pateron Clark on the Teeth.
In 1 vol. 8vo. 3d edition, 7s. boards.

A NEW SYSTEM of TREATING the HUMAN TEETH, CURING TOOTHACHE, &c. By J. PATERSON CLARK, M.A. Dentist.

To be had of the Publishers, Longman and Co. Paternoster Row; of the Author, 8ackville Street, Finsbury.
"Of the many recent works on the structure, diseases, and management of the teeth, this is the most concise, yet comprehensive. It is written in a popular style, and contains simple directions for the preservation of the teeth, which require only to be known to be universally adopted."—*London Medical and Surgical Journal*.
"Altogether, we look upon this as a very important discovery, which medical men will treat with great regard, and the heads of families hail with delight."—*Literary Gazette*.

Interesting New Works.

MEMOIRS of the DUCHESS of ABRANTES.

Comprising her Recollections of the Life of General Junot, and of other celebrated persons attached to the fortunes of Napoleon. 6s. A few Copies may be had of the French edition, in 2 vols. 8vo. comprising the entire 4 vols. of the Paris edition, with Two Portraits, now first added.

II. Cavendish; or, the Patrician at Sea. In 3 vols. post 8vo.

III. A Visit to the South Seas, in the United States Ship Vincennes, in 1829 and 1830, comprising Scenes in Brazil, Peru, Manila, the Cape of Good Hope, St. Helena, &c. By C. B. Stewart, A.M. Chaplain in the United States Navy. In 3 vols. post 8vo.

IV. Alice Paulet. By the Author of "Sydenham." In 3 vols. post 8vo.

V. The Catechism of Health; or, Plain and Simple Rules for the Preservation of Health; to which are added, Facts on the Nature, Treatment, and Cure of Cholera. By A. B. Granville, M.D. F.R.S. &c. In a small vol. price 6s.

VI. The British Dominions in North America, including an Account of the Present State of Upper and Lower Canada. New Brunswick, Nova Scotia, the Islands of Newfoundland, Prince Edward, and Cape Breton. By Lieut.-Colonel Bouchette, Surveyor-General of Lower Canada. In 2 vols. With numerous Plates, Maps, &c.

VII. The Bravo. A Venetian Story. By the Author of the "Pilot." In 3 vols. post 8vo.

VIII. Memoirs of Female Sovereigns. By Mrs. Jameson. In 2 vols. post 8vo.
"This work is well calculated to be a great favourite with fair readers, whose sex it will so decidedly tend to elevate and glorify."—Morning Post.
Henry Colburn and Richard Bentley, New Burlington Street.

REMARKS on the GENERAL TENOUR of the NEW TESTAMENT regarding the NATURE and DIGNITY of JESUS CHRIST; addressed to Mrs. Joanna Baillie. To which is added, an Appendix on Sir Isaac Newton's Suppression of his Dissertation on 1 John v. 7, and 1 Tim. iii. 15; and on the Evidence of M.S. once extant at Venice, which contained the Controverted Verse of St. John.
By the BISHOP of SALISBURY.
Salisbury: W. B. Brodie and Co.; sold also by Messrs. Rivington; and Hatchard and Son, London.

In 18mo. 3d edition, enlarged, price 9s. boards.
SURE METHODS of IMPROVING HEALTH and PROLONGING LIFE, by regulating the Diet and Regimen. Embracing all the most approved principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, &c. in the Cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life. To which are added, an Account of the Art and excellent Effects of Training for Health, Rules for the Acquisition of Competence, and Maxims for the Bilious and Nervous, &c. Illustrated by Cases.
By T. J. GRAHAM, M.D. &c.
"We are disposed to think it the most useful and rational work of the kind we have met with. It contains many hints novel to us, and is altogether an admirable code of health."—Atlas, Sept. 1837.
"The tendency of this volume to advance the important objects which it proposes is unquestionable, and we warmly recommend it. It is intelligent, practical, and highly interesting."—New Literary Gazette, Sept. 1837.
"That men of all habits will derive information from it, calculated to increase their comfort and extend their days, is firmly our conviction."—Edinburgh Observer, Jan. 1838.
To this edition is attached an Appendix, containing a full Account of the Cholera, with the best Remedies, as ascertained by Physicians of the greatest experience in that fatal Disease.
London: Published by Simpkin and Marshall, Stationers' Court; sold by all Booksellers.

Of whom may be had,
Lately published, by the same Author, 2d edition, in 1 large vol. 8vo. price 16s. boards, with Engravings.
2. A Chemical Catechism, in which the Elements of Chemistry, with all the recent Discoveries, are very clearly and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufactures, and Medicine, described. Illustrated by Notes, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms.
"We esteem and recommend it. Every subject of interest connected with this delightful science is treated of in the clearest manner."—London Weekly Review, 21st Feb. 1839.
"Every thing is here written up to the latest date, and the work cannot fail, we think, of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parker's book."—Monthly Magazine, 1st March, 1839.
The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements to the compound and illustrative branches of the study. It is very superior to Parker's."—Atlas, 1st March, 1839.

In 1 vol. 8vo. price 12s. boards, a new edition, being the 9th, of CONSPICUUS MEDICINÆ THEORETICÆ AD USUM ACADEMICUM.
Auctore JACOBO GREGORY, M.D.
Olim Med. Theor. super Med. Pract. in Acad. Edin. Prof. Printed for Robert Cadell; MacLachlan and Stewart; Strirling and Kenney; and John Anderson, Jun. Edinburgh; and Baldwin and Cradock, London.

MRS. DALGAIN'S COOKERY, adapted to every-day Life. A new edition, 7s. 6d.
"We consider we have reason strongly to recommend Mrs. Dalgairn's as an economical, useful, and practical system of cookery, adapted to the wants of all families, from the tradesman to the country gentleman. It is not a gourmand's book, nor does it pretend to be; and though we shall not put away Russell and Kitchiner for Mrs. Dalgairn, she is far more copious than they are, far more various, and to us more novel."—Spectator, 13th June.
Published by Robert Cadell, Edinburgh; and Whittaker and Co. London.

Who have now published,
1. The Waverley Novels. New edit. royal 18mo. price 5s. each Vol. cloth boards. The Thirtieth Volume of which is published this day, containing the Conclusion of Fervor of the Peak. Illustrated by D. Wilkie and C. R. Leslie.

Annual Publications for 1832.
Under the Superintendence of the Society for the Diffusion of Useful Knowledge.
On Tuesday, Nov. 22nd, will be published,
THE BRITISH ALMANAC.—The British Almanac was originally published in 1823; and the success for such a publication has been confirmed by its very extensive sale, by the partial improvement that it has produced in the old Almanacs, and by the establishment of others upon a plan similar to its own. The peculiar character by which this Almanac is sought to be distinguished, is usefulness. The first requisite of a manual which is constantly consulted, is attention to the exclusion of every thing that can be injurious, and to the introduction of whatever is important; to be known for the guidance of the daily transactions of the community. It contains 78 closely printed pages, embracing a great variety of information, adapted for all parts of the United Kingdom. Price 2s. 6d. in a wrapper.

2. The Companion to the Almanac.—The Companion to the Almanac is not only a Supplement to the "British Almanac," but a work of universal reference upon all subjects arising out of the course of the seasons, or the events of the year. Its object is to condense into a small compass a great body of information, essential to be known by every member of the community. The contents of the Companion for 1832 will be wholly different from those of previous years. Price 2s. 6d. bound.

3. The British Almanac and Companion, neatly bound together, 6s.
"The Companions to the Almanac for 1829, 1830, and 1831, with a copious Index, may be had neatly bound together, price 1s. London: Published by Charles Knight, 15, Pall Mall East; and sold by all Booksellers.

LONDON: Published every Saturday, by W. A. SCRIPPS, of the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 13, South Molton Street, Oxford Street; also by J. Chapman, 96, Regent Exchange, E. Marlborough, Ave. Marie, and La Fayette Hill, A. Road, Edinburgh; Smith and Son, D. Robertson, and Stevenson and Co. Glasgow; and J. Cunningham, Dublin.—Agents for America, O. Rich, 18, Red Lion Square, London.
J. MOYES, 28, Castle Street, Leicester Square.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 775.

SATURDAY, NOVEMBER 26, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Romance and Reality. By L. E. L., author of "The Improvisatrice," &c. &c. 3 vols. 12mo. London, 1831. Colburn and Bentley.

The poetical productions under the initial *soubriquet* of L. E. L. having obtained very high celebrity while their writer was yet in the precincts of early girlhood; and, during the few years which have since elapsed, having extended her fame and popularity to the widest range of the English language, no slight degree of expectation has been naturally excited towards this her first effort in prose composition. The admirers of her poetry—and they are so numerous and ardent, that it may truly be said she has formed a new school in our poetic literature—are curious to see if the same genius will be thrown over the page of a novel; if it will possess the same exquisite tenderness; the same warmth of feeling combined with the same purity of female delicacy—the same fine perceptions of humanity linked with the same luxury of imagination—the same descriptive power, nature, and pathos, which have so greatly distinguished the fair *Improvisatrice*, and rendered her volumes the treasured favourites of the youthful of both sexes, whose spirits the world hath not deadened; while even those farther advanced in life have been charmed by their freshness and fancy, awakening in them the happiest, and still more frequently the most touching, dreams of by-gone days.

This problem is now before the public for solution; and so far as our opinion goes, it must be decided in a way which will much augment the reputation of the author. We think *Romance and Reality* a perfectly original specimen of fictitious narrative; there is no performance of the class, within our knowledge, which it resembles. It is also totally different from the writer's poetry, and displays altogether various faculties and powers hitherto undeveloped by her publications. In parts like works by preceding novelists, it is in its own form and combinations that it appears to us to stand alone: we question if L. E. L. herself could imitate it successfully.

The several kinds of novels which, with all their imperfections, shed a lustre over our literature, are chiefly these:—

The *Romantic*, in which the imaginative and descriptive prevail; the supernatural and extraordinary increase the intensity of the interest; and the characters are mixed of the ruthless and depraved, and of beings superior to the common race of the earth. Horace Walpole, Mrs. Radcliffe, Lewis, and others (since the times of Sidney's *Arcady*, and Mrs. Manley's *Atlantis*), adorn this order in our country.

The novel of *Common Life* has filled a large space amongst us, and possessed as many varieties as its widely spread and diversified subject. Fielding, Smollett, Goldsmith, Miss Burney, Miss Porters, Mrs. Inchbald, Dr. Moore, and a hundred others, have wrought in this exhaustless mine;—the qualifications required

being, a knowledge of human nature, of life, and society, and the capacity to draw clever and humorous pictures of all.

High Life and Fashionable novels may next be mentioned; from Richardson, whose scenes are laid among the upper circles, but yet laid with a profound acquaintance with the springs of the human heart, to the slip-slop senseless scribbles of the year 1831, who have a profound acquaintance with nothing. Where merit exists in performances of this sort, it must also be in a similar knowledge of human nature, which is necessary to depict the middle and lower orders, and in belonging to that station which enables the author to paint true pictures of life in the sphere to which they belong. Mr. E. L. Bulwer may be quoted as the most successful of our contemporaries in this line.

The *Satirical*, consisting of a keen perception of vices and follies, and a keen wit to lash and ridicule them.

The *Historical*, in which genius animates the past, and reinvests individuals recorded in distant annals with a new existence. Here Scott is the mighty master; but there are many worthy labourers in the same prolific vineyard.

It would be tedious to particularise and dwell upon the numerous species which may be referred to one or other of the foregoing genera, or to designate productions so peculiar as each to constitute, as it were, a genus *per se*. Of the latter, De Foe, Swift, and Sterne, furnish memorable examples; and of the former the divisions are as obvious as they are numerous. We have *Sentimental* novels, such as Mackenzie's; *Fairy* tales; *Philosophical* novels and *Political* novels, from Godwin to Ward; *Religious* novels, see Hannah More, &c.; *Moral and Instructive* novels, see Miss Edgeworth and others, whose lessons are so acutely drawn from and applied to real life; and we have also novels illustrative of *National* and *Foreign* manners:—some directly addressed to the passions by means of a concentrated narration of sufferings; and sundry other varieties, which will readily suggest themselves to the minds of our readers.

In *Romance and Reality* we have glimpses of most of the ingredients we have enumerated; and they are mingled together without a single artifice of practised novel-writing; without affording strong proof of the "organ of constructiveness." The story, it is true, proceeds in a very simple manner, and we hardly like it the less for its want of management; though perhaps the presence of that quality might have rendered it here and there more striking. But, without being strictly a historical, fashionable, sentimental, romantic, or common-life novel, this work possesses a portion of the highest merits of them all, and is especially separated from either by its own excellencies. Every character is true to nature: the reader has met the parties daily for the last ten years. There is a fineness and justness of observation, very unexpected to us from the former works of the

writer, which is quite alive to social peculiarities, and strikes them with a point so ingeniously, as to place common things and occurrences in new, curious, and pleasant lights. Then, beyond this, we find a store of deeper and more reflective mind, which overflows in a multitude of pithy maxims, which Rochefoucauld himself might be proud to own. Even in familiar life, the Poetess has chosen to evince her talent; and the Higges' family are illustrious specimens of cockney vulgarity. When we add, that we are moved with equal fidelity of delineation, not only from town to country, but to Spain and Italy, some idea may be formed of the great ability with which *Romance and Reality* abounds. It has only to confess to a few unimportant errors (the results of negligence, perhaps, or of the want of habit in long prose compositions), and to the still graver charge of introducing into a London evening party, and at the Athenæum Club *soirée*, &c. several individuals who may easily be recognised in actual life. This is not done ill-naturedly, but the thing itself is below the standard of the writer's genius; and we never can consent to forego the reprehension of these personal exhibitions. They strike at the root of social intercourse; for there are multitudes of people who utterly dislike to have their portraits, however flatteringly limned, made public.

It is now our pleasing task to convey some notion of this book to our readers, without unfolding the mysteries and *dénouement* of the story,—an offence not to be forgiven. We shall therefore select only detached parts; and commence with a very touching death-scene—that of the loved uncle of Emily.

"Mr. Arundel had lain down some time. Mrs. Arundel remained in the parlour with the medical and legal ladies—she for news, they for luncheon—while Emily stole softly to her uncle's room. Though the light fell full on his face, he was asleep—a calm, beautiful, renovating sleep—and Emily sat down by the bedside. The love which bends over the sleeping is, save in its sorrow, like the love which bends over the dead—so deep, so solemn! Suddenly he opened his eyes, but without any thing of the starting return to consciousness with which people generally awake—perhaps her appearance harmonised with his dream. Without speaking, but with a look of extreme fondness, he took her hand, and, still holding it, slept again. Emily felt the clasp tighten and tighten, till the rigidity was almost painful: she had drawn the curtains, lest the sun, now come round to that side of the house, should shine too powerfully; a strange awe stole over her in the gloom; she could scarcely, in its present position, discern her uncle's face, and she feared to move. The grasp grew tighter, but the hand that held hers colder; his breathing had all along been low, but now it was inaudible. Gently she bent her face over his; unintentionally—for she dreaded to awaken him—her lips touched his; there was no breath to be either heard or felt, and the

mouth was like ice. With a sudden, a desperate effort, she freed her hand, from which her uncle's instantly dropped on the bedside, with a noise, alight indeed, but, to her ears, like thunder; she flung open the curtains—again the light came full into the room—and looked on a face which both those who have not, and those who have before seen, alike know to be the face of death.

"Deep as may be the regret, though the lost be the dearest, nay, the only tie that binds to earth, never did the most passionate grief give way to its emotion in the presence of the dead. Awe is stronger than sorrow: there is a calm, which, though we do not share, we dare not disturb: the chill of the grave is around them and us.—I have heard of the beauty of the dead: it existed in none that I have seen. The unnatural blue tinge which predominates in the skin and lips; the eyes closed, but so evidently not in sleep—in rigidity, not repose; the set features, stern almost to reproof; the contraction, the drawn shrunk look about the nose and mouth; the ghastly thin hands,—Life, the animator, the beautifier—the marvel is not, how thou couldst depart, but how ever thou couldst animate this strange and fearful tenement. Is there one who has not at some time or other bent down—with that terrible mingling of affection and loathing impulse, each equally natural, each equally beyond our control—bent down to kiss the face of the dead? and who can ever forget the indefinable horror of that touch?—the coldness of snow, the hardness of marble felt in the depth of winter, are nothing to the chill which runs through the veins from the cold hard cheek, which yields no more to our touch: icy and immovable, it seems to repulse the caress in which it no longer has part. Emily strove to pray; but her thoughts wandered in spite of every effort. Prayers for the dead we know are in vain; and prayers for ourselves seem so selfish. The first period is one of such mental confusion—fear, awe, grief, blending and confounding each other; we are, as it were, stunned by a great blow. Prayers and tears come afterwards."

We now extract a few specimens of the innumerable traits of character, &c.

"Her father had been the youngest brother, and, like many other younger brothers, both unnecessary and imprudent; a captain in a dragon regiment, who spent his allowance on his person, and his pay on his horse."

"Mrs. Arundel was as thoroughly satisfied as either, perhaps more so, for she was satisfied with herself—a supper, sleeping, and breakfast, got through without a blunder; so to her housekeeper she went 'in her glory.'"

"Affection is more matter of habit than sentiment, more so than we like to admit; and she was leaving both habits and affections behind. There were the servants gathered in the hall, with proper farewell faces; her aunt, hitherto busy in seeing the carriage duly crammed with sandwiches and sweetmeats, having nothing more to do, began to weep. A white handkerchief is a signal of distress always answered; and when Mr. Arundel took his place beside his niece, he had nothing but the vague and usual consolation of, 'Love, pray don't cry so,' to offer for the first stage."

"There is something very amusing in the misfortunes of others. However,—to borrow an established phrase from those worthy little volumes, entitled the Clergyman's, Officer's, and Merchant's Widows, when the disconsolate relict is recalled from weeping over the dear departed, by the paramount necessity of getting one of her fourteen children into the

Blue-coat School,—'the exertion did her good.'"

"Now came one of these audible pauses, the tickings of the death-watch of English conversation. This was broken by Mrs. Ferguson's asking a question. How many are asked for want of something to say! The questions of curiosity are few to those of politeness."

"His was a character full of great and glorious elements, but dangerous; so alive to external impressions, so full of self-deceit—for what deceives us as we deceive ourselves? To what might not some dazzling dream of honour or of love lead? It was one that required to be subdued by time, checked by obstacles, and softened by sorrow; afterwards to be acted upon by some high and sufficient motive to call its energies into action—and then, of such stuff nature makes her noblest and best. As yet his life had, like that of the cuckoo, known

'No sorrow in its song,
No winter in its year.'

His beauty had charmed even his stately lady-mother into softness; and he was the only being now on earth whom his brother loved. Young, noble, rich, gifted with that indefinable grace which, like the fascination of the serpent, draws all within its circle, but not for such fatal purpose—with a temper almost womanly in its affectionate sweetness—with those bold buoyant spirits that make their own eagles-wings,—what did Edward de Lorraine want in this world but a few difficulties and a little misfortune?"

Music.—"By the by, both in print and parlance, how much nonsense is set forth touching 'the English having no soul for music!' The love of music, like a continent, may be divided into two parts; first, that scientific appreciation which depends on natural organisation and highly cultivated taste; and, secondly, that love of sweet sounds, for the sake of the associations linked with them, and the feelings they waken from the depths of memory: the latter is a higher love than the former, and in the first only are we English deficient. The man who stands listening to even a barrel-organ, because it repeats the tones 'he loved from the lips of his nurse'—or who follows a common ballad-singer, because her song is familiar in its sweetness, or linked with touching words, or hallowed by the remembrance of some other and dearest voice—surely that man has a thousand times more 'soul for music' than he who raves about execution, chromatic runs, semi-tones, &c. We would liken music to Aladdin's lamp—worthless in itself, not so for the spirits which obey its call. We love it for the buried hopes, the garnered memories, the tender feelings, it can summon with a touch."

"Lord Lauriston was one of those mistakes which sometimes fall out between nature and fortune,—nature meant him for a farmer, fortune made him a peer. In society he was a nonentity; he neither talked nor listened—and it is a positive duty to do one or the other: in his own house he resembled one of the old family pictures, hung up for show, and not for use; but in his farm no Cæsar rebuked his genius. Heavens! what attention he bestowed on the growth of his gray peas! how eloquent he could be on the merits of Swedish turnips! and a new drill, or a patent thrashing machine, deprived him of sleep for a week."

"Let Lord Byron say what he will of bread and butter, girlhood is a beautiful season, and its love—its warm uncalculating, devoted love—so exaggarating in its simplicity—so keen from its freshness—is the very poetry of attachment: after-years have nothing like it.

To know that the love which once seemed eternal can have an end, destroys its immortality; and thus brought to a level with the beginnings and endings—the chances and changes of life's common-place employments and pleasures—and, alas! from the sublime to the ridiculous there is but a step—our divinity turns out an idol—we are grown too wise, too worldly, for our former faith—and we laugh at what we wept at before; such laughter is more bitter—a thousand times more bitter—than tears."

Talking of the English characteristic—grumbling—

"Our national safety-valve: a Frenchman throws his discontent into an epigram, and is happy—an Englishman vents his on the weather, and is satisfied. Heaven help our minister through a fine summer! it would inevitably cost him his place; for our English grumbling is equally distributed between the weather and politics, and the case would be desperate when confined to the last."

"There are many odd things in society; but its amusements are the oddest of all. Take any crowded party you will, and I doubt if there are ten persons in the room who are really pleased. To do as others do, is the mania of the day. I will tell you a story. Once upon a time a lady died much regretted; for she was as kind-hearted an individual as ever gave birth-day presents in her life, or left legacies to her death. When they heard the intelligence, the whole of a married daughter's family were in great distress,—the mother cried bitterly, so did her two eldest daughters, as fitting and proper to do. The youngest child of all, a little creature who could not in the least recollect its grandmother, nevertheless retired into a corner, and threw its pinafore over its face. 'Poor dear feeling little creature!' said the nurse, 'don't you cry too.' 'I'm not crying,' replied the child; 'I only pretend.' Regret and enjoyment are much the same; people are like the child,—they only pretend."

"Sleep is a true pleasure, if one had not to get up in the morning. Do not tell me of the happiness of life, when every day begins with a struggle and a sacrifice. To get up in the morning, both in the enjoyment it resigns and the resolution it requires, is an act of heroism."

"The truth is, Lord Melton was, simply, naturally and intensely selfish: he was himself 'the ocean of his thoughts'; he never considered the comfort of other people, because he never looked at it as distinct from his own; and the most romantic devotion, the most self-denying love, would have seemed, if he were the object of it, as quite in the common course of things. This is a common character, which age alone develops into deformity. Youth like charity, covers a multitude of sins; but Heaven help the wife, children, servants, and all other pieces of domestic property, who such a man is fifty, and has the gout!"

"The innocence of the country is very real like its health—a sort of refuge for the devotee: the poet talks of its innocence, from not knowing where else to place it—and the physician of its health, sending thither his incurable patients, that they may at least not die under his hands."

"An obstinate temper is very disagreeable particularly in a wife; a passionate one very shocking in a child; but, for one's own particular comfort, Heaven help the possessor of an irresolute one! Its day of hesitation—its night of repentance—the mischief it does—the miseries it feels!—its proprietor may well ex-

claim, 'Nobody can tell what I suffer but myself!'

We must contrast these with one of the scenes in which the Higgs' flourish: it occurs on board a packet.

"But their chief attention was attracted by a family group. The father, a little fat man, with that air of small importance which says, 'I'm well to do in the world—I've made my money myself—I don't care if I do spend some—it's a poor heart what never rejoices.' The mother was crimson in countenance and pelisse, and her ample dimensions spoke years of peace and plenteousness. Every thing about her was, as she would have said, of the best; and careful attention was she giving to the safety of a huge hamper that had been deposited on deck. Two daughters followed, who looked as if they had just stepped out of the Royal Lady's Magazine—that is, the prevailing fashion exaggerated into caricature. Their bonnets were like Dominie Samson's ejaculation, 'prodigious!'—their sleeves enormous—their waists had evidently undergone the torture of the thumb-screw—indeed they were even smaller—and their skirts had 'ample verge and space enough' to admit of a doubt whether the latitude of their figure did not considerably exceed the longitude. Two small, mean-looking young men followed, whose appearance quite set the question at rest, that nature never intended the whole human race to be gentlemen. Blue-coated, brass-buttoned, there was nothing to remark in the appearance of either, excepting that, though the face of the one bore every indication of robust health, his head had been recently shaved, as if for a fever, which unlucky disclosure was made by a rope coming in awkward contact with his hat. The wind was fair; and Lord Mandeville having gone to the head of the vessel, where he was engaged in conversation, Emily was left to watch the shore of France, to which they were rapidly approaching, when her meditations were interrupted by a coarse but good-humoured voice saying, 'I wish, miss, you would find me a corner on them there nice soft cushions—my old bones aches with them benches.' Emily, with that best politeness of youth which shews attention to age, immediately made room in the carriage for the petitioner, who turned out to be her of the crimson pelisse. 'Monstrous pleasant seat,' said the visitor, expanding across one side of the carriage. Emily bowed in silence; but the vulgar are always the communicative, and her companion was soon deep in all their family history. 'That's my husband, Mr. H.: our name is Higgs, but I call him Mr. H. for shortness. Waste makes want, you know—we should not be here pleasuring if we had ever wasted. And those are my sons: the eldest is a great traveller—I dare say you have heard of him—Lord bless you! there isn't a bill in Europe, to say nothing of that at Greenwich, that he hasn't been up: you see he is a stout little fellow. Look, miss, at this box—it is made of the *lather* of Vesuvius, which he brought from Mont Blanc: he has been up to the very top of it, miss. I keep it for *domestiques*.' So saying, she offered Emily some of the peppermint-drops it contained: these were civilly declined, and the box good-naturedly admired, which encouraged—though, Heaven knows, there was not much need—the old lady to proceed. 'We always travel in the summer or improvement—both Mr. H. and I think a deal of learning: the boys have both been to grammar schools, and their two brothers are at the London University—only think, miss, of our city having a university—Lord, Lord, but

we do live in clever times.' Mrs. H. paused for a moment, as if overwhelmed with the glories of the London University; and conversation was renewed by Emily's inquiring 'what part of the Continent they intended visiting?' 'Oh, we are going to Italy—I want to see what's at the end of it; besides, the girls mean to buy such a quantity of pearls at Rome. We intend giving a fancy ball this winter—we have got a good house of our own in Fitzroy Square—we can afford to let the young ones see a little pleasure.' 'May I ask,' said Emily, 'what is Mr. Higgs' profession?' 'Indeed!' exclaimed his offended spouse, 'he's not one of your professing sort—he never says what he doesn't mean—his word's as good as his bond through St. Mary Within, any day—professions, indeed! what has he ever professed to you?' Emily took her most conciliating tone, and, as unwilling duellists say, the explanation was quite satisfactory. 'Bless your silly soul! his business you mean. You are just like my girls—I often tells them to run for the dictionary: to see the blessings of education! Our children are a deal more knowing than ourselves. But Mr. H.'s business—though I say it that shouldn't—there isn't a more thriving soap-boiler in the ward. Mr. H. wanted to go to Moscow for our summer *tower* (Moscow's the sea-port which sends us our tallow)—but I said, 'Lord, Mr. H., says I, what signifies making a toil of a pleasure?' 'You are,' said Emily, 'quite a family party.' 'I never lets Mr. H. leave me and the girls behind—no, share and share alike, says I—your wife has as good a right to go as yourself. I often tells him a bit of my mind in the old song—you know what it says for we women—that, when Adam was created,

'We wasn't took out of his feet, sir,
'That we might be trampled upon;
But we was took out of the side, sir,
'His equals and partners to be:
So you never need go for to think, sir,
'That you are the top of the tree.'

'Well,' replied Emily, 'I wish you much pleasure in Italy.' 'Ah, miss, it was my son there that put it in our noddles to go to Italy first. Do you see that his head's shaved?—it's all along of his taste for the fine arts. We've got his bust at home, and his hair was cut off to have his head and its bumps taken: they covered it all over with paste just like a pudding. Lord! his white face does look so queer in the front drawing-room—it's put on a marble pillar, just in the middle window—but, dear, I thought the people outside would like to see the great traveller.' "

But enough of this—it is merely a sample to shew the writer's talent in a new vein. Our next extract is a letter in a strain more likely to be looked for from her: we know nothing superior to it, and we wonder how any one not in the actual circumstances could ever have conceived so true a delineation of the last moments of a fair visionary, whose unreal hopes in life had perished before herself. "If you have not already forgotten my wilful, wayward, and ungrateful conduct, I am persuaded it will be forgiven when I tell you that I have suffered much both in mind and in body, and am now at home—but ill, very ill, and pining to see you, my kind, my almost only friend. The fatigue of writing is great, and I will enter into no details; but only tell you, that I have escaped from my convent, in company with, and by the assistance of, Beatrice de los Zoridos. She is with me now in England. Every event that has taken place you can learn from others—my feelings only from myself; and if I speak boldly on a subject which even now

brings the blood to my cheek, it is because you, and you only, know my secret, and because I would implore you to keep silence as sacredly as you would a trust from the dead—it will soon be one. The melancholy wind is sweeping through the old trees of our garden—I could fancy it filled with spirit-tones, which call me away. This is very fanciful; but what has my whole life been but a vain, false fancy? I tremble to recall the past—the gifts I have misused—the good things that have found me thankless—the obstinate will that has rejected content, unless that content were after its own fashion. Death sends Truth before as its messenger. In the loneliness of my sleepless midnight—in the feverish restlessness of days which lacked strength for pleasant and useful employment—how have I been forced on self-examination! and how have my own thoughts witnessed against me! Life—the sacred and the beautiful—how utterly have I wasted! for how much discontent and ingratitude am I responsible! I have been self-indulged from my childhood upwards—I have fretted with imaginary sorrows, and desired imaginary happiness; and when my heart beat with the feelings of womanhood, it set up a divinity, and its worship was idolatrous! Sinful it was to love as I loved Edward Lorraine; and truly it has had its reward. I loved him selfishly, engrossingly, to the exclusion of the hopes of Heaven, and the affections of earth. I knelt with the semblance of prayer—but an earthly image was the idol: I prayed but for him. I cared for no amusement—I grew disgusted with all occupation—I loved none else around me. I slept, and he was in my dreams—I awoke, and he was my very first thought. Too soon, and yet too late, I learnt to what a frail and foolish vision I had yielded. A storm of terrible passions swept over me. I loathed, I hated, my nearest friends. My shame amounted to madness: fear alone kept me from suicide. I repulsed the love that was yet mine—I disdained the many blessings that my lot still possessed—I forgot my religion, and outraged my God, by kneeling at a shrine which was not sacred to me, and taking vows in a faith I held to be false. A brain-fever kept me to my bed for some weeks: I hope and pray that its influence was upon me before. My hand trembles so that I can scarcely write. Beatrice came to the convent: our intercourse was permitted; and she was kind, gentle, affectionate, to me, as if she had been my sister. I cannot tell you how loving her softened my heart. At length I heard her history. She told me of trials and hardships that put my complainings to shame; and then I learnt that she was the beloved and betrothed of Edward Lorraine. I looked in her beautiful face, and then, strange as it may seem to say, hope, for the first time, wholly abandoned me. My love had been so dreaming, that my imagination, even in the convent, was always shaping out some improbable reunion. I was ill again. Beatrice watched me, soothed me, read to me from the little English Bible which she said had ever been, in her trying and lonely life, a friend and a support. Alas! my heart died within me to think what account I should render of the talent committed to my charge. I felt utterly lost and cast away. I prayed as one without hope—one who feels her sin is too great to be forgiven. But God tempers justice with mercy—a new life rose up within me. I said, even at the eleventh hour there is hope: I said, surely the Saviour of the world is mine also. I thought upon the grave to which I was hastening, and it seemed to me

peaceful as the bed of a child—"There the wicked cease from troubling, and there the weary are at rest." I repented me of my worldly delusions, and strove to fix my thoughts above. Had I earlier made religion the guide of my way, I might even now be fulfilling the duties I have neglected, and looking forward in patience and faith. But it is too late; the last of my house, I am perishing as a leaf to which spring has denied her life. I have longed to die at home—to hear once more the words of prayer in my native tongue; and wonderfully has my wish been granted, when expectation there was none! I shall sleep in the green churchyard where I first learnt that death was in this world—the soil will be familiar, and the air that of my home. I am one-and-twenty to-morrow. Would, O God! that my years had been so spent as to have been a worthier offering! But thy fear is the beginning of wisdom; and in that fear is my trust, that a broken and a contrite spirit thou wilt not despise.—Will you not, my dear and kind friend, come and see me? I shall be so happy, if I can once tell you, that, though the orphan for a moment forgot your kindness, its memory was not effaced. I have thought of you, and prayed for you. You will come, dear Lady Mandeville. I want you to know Beatrice. You will love her, and your kindness may benefit her. She will be more grateful than I have been. Will you not come to-morrow?—Yours, &c."

We have named Rochefoucauld—could he excel the following, taken almost at random?

"The course of life is like the child's game—'here we go round by the rule of contrary'—and youth, above all others, is the season of united opposites, with all its freshness and buoyancy."

"The attention of a superior is too flattering to our vanity not to call it forth."

"A great change in life is like a cold bath in winter—we all hesitate at the first plunge."

"Marriage is like money—seem to want it, and you never get it."

"Alas, for the vanity of human enjoyment! we grow weary of even our own perfection."

"What a foundation mortified vanity is for philosophy!"

"Attention is always pleasant in acquaintances till we tire of them."

"The ridiculous is memory's most adhesive plaster."

"The old proverb, applied to fire and water, may, with equal truth, be applied to the imagination—it is a good servant, but a bad master."

"The Janus of Love's year may have two faces, but they look only on each other."

"In the moral as in the physical world, the violent is never the lasting—the tree forced into unnatural luxuriance of blossom bears them and dies."

"Grief, after all, is like smoking in a damp country—what was at first a necessity becomes afterwards an indulgence."

"An apt quotation is like a lamp which flings its light over the whole sentence."

"The history of most lives may be briefly comprehended under three heads—our follies, our faults, and our misfortunes."

"There is nothing so easy as to be wise for others; a species of prodigality, by the by—for such wisdom is wholly wasted."

"Always be as witty as you can with your parting bow—your last speech is the one remembered."

"Nothing appears to me so absurd as placing our happiness in the opinion others entertain

of our enjoyments, not in our own sense of them. The fear of being thought vulgar, is the moral hydrophobia of the day; our weaknesses cost us a thousand times more regret and shame than our faults."

"How youth makes its wishes hopes, and its hopes certainties!"

"Hope is the prophet of youth—young eyes will always look forwards."

"There is wisdom in even the exaggeration of grief—there is little cause to fear we should feel too much."

"Nothing circulates so rapidly as a secret."

"Illusions are the magic of real life, and the forfeit of future pain is paid for present pleasure."

"We are reproached with forgetting others: we forget ourselves a thousand times more. We remember what we hear, see, and read, often accurately: not so with what we felt—that is faint and uncertain in its record. Memory is the least egotistical of all our faculties."

"The imaginative gods of the Grecians are dethroned—the warlike deities of the Scandinavians feared no longer; but we have set up a new set of idols in their place, and we call them Appearances."

"What a pity that one forgets one's childish thoughts; their originality would produce such an effect, properly managed! It is curious to observe, that by far the most useful part of our knowledge is acquired unconsciously. We remember learning to read and write; but we do not remember how we learned to talk, to distinguish colours, &c. The first thought that a child wilfully conceals is an epoch—one of life's most important—and yet who can recall it?"

"Knowledge, when only the possession of a few, has almost always been turned to iniquitous purposes."

"Surprises are like misfortunes or herrings—they rarely come single."

"Habits are the petrifications of the feelings."

"Imagination is to love what gas is to the balloon—that which raises it from earth."

"Love is followed by disappointment, admiration by mortification, and obligation by ingratitude."

"Inclination never wants an excuse—and, if one won't do, there are a dozen others soon found."

"Like the cards which form a child's plaything palace, our pleasures are nicely balanced one upon the other."

"The pleasure of change is opposed by that of habit; and if we love best that to which we are accustomed, we like best that which is new."

"Small evils make the worst part of great ones: it is so much easier to endure misfortune than to bear an inconvenience."

"The difference between good and bad intentions is this:—that good intentions are so very satisfactory in themselves, that it really seems a work of supererogation to carry them into execution; whereas evil ones have a restlessness that can only be satisfied by action—and, to the shame of fate be it said, very many facilities always offer for their being effected."

"The bitterest cup has its one drop of honey."

"Jealousy ought to be tragic, to save it from being ridiculous."

"We appreciate no pleasures unless we are occasionally debarred from them. Restraint is the golden rule of enjoyment."

"Experience teaches, it is true; but she never teaches in time. Each event brings its lesson, and the lesson is remembered; but the same event never occurs again."

"A patriot might take his best lesson of disinterestedness from feminine affection."

"Advice generally does require some very powerful argument to be taken."

"How much is there in one minute, when we reflect that that one minute extends over the world!"

We might continue examples like these to the last column of our journal, and still be far in debt to the beautiful thoughts and brilliant ideas which enrich and brighten every page. We have been utterly unable to exhibit the happy drawings of character, which are at once so uncommon and so true, that if we miss the individual, we in a moment catch the class: and, indeed, we must confess our incompetency to render justice to a work, which we do not hesitate to pronounce the most striking production of the novelist since *Waverley* promised the actual world a rare succession of enjoyment in the world of fiction.

The Political Life of the Right Honourable George Canning, from his Acceptance of the Seals of the Foreign Department, in September 1822, to the Period of his Death, in August 1827. Second Edition. 3 vols. 8vo. London, 1831. Longman and Co.

BROUGHT before us thus early in a second edition, as was to be anticipated from its rare value as a political and historical record, we return with a melancholy satisfaction to Mr. Stapleton's life of Mr. Canning. It possesses, indeed, many of the highest claims to public attention. It is written by one perfectly competent to the task he has undertaken, both by talents and circumstances: the private secretary of such a minister, so open and candid, must have had access to the most important information. This is evident throughout Mr. Stapleton's work. It draws a just picture of an individual of whom we also knew much, and can therefore truly vouch for the accuracy of the biographer, and we recognise in the portrait the accomplished statesman, the enlightened patriot, the sensitive, chivalrous, and noble-minded man. Canning, accused by his enemies of diplomatic intrigue, was of all human beings the most remote from the selfishness and treachery of party calculation; he was ingenuous to a fault; and the only can upon his confidingness of disposition, was derived from that acuteness of sense which he inherited from nature, improved (shall we call it?) by an acquaintance with office and office persons. He could not but be aware of its tricks and falsehood by which every minister is surrounded; but, clear-sighted as he was, even the perception of this was insufficient to convert his generous spirit into what might be deemed necessary duplicity; on the contrary, his resentment burst forth upon occasions when he detected deceit; but he was as unguarded as he was illustrious in genius, and pure in purpose. Some might think this a grievous fault; but we hope the day will come when the English government, by whomsoever administered, shall adopt the maxim of George Canning, and believe that entertaining, only, views for the peculiar benefit of England, are essential to the general interests of the world, (seeking no advantages, but from a high station promoting the universal weal), the weapons of utter truth and sincerity are worth tenfold all the arts and wiles of the most dexterous cunning.

These volumes, as we intimated in our notice of the first edition, demonstrate the great

tical system of Mr. Canning—a system, as we have stated, wrought with a manly straightforwardness which admitted of no mistake,—to balance the conflicting opinions into which European society had become divided. His sagacity soon saw that it was no longer a difference between sovereigns or countries, to be arranged by a treaty, or *pacified* by a war; but that two gigantic principles were at issue, and that the lover of Britain had to steer the vessel's course between the equal dangers of the stormy ocean and the lee-shore—between overwhelming democracy on the one hand, and oppressive despotism on the other. He knew that names were nothing; and he cared alike for liberalism and holy alliance, for the improving voice of mobs, and the tender mercies of tyrants. And in consulting the welfare of his native land, he resolutely determined that its immense weight in the scale of nations should never be thrown into either extreme—he felt our power, and that Britain could hold and trim the balance. He is dead.

It may be a strength or weakness of character, and probably it is wrong to depart from the common rules of criticism to identify an anonymous writer with his subject, but we cannot help it where the name of Canning occurs; yet we confess to an organisation which attaches us so strongly to individuals, that we never think of party or partisanship. Having conceived and justified our attachment by observation, imagination perhaps following in a slight degree, we delight in dwelling upon the attributes which have fixed our affection. The devotedness may be more or less powerful and rivetted, as the object may deserve, in pursuing the grand problem of life's trials; but we will once more take an opportunity of bearing our testimony to the memory of George Canning—a testimony unclouded by obligation—and give it, humble as it is, in aid of Mr. Stapleton's admirable exposition, to the exact truth of every syllable of which, especially in the new part to which we shall now allude, we can bear witness.

The additions thus made are singularly interesting. The English language has no such account of the formation of a ministry; and the faded details of similar negotiations sink into insignificance when contrasted with these striking particulars of an event so recent, so illustrative of the subject generally, so home to living characters of the foremost rank and influence. From Canning's untimely grave, lessons of high political wisdom may be learnt. We regret that our limits enable us only to repeat a small portion of them.

"On the 5th of January the Duke of York expired after a long and painful illness. His royal highness was the political enemy of Mr. Canning; and not long before his dissolution he had made an urgent representation to the king, 'strenuously advising his majesty to place the government of the country in a state of uniformity—and that that uniformity should be one of a decided opposition to the Catholic claims.' His majesty was, however, too well convinced of the value of Mr. Canning's services to be willing to dispense with them, as he must have done, had he followed the advice of his brother; and the step which his royal highness had taken was communicated to Mr. Canning. The health of his royal highness was, at the time of this communication, supposed to be rapidly improving; but Mr. Canning determined to wait for the more advanced recovery of the commander-in-chief, before he adopted any decisive measures, with respect to this active demonstration of

hostility against a confidential servant of the crown on the part of an individual holding so high an official post in the king's service. Instead, however, of recovering, his royal highness shortly after began rapidly to grow worse. While in this state the royal patient was exhorted to leave behind him some testamentary exposition of his opinions on the Catholic question; he, however, steadfastly refused to do so, saying, that had he lived he would have fought the question to the uttermost, but that he did not think it fair to embarrass those from whom he was about to be separated. Such noble and considerate conduct served not a little to increase Mr. Canning's 'self-congratulation that he had not allowed himself to be hurried into a controversial discussion, which must in its effects have disquieted the last weeks of his royal highness's life, and the closing intercourse between his royal highness and the king. I would not,' said Mr. Canning, 'for the world, have had to lay such a consequence to my own charge, however unintentionally produced, or under whatever provocation.' Mr. Canning attended the funeral of the Duke of York, at which mournful ceremony he caught a cold, which ended in an illness that gave a shock to his constitution, from which it never entirely recovered."

After Lord Liverpool was struck by disease from the roll of active and intelligent men, every eye was turned to Canning as his successor; and Mr. Stapleton's history of the transactions which ensued is, as we have said, of unequalled interest. We select some passages, but hardly hope to be able to connect them. We must trust to the memory of our readers,—it is only four years ago.

"A similar success to that which attended Mr. Canning's exertions on the corn bill unfortunately did not attend them on the Catholic question. Previously to the debate no expedient had been left untried, as well by some influential Protestant members of the government, as by some of its Protestant supporters, to procure a decision unfavourable to the measure."

The Master of the Rolls (Sir John Copley's) speech is thus mentioned.

"The groundwork of the learned gentleman's speech was unfortunately founded on a letter, addressed by Dr. Phillpotts to Mr. Canning, which the reverend controversialist had published in the form of a pamphlet. This individual had previously failed in drawing Mr. Canning into a private polemical correspondence on the subject of the Athanasian Creed; he was not more successful with his published letter, which savoured little of Christian charity, for Mr. Canning never took the trouble to notice it; but when used by the master of the rolls, it gave to his speech a character of personal hostility to Mr. Canning, which, there is every reason to believe, was very far from the intention of the speaker. It was late in the debate when Mr. Canning rose, much exhausted, and far from well. He applied himself more particularly to answer the arguments of the master of the rolls, in the course of doing which, he made some sarcastic observations. The unfairness of the learned gentleman's arguments he considered to consist in introducing into a discussion on the general principle, the question of securities, which was one of detail, and only a collateral branch of the subject; and in doing so, as if the supporters of general concession had given up the whole project of securities, when in point of fact the business of the night did not include that part of the subject. The effect of this

debate was to produce a coolness between Mr. Canning and the master of the rolls,—a circumstance which was viewed with no small degree of pleasure by the several enemies of each of them. The language of the master of the rolls was, however, unequivocally, that in the speech that he had made he had no manner of intention of acting with hostility towards Mr. Canning; and the feelings which he avowed were rather those of a friend who was hurt, than of an individual who had any thing to resent."

When Mr. Canning came to form the ministry, he offered the seals to Sir John Copley, who accepted them, and the correspondence is characteristic of both.

"Shortly after the debate they had met in the House of Commons, and shaken hands; so that when the time arrived for proposing to the master of the rolls to succeed Lord Eldon, Mr. Canning had no hesitation in writing to request the favour of seeing him, or in concluding his letter by saying, 'Believe me, my dear sir (*Phillpotts non obstante*), very sincerely yours.' To this letter the master of the rolls replied that he would come; and followed Mr. Canning's example of putting the pith in his conclusion, which was, 'Believe me now, as always (minus 24 hours), yours very sincerely.'"

Upon the larger question we copy the following:

"The postponement of these arrangements, which had been dictated as well by feelings of delicacy towards Lord Liverpool as by considerations of public advantage, was not unaccompanied by its counterbalancing inconveniences. The critical situation of the government kept men's minds in that state of excitement, that they could not rest without either talking or doing something, whether it were for good or for evil: and since the policy of the principal personages in the drama was to be quiet, individuals who held a secondary station in political importance, began to think that it was at least incumbent upon them not to remain inactive. The consequence was, that those who, if it had pleased God to have terminated, at the same moment, Lord Liverpool's mortal as well as political career, would have been content, had the immediate filling up of his vacancy been thus necessitated, to have seen that vacancy supplied by Mr. Canning, had time to consult together, and, by exciting each other's imaginations to be deluded into a belief, that though for the four preceding years Mr. Canning's had been the labouring oar in the government, yet because he was the avowed supporter of liberal principles, and because he was an advocate for Catholic emancipation, he was on these accounts unfit to hold the first place in the councils of his sovereign. Had this opinion produced on its professors no other effect than a determination not to support a government of which Mr. Canning was the head, it would be impossible to find in their conduct any just grounds of censure. But they did not confine themselves to such moderate and constitutional measures; for certainly one noble duke (and reports at that time stated that there were two) asked for an audience of the king, at which he attempted to dictate to his sovereign, in the exercise of his undoubted prerogative (that of choosing the individual in whom he would repose his chief confidence), by threatening his majesty with the withdrawal of his own support, and the support of some other noble personages who thought with him, in the event of his majesty thinking it right to place Mr.

Canning at the head of his government. The way in which his majesty received this intimation may be judged from the result. But this was not the only inconvenience which resulted from the then existing interregnum; for certainly the 'talk which part of the connexions of those who belonged to a government to which as yet Mr. Canning belonged, thought themselves at liberty to hold respecting him,' was of a most indecorous character. It was on the 27th of March that Mr. Canning went to the Royal Lodge; and on the following day the king held a long conversation with him on the then state of the government. In that conversation, when Mr. Canning was called upon for his advice, aware of the king's individual opinions on the Catholic question, he counselled his majesty to frame his government conformably to those opinions. But the king, although expressing his sense of 'the impossibility of parting' with Mr. Canning, nevertheless proposed to place at the head of the administration a peer holding Lord Liverpool's opinions on that question: whereupon Mr. Canning, upon being commanded to speak without reserve, humbly submitted to his majesty, that if those whose sentiments were favourable to the Catholics were to be excluded solely on account of those sentiments, as much as the Catholics, from the highest elevations in the state, and from the greatest objects of ambition, he could 'not consent to be the individual in whose person such a principle should be established.' He therefore felt himself bound honestly to state to his majesty, 'in plain terms,' that 'the substantive power of first minister he must have, and, what was more, must be known to have,' or he must beg leave to be allowed to retire from a situation which he could 'no longer fill either with satisfaction to himself, or with benefit to the king's service.*' The determination expressed by Mr. Canning in this conference speaks for itself, and requires little comment. He knew that he had been the main stay of the government during the four years that he had been a member of it; that as leader of the House of Commons, he held in the ministry the second station; and that, whenever a vacancy in the first should occur, he could not without degradation have consented to have his own just claims set aside in favour of another, unless there were better reasons for proscribing him than his being favourable to the Catholic cause; and he well knew that a public man, once degraded, could never again serve his king or his country with advantage to them, or with honour to himself. His resolution therefore was early taken, unhesitatingly announced, and steadfastly maintained. It should, however, be borne in mind what that resolution was. It was not that he would resign unless he were *first lord of the treasury*, but that he would resign unless he held, and was known to hold, the post of *first minister*; a post which it was at first supposed by the king might be held by any one of his confidential servants, and formerly had been held by Lord Chatham, with the office of privy seal. While these things were passing on the subject of the government, the House of Commons had begun to manifest symptoms of impatience at the

continuance of the government in an unsettled state."

"Meanwhile, although between the 31st of March and the 6th of April, Mr. Canning had no communication whatsoever with his majesty on the subject of the arrangements, yet he had frequent conferences with the Duke of Wellington and Mr. Peel. Mr. Peel's conduct in all of these interviews was in every respect honourable and consistent; he had made up his mind to resign, if an individual favourable to the Catholics should be placed at the head of the government; and as soon as he found that Mr. Canning would not yield this point, he made known what were his intentions. His professions, too, 'of respect and regard' for Mr. Canning were unbounded; so much so that Mr. Canning expressed himself as feeling 'it quite impossible to do sufficient justice to his frankness and straightforwardness, and to feelings for which he owed he had not before given Mr. Peel credit, but which,' he said, 'he hoped he knew how to value and return.' With the conduct of the Duke of Wellington Mr. Canning at one time thought he had reason to be dissatisfied, and certainly a good deal of misapprehension existed between them. Mr. Canning had heard that his grace did not disapprove, even if he did not sanction, the conduct of the Duke of Newcastle; and since the language of some of the immediate adherents of the Duke of Wellington was certainly any thing but friendly to Mr. Canning, it was not unnatural to suppose that their sentiments were, in some degree at least, in unison with those of their chief. Mr. Canning's feelings, therefore, towards the duke, about this period, were not of the most cordial nature; but, on the 2d of April, a common friend called on Mr. Canning; and, with the view to promote a better understanding, proposed that his grace should have an interview with Mr. Canning on the following day. The duke accordingly came to the Foreign Office on the 3d of April, and a conversation of two hours took place between them. At this conference on the part of Mr. Canning 'the fullest details were given of what passed at his audience with his majesty at Windsor.' On the part of the duke, explanations were offered, which induced Mr. Canning to say 'that every thing that had been in doubt had been cleared up satisfactorily; and that they 'parted' as a mutual friend would have wished,—'all being left well.'"

"Mr. Canning likewise again saw the Duke of Wellington for a few minutes. The effect of these two conferences was, that the belief which Mr. Canning had once entertained that the Duke of Wellington never thought 'of himself, for the post of prime minister was entirely changed, and that' Mr. Canning's 'belief then was, that the duke, and perhaps Mr. Peel too, hoped that the explanation between Mr. Canning and the duke would have ended in' Mr. Canning's expressing a wish that the duke 'should take the government.' The desire to be first minister, which Mr. Canning thought that the duke entertained, his grace subsequently disclaimed in the strongest and most unequivocal terms, asserting that he not only did not wish to occupy that post, but had an absolute repugnance to holding it,—a repugnance, however, which, about sixteen months after, he succeeded in conquering. On the night of the 5th the king came to town, and Mr. Canning had an interview with his majesty on the 6th. On the 9th, by the king's command, Mr. Canning saw Mr. Peel, who came for the purpose of stating to Mr. Can-

ning the name of an 'individual whose appointment, as premier, Mr. Peel conceived likely to solve all difficulties.' That individual was the Duke of Wellington; but Mr. Canning was of opinion that the appointment of his grace would not afford any such solution. This last attempt at excluding Mr. Canning from the premiership on account of his Catholic sentiments, while he remained in the government, having failed, the king determined to protract no longer the anxious state of suspense in which the country had been kept, and accordingly sent for Mr. Canning on the 10th of April, and issued to him his royal commands to prepare, 'with as little delay as possible, a plan for the reconstruction of the administration.'"

We need not go over the almost simultaneous resignations of half the cabinet.

"That they were the result of combination on the part of these noble personages cannot be supposed, after their denial that they were so; but, the fact of five having been sent within eighteen hours, and four out of the five, within three, certainly made them assume the appearance of an attempt at intimidation. If, indeed, this had been the object, nothing could have been less calculated to answer the purpose. They who could have conceived such a project must have formed a very erroneous impression of those with whom they had to deal. The effects which it appears they produced in his majesty's mind were displeasure with those who thus acted, and the confirmation of his resolution to support the minister of his choice. Nor had Mr. Canning a heart to quail before difficulties: neither of them were appalled at these unexpected obstacles. His majesty forthwith confirmed Mr. Canning's appointment by giving him his hand to kiss."

The debates and explanations which followed must be fresh in the remembrance of every one; and we shall only farther advert to two hitherto unpublished letters between the Duke of Wellington and Mr. Canning. We wish we could find room for all, but they are too long; and we must take a short extract. Mr. C. writes:

"There is but one other part of your grace's speech which appears to call for any observations from me. Your grace emphatically says, that *your* being at the head of the government was 'wholly out of the question.' I learned this opinion of your grace with sincere pleasure. The union of the whole power in the state, civil and military, in the same hands, (for your grace, as prime minister, could never have effectually divested yourself of your influence over the army,) would certainly, in my opinion, have constituted a station too great for *any subject*, however eminent, or however meritorious, and one incompatible with the practice of a free constitution. Nothing would have induced me to serve under such a form of government, and I am rejoiced to find that your grace's opinion was always against such an arrangement. But I confess I am surprised that, such being your grace's fixed opinion, it should nevertheless have been proposed to me, as it was more than once, and up to the 2nd of April inclusive, to concur in placing your grace at the head of the government. There is in this apparent contradiction a mystery which I cannot explain. In rejecting, however, as I did, that proposition, I do assure your grace, I was not actuated by any feeling unfriendly or disrespectful to your grace: nor am I conscious of any such feeling now. I take nothing personally amiss in your grace's speech. I retain a recollection, corresponding with your own, of the intercourse which has for some years sub-

* "This brief statement of what passed in this conference between the king and Mr. Canning is founded on a paper which the latter left behind him, recording the whole of the conversation. It was dictated by Mr. Canning immediately after his return from the Royal Lodge, and, of course, it would not be justifiable to quote it, except in elucidation of that which Mr. Canning had recorded his intention of publishing, viz. the correspondence with the Duke of Wellington, in which reference is made to this conversation."

sisted between us on political affairs; and there is not in the nation, or in the army itself, an individual who regrets more deeply than I do, that your grace should have thought it necessary to withdraw from the command of the army at the same time that you resigned your seat in the cabinet."

To this his grace replies :

"I considered your letters to me, and most particularly the one of the 11th of April, in which, be it observed, you state, that you had previously submitted it to his majesty, to have placed me in such a relation towards his majesty, and towards yourself, as his first minister, as to render it impossible for me to continue my office of commander-in-chief. I could not be otherwise than in constant confidential relations with his majesty on the one hand, and with yourself on the other, as you will find by and by, when you shall come to conduct the duties of the office of first lord of the treasury; and it was impossible for me to look for that personal good will and confidence in such communications, which are absolutely necessary, and which I trust I deserve, after I had received from you a letter, in which I thought you had made use of a tone of rebuke not provoked by anything contained in my letter to you, and for which the sanction of his majesty was, as I think, very unnecessarily obtained. I know what I owe to his majesty, but I should be unworthy of his favour and kindness, and quite useless to him hereafter, if I had continued to endeavour to serve him in the post of commander-in-chief of his army, after I had received that letter. I am not in the habit of deciding upon such matters hastily or in anger; and the proof of this is, that I never had a quarrel with any man in my life."

Mr. Stapleton's remarks must conclude our review.

"Upon a full and impartial examination of the whole of the documents relating to this discussion, together with the commentary that the subsequent acts of the Duke of Wellington's government has afforded to them, it cannot but be matter of surprise as well as of regret, that the Duke of Wellington should have taken the important decision to relinquish his public duty on such apparently erroneous and trivial causes of personal offence. For when it is considered that within two years of this period, the Duke of Wellington himself, as head of the government, persuaded the king to grant unequalled concession to the demands of the Catholics, it is difficult to attribute his grace's secession from the government in 1827 to the influence of the only other motive assigned for it—viz. deference to his majesty's opinions on the Catholic question, and the impossibility of giving fair support and confidence to a government at the head of which was an individual favourable to the Catholics, from the conviction, that the necessary result of the preponderating influence of a government so constituted, would inevitably bring the country into a state of peril. To this answer Mr. Canning made no reply: he feared that had he done so, the correspondence might have 'degenerated into controversy,' and that any rejoinder from him might have placed the chance of a return to a mutual good understanding at a greater distance than ever, and thereby have continued to 'deprive the country of his grace's military services.'"

With these very imperfect quotations, we dismiss this new edition of the political life of Mr. Canning, to the increased attention which awaits it. Even amid the ferment of these evil times, it must command the best considera-

tion of the country. The dearest advantages are to be derived from the calm and judicious view of those points of external and internal policy which it offers to us, while it embalms the memory of a minister whose loss is now felt more deeply than ever.

Cameron: a Novel. 3 vols. 12mo. London, 1832. Bull.

THERE is both cleverness and capability in this work—many characters most happily sketched, and several scenes both of interest and amusement. The faults seem to us the usual ones of a young writer—too many persons introduced on the scene; materials inartificially managed—i. e. not sufficiently connected; and a story too wire-drawn. *Cameron*, however, opens with much spirit; and Lord Marsden—poor, proud, and prejudiced—is a good specimen of the author's skill in portrait-painting.

"Equally exempt from the interruptions of friends and the encroachments of neighbourhood, Lord Marsden, ensconced within a fortress of prejudices, lived among his own domestic circle unimproving and unimproved, disliking the world, which he was too proud to court, and too poor to interest—more vain of the past than ambitious for the future, and solacing himself, in lieu of living society, by a continual reference to that which was extinct—cherishing a tenacious reverence for every thing said and done by his ancestors, and thinking that no conversation could afford such intellectual delight as that which he enjoyed when descanting upon the wisdom and power of those honoured relatives whose portraits were fading upon the wainscot, and whose remains crowded his family mausoleum—a building darkly conspicuous upon the only rising ground within view, and serving as a continual remembrancer, not of life's brief tenure, but that he represented eleven titled predecessors. . . .

"His private library communicated with the breakfast room; and no sooner was the first stroke of nine heard to reverberate upon the house clock than he let himself out from that learned retreat, where, to borrow the expression of a contemporary nobleman, 'he read all day, and no one was ever the wiser;' and it would have been but little gratifying to him could he have remarked with how much more of fear than pleasure his approach was met. Being, however, one of those persons always so self-engrossed as to have no leisure for mortifying discoveries, restraint passed current with him for deference, and awe for duty. His morning salutation never amounted to more than a low bow to his lady and sister, accompanied by a wave of the hand generally, signifying that his children were recognised, and that every one might be seated. Like many who have but little to shew for their time, he was a tenacious timeist; and wo to the defaulter who should happen not to be present at this ceremonious greeting. . . .

"Conversation at Lord Marsden's table generally took its tone from himself, if that might be called conversation where one leading person, and that person a tiresome egotist, contrived to engross it exclusively. Fancying himself an antiquary, when he was merely a genealogist, his knowledge of genealogy originating in pride, rendered it the most disagreeable acquirement he could have cultivated. Pride of ancestry was his ruling passion; and although perhaps it is a passion less tolerated in society than many of a more vicious tendency, it was nevertheless one which was not, in his case, without some advantages, for it

was to this passion that he owed his voluntary seclusion from a world in which length of pedigree, without the concomitants of talent, accomplishments, or wealth, meets but with little of that consideration which the pride of ancestral dignity is so much disposed to exact."

There are two Scotch families well and naturally depicted; the one a scene of miserable contention and indolent irregularity—the other of order and domestic comfort. There is a power of drawing from real life which promises well for our author's future efforts; and we notice it with pleasure, while we recommend the present work to the regard of novel-readers.

Tour of a German Prince, &c. 2 vols. Wilson.

[Fourth notice: Conclusion.]

A FOURTH continuation upon two not very large volumes shews how much this various publication has offered to us for such selection as we supposed would be acceptable to our readers. But as all things must have an end, so must Prince Puckler Muskau. We shall therefore, having contributed to make him popular in these dull days, wind him up, in, we trust, an agreeable manner; though one of our public duties, before we close, is to designate some of the defects which detract from his amusing qualities. Like all real or pseudo romanticists, *alias* enthusiasts, the prince is liable to misconception and prone to exaggeration. For the latter (without quoting, for, in fact, the work is full of it) we will only refer to the bull story, pp. 6, 7, Vol. II.; but to justify our charge of incorrectness, we will cite one example, from which a pretty accurate idea of the prince's incorrectness as to realities may be formed.

"I found (says he) all the towers in Canterbury (1) decorated with flags in celebration of New-year's day. I commemorated it in the proudest and most beautiful of all English cathedrals. This romantic edifice, begun by the Saxons, continued by the Normans, and recently restored with great judgment, forms three distinct and yet connected churches; with many irregular chapels and staircases, black and white marble floors, and a forest of pillars in harmonious confusion (2). The yellow tone of the sandstone is very advantageous, especially in the Norman part of the church, where it is happily relieved by the black marble columns (3). Here lies the brazen effigy of the Black Prince, on a sarcophagus of stone. Over him hang his half-mottled gloves, and the sword (4) and shield he wore at Poitiers. A number of other monuments adorn the church: among them, those of Henry the Fourth and Thomas à Becket (5), who was killed in one of the adjoining chapels. A great part of the old painted window is preserved, and is unrivalled in the splendour of its colours. Some parts of it are only patterns and arabesques, like transparent carpets of velvet: others appear like jewellery formed of every variety of precious stones. But few contain historical subjects. What gives this magnificent cathedral a great pre-eminence over every other in England is, that there is no screen (6) in the middle to cut and obstruct the view, and you see the whole extent of the aisle—from four to five hundred paces long—at one glance."

Now, in this single page there are six misrepresentations (Prince Puckler Muskau would be a horrible member of the Antiquaries!). 1. Only one of the towers bears a flag. 2. The pillars are placed in perfectly regular order. 3. There are no black marble columns in the building. 4. The sword of the Black Prince was removed many years ago. 5. The tomb of Becket was destroyed by the Puritans (we believe in Cromwell's time): not a vestige of it remains. And, 6. There are two screens, one separating the nave and choir, the other the choir and Trinity chapel.

We have been right, therefore, we hope, in illustrating our German author's work rather from his views of our manners and peculiarities than from his statistics or statements where any thing like exactitude was essential. But, indeed, such of our readers as have met the prince in his English visit will readily perceive that we must, in honour to our judgment, and

without much reference to his book, have chosen this course, if we meant to have our critical acumen unquestioned and uncondemned. The prince's mode of thinking and acting threw a sort of cloud over his latter residence here; or, we might rather say, rendered his position in fashionable society a problem. A misunderstanding at the Traveller's Club, and the interference of the Prussian minister, made some stir at the time: if it shewed nothing else, it shewed the curious and laudable anxiety of a government touching the conduct of its subjects in other countries; and, perhaps, it was the most desirable of consummations that the prince should bid adieu to London, and hasten to join the fair dame to whom these letters are addressed.

[As a note we may mention having frequently met the author in general society—a fine-looking fellow, and known to be a man of large estates in Silesia. He married a daughter of Baron Hardenberg, whom, we believe, he has rejoined since this correspondence to her was written, in German, than which no more beautiful specimen of composition exists in the modern literature of the country.]

Having in this parenthesis delivered ourselves of personalities, which seemed to be required in order to form a just opinion of this publication, we shall now conclude with a few farther extracts; and we set out with, to us, a new piece of necromantic natural history.

"After my guests had exhausted their store of anecdotes, which were not precisely of a kind to entertain you with, they resorted to all sorts of practical jokes and 'tours de force.' One of these was quite new to me. It is an experiment which anybody may try, and it struck me as curious enough. The wildest and fiercest gamecock may be rendered motionless, and compelled to lie in deathlike stillness as long as you please, by simply laying him on a table, with his beak close to a white line drawn across it. Nothing is necessary but first to draw this line with chalk, then to take the cock in your hands and lay him on the table with his beak turned towards it. You press him down, and there he will lie as if bound by some spell; his beak stretched out, and his eyes immovably fixed on the white line, till you take him away. The experiment must be tried by candle-light."

At page 84 we are informed that the lord lieutenant of Ireland possesses the power of creating *baronets*; a mistake which a stranger could only fall into by night. A little farther on we are amused with anecdotes of Lady Clarke and her daughters; some of which, p. 112, as well as the strange news communicated in a letter to a lady about emptying the cess-pools at Paris, p. 296, had better have been omitted. They smack of foreign manners, and rather shock our barbarian delicacies. Mrs. Austen, said to be the translator of the book, should have used her discretion upon them.—But to characteristics! The prince has a droll way of inducing himself to behave properly.

"The truth is," (as he says), "there are few men who are not sometimes capricious, and yet oftener vacillating. Finding that I am not better than others in this respect, I invented a remedy of my own, a sort of *artificial resolution* respecting things which are difficult of performance,—a means of securing that firmness in myself which I might otherwise want, and which man is generally obliged to sustain by some external prop. My device then is this: I give my word of honour most solemnly to myself to do, or to leave undone, this or that. I am of course extremely cautious and discreet in the use of this expedient, and exer-

cise great deliberation before I resolve upon it; but when once it is done, even if I afterwards think I have been precipitate or mistaken, I hold it to be perfectly irrevocable, whatever inconveniences I foresee likely to result. And I feel great satisfaction and tranquillity in being subject to such an immutable law. If I were capable of breaking it after such mature consideration, I should lose all respect for myself;—and what man of sense would not prefer death to such an alternative? for death is only a necessity of nature, and consequently not an evil;—it appears to us so only in connexion with our present existence; that is to say, the instinct of self-preservation recoils from death; but reason, which is eternal, sees it in its true form, as a mere transition from one state to another. But a conviction of one's own unconquerable weakness is a feeling which must embitter the whole of life. It is therefore better, if it comes to the struggle, to give up existence for the present with a feeling of inward triumph, than to crawl on with a chronic disease of the soul. I am not made dependent by my promise; on the contrary, it is just that which maintains my independence. So long as my persuasion is not firm and complete, the mysterious formula is not pronounced; but when once that has taken place, no alteration in my own views—nothing short of physical impossibility—must, for the welfare of my soul, alter my will. But whilst I thus form to myself a firm support in the most extreme cases, do you not see that I also possess a formidable weapon of attack, if I were compelled to use it, however small and inconsiderable the means may appear to many? I, on the contrary, find something very satisfactory in the thought, that man has the power of framing such props and such weapons out of the most trivial materials, indeed out of nothing, merely by the force of his will, which hereby truly deserves the name of omnipotent. I cannot answer for it that this reasoning will not appear to you, dear Julia, distorted and blameworthy: indeed it is not made for a woman; while, on the other hand, a completely powerful mind would perhaps as little stand in need of it. Every man must, however, manage himself according to his own nature; and as no one has yet found the art of making a reed grow like an oak, or a cabbage like a pine-apple, so must men, as the common but wise proverb has it, cut their coat according to their cloth. Happy is he who does not trust himself beyond his strength! But without being so tragical about the matter, this *grand expedient* is of admirable use in trifles. For example, to fulfil tedious, irksome duties of society with the resignation of a calm victim,—to conquer indolence, so as to get vigorously through some long-deferred work,—to impose upon one's self some wholesome restraint, and thus heighten one's enjoyment afterwards,—and many, many more such cases, which this occasionally sublime, but generally childish, life presents."

We do not much relish this strained philosophy; but we will quote a striking sentence, in which, after describing a young man of large fortune starting to enjoy life, the author finely remarks: "While talking with him, I thought, reflecting upon the difference between us, '*Voilà le commencement et la fin!*' One whom the world sends forth, and says, 'Partake of me;' and the other whom she calls home, and says, 'Digest me.'"

Of Miss O'Neil from Lady Morgan: "Lady M—— afterwards related to me many interesting circumstances respecting the celebrated Miss O'Neil, whom, as you know, I regard as the

greatest dramatic artist it has ever fallen to my lot to admire. She said that this extraordinary young woman, who from the very commencement of her career had given evidence of the highest genius, remained utterly neglected at the theatre in Dublin, where she performed for some years. She was at that time so poor, that when she returned home at night after the greatest exertions, she found no other refreshment than a plate of potatoes and a miserable bed which she shared with three sisters. Lady M—— once visited her, and found the poor girl mending her two pair of old stockings, which she was obliged to wash daily for her appearance on the stage. Lady M—— now procured for her various articles of dress, and took upon herself in some degree the care of her toilet, which had been extremely neglected. She obtained more applause after this, though still but little. At this time one of the managers of the London theatres accidentally came to Dublin, saw her, and had the good taste and judgment immediately to engage her for the metropolis. Here she at once produced the most extraordinary sensation; and from a poor unknown young actress, rose in one moment to be the first star of the theatrical firmament of England."

Returning to England, the prince wanders to and fro; and as his course is erratic, so shall our few remaining extracts be miscellaneous.

Of Mr. Beckford.—"I must send you another anecdote or two of this extraordinary man. When he was living at Fonthill, a neighbouring lord was tormented by such an intense curiosity to see the place, that he caused a high ladder to be set against the wall, and climbed over by night. He was soon discovered, and taken before Mr. Beckford; who, on hearing his name, contrary to his expectations, received him very courteously, conducted him all over his house and grounds in the morning, and entertained him in a princely manner: after which he retired, taking the most polite leave of his lordship. The latter, delighted at the successful issue of his enterprise, was hastening home, but found all the gates locked, and no one there to open them. He returned to the house to beg assistance; but was told that Mr. Beckford desired that he would return as he had come,—that he would find the ladder standing where he had left it. His lordship replied with great asperity, but it was of no use; he must e'en return to the place of his clandestine entrance, and climb the ladder. Cured for ever of his curiosity, and venting curses on the spiteful misanthrope, he quitted the forbidden paradise. After Fonthill was sold; Mr. Beckford lived for a while in great seclusion in one of the suburbs of London. In the immediate neighbourhood was a nursery garden, extremely celebrated for the beauty and rarity of its flowers. He walked in it daily, and paid fifty guineas a-week to the owner of it for permission to gather whatever flowers he liked."

Of Buonaparte, &c.—"Napoleon was brought up a bigot; and although too acute to remain so, or indeed, perhaps, ever to have been so sincerely, habit—which exercises so strong an influence over us all—rendered it impossible for him ever to divest himself entirely of first impressions. When any thing suddenly struck him, he sometimes involuntarily made the sign of the cross,—a gesture which appeared most extraordinary to the sceptical children of the revolution."

"When Lucien went to Spain as ambassador from the republic, the general, my informant, accompanied him as secretary of legation. La-

ciën's predecessor had 'affiché' all the coarseness of republican manners, to the infinite scandal of the most formal and stately court in the world; and the Spaniards dreaded still greater rudeness and arrogance from the brother of the first consul. Lucien, however, had the good taste to take the completely opposite course; appeared at court in shoes and bagwig, and fulfilled all the duties of ceremony and etiquette with such punctuality that the whole court was in a perfect ecstasy of delight and gratitude. Lucien was not only extremely popular, but the perfect idol of the whole royal family. He returned their friendship, the general affirmed, sincerely, and often earnestly warned the king against the Prince of the Peace, as well as against the insatiable ambition of his own brother, of whom he spoke on every occasion without the slightest reserve. The confidence, however, of the old king in his 'grand ami,' as he called Napoleon, remained unshaken to the last. Before his departure, Lucien crowned his popularity by a magnificent fête, the like of which had never been seen in Spain, and which cost nearly four hundred thousand francs. The highest persons about the court, a number of grantees, and the whole royal family, honoured it with their presence; and the latter seemed not to know how sufficiently to express their attachment to the ambassador. A few days afterwards, all the members of the legation received splendid presents: the ambassador alone was omitted; and republican familiarity permitted many jokes upon him in the palace of the embassy. Meanwhile the audience of leave was over, Lucien's departure fixed for the following day, and all hopes of the expected present at an end, when an officer of the Walloon guard came with an escort to the hotel, bringing a large picture in a packing-case, as a present from the king to Napoleon. When Lucien was informed of this, he said, it was doubtless Titian's Venus, which he had often admired in the king's presence, and which was certainly a very valuable picture, but that the carriage of it was inconvenient to him, and he must confess, he had rather the king had not sent it. However, the officer was most politely thanked, and dismissed; and Lucien, taking out a valuable shirt-pin from his breast, begged him to accept it. The ambassador now ordered the case to be unpacked, the picture taken out of its frame, which could be left behind, and rolled so that it could be carried on the imperial of a carriage. The secretary did as he desired:—scarcely was the wrapping-cloth raised, when, instead of the admired Venus, a face any thing but beautiful—that of the king himself—smiled upon him. He was just flying off in mischievous delight to inform the ambassador of the comical mistake, when on entirely removing the cloth, a yet greater surprise detained him;—the whole picture was set round like a miniature with large diamonds, which Lucien afterwards sold in Paris for four millions of francs. This was truly a royal surprise, and the ambassador speedily recalled his order for leaving the frame."

We now take our leave of a very ultra, very extravagant, and very amusing work.

The Usurer's Daughter. 3 vols. Simpkin and Marshall.

THERE are many very unreasonable things; and among them is, sending three volumes on Thursday, and expecting these said tomes to be read, reviewed, printed, and published, by magic we suppose, on Saturday morning. Now, our only spell is industry; and all that in-

dustry has enabled us to do is to have read the first volume, which strikes us as very clever, and more interesting than the author of Atherton's works have usually been. The story is here carried on with great spirit, and the Usurer is a very original and forcibly drawn character. We purpose returning to these pages with much pleasure. We believe the name of the writer is Scarlett, and that he is also the author of Blue-Stocking Hall, Truckleborough Hall, Rank and Talent, Tales of a Briefless Barrister, Atherton, &c. We may, however, be wrong in this list, as we confess our only guide has been the internal evidence of a family resemblance. To this we must add, that Mr. Scarlett's improvement has been very great since his first production.

The Dream of Eugene Aram, the Murderer.

By Thomas Hood, Esq. With Designs by W. Harvey. Engraved on wood by Branstons and Wright. Pp. 31. London, C. Tilt.

WHEN this powerful and pathetic poem first appeared, as portion of an Annual, we took occasion to point out the great talent it displayed, and to notice how poorly they appreciated the genius of its writer, who, because he presided over the sphere of literary fun, pun, and humour, fancied that he was a mere punster and humorist. Here, and in many of his other productions, we have ample proofs of his ability in the higher range of the affections and passions; and much as we admire him in his own peculiar vein, we are always equally happy to meet him in these his more tender and touching moods. We have only farther to say, that the designs which embellish this publication are worthy of the poem.

Cavendish; or, the Patrician at Sea. 3 vols. London, 1832. Colburn and Bentley.

SAVE and except that literature is now a species of epidemic, to which all more or less fall victims, we can find no sufficient cause for the author of these volumes writing. His narrative is uninteresting, his characters unintelligible, and his various scenes deficient in that dramatic power which alone can give the reality of life to the work of fiction. He falls, too, into the common error of supposing that the absurd must be ludicrous: it is oftener dull. We also protest against dragging real personages upon the stage, with an eye to nothing but the advertisements, which will hereafter announce that the Duke of W. or of N., and lords this, that, and the other, figure in the pages. For example, what shadow of resemblance is there in the sketch meant for the Duke of Newcastle, dragged in quite *à propos des lottes*? The vituperations of the Duke of Wellington and the apostrophes to Napoleon may go together. There is little or no story, and we could very well have dispensed with the history of the hero's disgusting intrigues. But from all this censure we carefully except the admirable notes in the third volume; we cannot direct public attention too strongly towards them. We only add, that we infinitely prefer our author's truth to his fiction.

An Introduction to the Atomic Theory; comprising a Sketch of the Opinions entertained by the most distinguished ancient and modern Philosophers with respect to the Constitution of Matter. By Charles Daubeny, M.D. &c. London, 1831. J. Murray.

A POPULAR and historical view of a high branch of philosophy—one which tends more than any other to cement the moral with the

physical sciences, and point out the striking relations of the atomic theory with the constitution of matter, both as regards its finite divisibility and the definite proportions in which it enters into the constitution of various bodies in the organic and inorganic world, and in the application of which these laws are susceptible. The reader will be particularly struck with the essays on the definite proportions observed in the floral organs of plants, and in the orbits described by the planets. The whole subject has been treated in a manner suitable to the high character which Professor Daubeny enjoys among men of science.

Ancient History; exhibiting a Summary View of the Rise, Progress, Revolutions, Decline and Fall of the States and Nations of Antiquity. By G. Robinson, D.D. New edit. 8vo. pp. 600. London, 1831. Souter.

THIS work appears to be a very improved edition of a former school-book by the same author. The five maps, exhibiting the territories of the Greek and Roman empires, more particularly that of Albion, under the Roman dominion, cannot fail to prove acceptable to juvenile historians. The chief novelty of the volume, however, consists of a series of questions, at the end of each chapter, connected with the leading events previously recorded. This plan is, as we have always held, admirable for school tuition, as it teaches the pupil to reflect upon, as well as to read, the transactions of former ages, in order to furnish his mind with the answers required. We may, therefore, safely recommend this work as one of the most useful of its class.

Maugham's London Manual of Medical Chemistry, &c. &c. London, 1831. Whittaker and Co.

A THICK pocket volume, in which the Pharmacopœia is interlined with a literal translation; and an immense quantity of pharmaceutical, chemical, therapeutical, and botanical information is condensed, and made intelligible to students who may not have enjoyed the advantages of a thorough classical or medical education. A work of this kind cannot fail to be extensively useful.

A Dictionary of Quotations from various Authors in Ancient and Modern Languages, with English Translations, and illustrated by Remarks and Explanations. By Hugh Moore, Esq. pp. 507. London, 1831. Whittaker and Co.

A VERY ample and well-constructed dictionary, by the aid of which any man may appear to be a learned clerk and deep scholar with wonderfully small trouble. The author has availed himself so largely of the preceding labours of Macdonell, that we should not be surprised if he heard of it legally: his own additions are, however, numerous; and an index is a manifest improvement.

The Algerines; or, the Twins of Naples. By William Child Green, author of "Alibeg the Tempter," and "the Abbot of Montserrat." 3 vols. London, 1832.

THERE is a considerable degree of invention in these volumes. An eastern and supernatural story is founded on a very original idea, and the consequences of its narration are amusing; while there are banditti, lovers, and moonlight, for juvenile readers.

ENORMOUS HAIL-STONES.

As promised in our last, the following are engravings of the general size and shape of hail-stones that fell at Buyukderé, at 7 o'clock in the morning of the 5th Oct. 1831. One was weighed, and found to be 110 drachms, nearly 1lb, and 14 inches in circumference. That resembling the layers of an onion is very remarkable.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

THE subjects which have already been forwarded to this Society are certainly more numerous than has been usual at the commencement of a session; at the same time, it must be confessed, that they have not promised to be so useful as others which have preceded.

On Wednesday evening, negative reports were received on abating nuisances in public streets; on church bells; on a saw-mill; on curing smoky chimneys; and on a method of rendering the names of streets more visible.

Mr. Ryder's apparatus to measure the draft of carriages was recommitted, several members conceiving that the experiments which had been made had not been on a sufficiently enlarged plan, nor were they quite satisfactory.

A joint committee of Agriculture and Mechanics proceeded, on Tuesday afternoon, to the Apothecaries' Garden at Chelsea, to view an apparatus constructed by Mr. Anderson (a botanist well known in that quarter), for warming greenhouses, &c. by hot water. The application of that element, when heated, it is well known, is not new for the purpose of warming greenhouses and other buildings: still, the committee considered the plan so cheap and effectual, that they recommended, in their report, that the thanks of the Society should be transmitted to Mr. A. for his communication; and that it should be referred to the committee of Correspondence and Papers to select such parts of it for publication as appeared original.

A report, on a machine for dressing warps, which had been negatived last session, but which had been since recommitted, was read to the Society, bearing the former decision, which was confirmed.

The Society have done well in the purchase of Barry's Etchings, accompanied by letter-press descriptive of those beautiful and highly finished paintings which ornament the walls of their great room. The collection, some years since, was published at six guineas; the Society are now enabled to dispose of them at just half that price, and they are in an excellent state of

preservation. In addition to the series of paintings, the book contains impressions from strips of copper (as that ingenious and extraordinary artist described them), representing sketches intended to have been painted as two grand centres over the chimneys in the great room; one, representing the king (George III.) in 1761, recommending to both houses of parliament a bill for the independence of the judges; and the other, the queen (Charlotte), at Windsor, superintending a scene of domestic education: also, a testimony of veneration for the integrity and transcendent abilities of the late Charles James Fox; Barry's *Lear*, which, for boldness of design and mastery of execution, perhaps, was never surpassed in that branch of the art; and his Pandora, etched by the late Lewis Schiavonetti, from a drawing in possession of Mr. Solly.

ZOOLOGICAL SOCIETY.

At a meeting of the committee of science, Tuesday, Nov. 1. — W. Yarrell, Esq. in the chair, — a variety of specimens of fish, many of them unknown to science, which were collected by Captain Belcher, R.N., were on the table; and the attention of the members was directed to them by Mr. Bennett. Mr. Ogilby made some observations on several skins lately received, particularly one of a variety of kangaroo, which appeared to be new. Also one of a new variety of ornithorhynchus, remarkable from the bill being broad and short as compared with the varieties already known, and which he proposed to call the ornithorhynchus brevirostris. Letters were read by the secretary from Drummond Hay, Esq. H. M. consul at Tangier; Sir Robert Ker Porter, dated Caracass; and Captain Farrar, dated Portpatrick. Captain Farrar referred to some peculiarities in the emigration of birds between Portpatrick and the opposite coast of England. Sir R. K. Porter stated the continuance of his labours in obtaining specimens for the Society. Drummond Hay, Esq., who has always been a most persevering friend to it, announced the transmission of a pair of ichneumons (very fine specimens); also a pair of striped Barbary mice;

all of which have arrived safe, and are deposited in the menagerie. He mentioned also the shipment of four young ostriches; a present from the Sultan of Morocco to his Majesty, and which are safely arrived in the gardens of the Society. He further stated that, in conjunction with — Wiltshire, Esq. H. M. consul at Mogadore, he hoped to become possessed of an animal found in the desert, of the name of *moahr*, probably a new species of antelope, and which will be a valuable accession to our natural history.

GEOLOGICAL SOCIETY.

WEDNESDAY, Nov. 16th. — R. I. Murchison, Esq., president, in the chair. — Fellows were elected. A paper by Mr. Dunn was first read on a gigantic species of *plesiosaurus* found in the lias shale of Whitby, and now in the Scarborough museum. A letter was then read from Count Montlosier, addressed to the president and fellows, on the modern and ancient states of Mount Vesuvius, and on the origin of the crater-lakes of the Eifel and of Auvergne.

Among the presents laid upon the table was a donation from Miss Gurney, of North Rye Cottage, to the president, and from him to the Society, of various bones of the fossil elephants found on the coast of Norfolk between Cromer and Happisburgh, some of which were of gigantic size. Among the additions to the library were three productions from the pen of E. Necker (de Saussure), who was present, — Baron Humboldt's new work, *Fragmens de Géologie et Climatologie Asiatique*.

PHRENOLOGICAL SOCIETY.

On Monday, Dr. Elliotson, the president, in the chair, a paper was read by him of the objections urged by Mr. Godwin, in his late work, entitled, *Thoughts on Man*; in which it was contended that these "Thoughts" were, what the author acknowledged them to be, "loose and undigested." The first Nos. of Dr. Vimont's stupendous work on Comparative Anatomy, were on the table; which when completed, will contain the result of the examination of 2,600 heads of animals.

which the habits of 1,500 have been under his personal observation. Dr. Elliottson announced the formation of a Phrenological Society in Paris, many of whose members are well known to the scientific world, such as Broussais, Cloquet, Royer, David the sculptor, Rostan, Fovelle, &c. besides many deputies.

LITERARY AND LEARNED. ROYAL SOCIETY.

Nov. 17th.—J. W. Lubbock, Esq. in the chair. Two papers were read, the first on the theory of the moon, by Mr. Lubbock; and the second, illustrated by beautiful drawings by Perry, on the placenta, by Dr. R. Lee. A list of valuable donations to the Society, from the King of Holland, Prof. Muncke of Heidelberg, and others, was read, and a copy of the forthcoming part of the Society's Philosophical Transactions was submitted to the inspection of the fellows. Mr. G. Davies and Mr. Wilkins were admitted into the Society; and notice was given from the chair that, by the new statutes of the Society, the ballots for election would take place only on the first meeting of every second month of the session. Professor Farmer, of Harvard University, in America, and other distinguished visitors, were allowed to be present at the meeting.

Nov. 24th. The introductory portion of a valuable paper, by Mr. Faraday, on the connexion of electricity and magnetism, was read. It treated chiefly on Becquerel's theory of magnetism. When the reading of the paper shall have been concluded, it may be noticed more at length. There were also read, an elaborate paper, by Professor Airy, on an inequality of long period in the motions of the Earth and Venus; and a brief communication, by Sir Everard Home, on mammalia. M. Bozé, of Montpellier, presented a copy of his prize essay on the Creation, written as a competitor for the Bridgewater Legacy.

ROYAL SOCIETY OF LITERATURE.

[We have much pleasure in fulfilling the expectation expressed in our former report of the proceedings of the Society, by inserting a portion of the *Odyssey* which Mr. Sotheby, at the request of the Council, read to the meeting.]

The Conclusion of the *Necyomanteia*. *Odyssey, Book XI.*

JUDGE of the dead, stern Minos, first appear'd,
Who, mid them throned, a golden sceptre rear'd:
Somesat, somestood, and, pleading each his cause,
Heard in vast Hades' dome th' eternal laws.

Then huge Orion in full course I traced,
Who the wild beasts along the meadow chased,
Those whom his mace had on the mountains
quell'd,

And still his shade that mace all brazen held.

I Tityus saw, the son of earth, who spread
His length, nine acres, o'er his shadowy bed:
A vulture on each side his liver tore,
His entrails pierced, and bathed his neck in
gore.

Vain his tired arms were stretched to force
Th' insatiate beak that gorged the living prey.
Mad wretch! who fain, in Panopea's grove,
Had forced Latona, the beloved of Jove.

There Tantalus I saw, who lonely stood
Where to his chin uprose the tempting food:
But when, inflamed with thirst, he bow'd to
alake

His parch'd lip quivering o'er the treacherous
to oft the water sank, and dark the sod
beneath his foot drain'd by th' avenging god.
Frees of luxuriant growth bow'd o'er his head,
Their fruits, the apple, pear, pomegranate
spread,

Figs, and vivacious olives; but in vain
He darted forth his hand the fruit to gain:
Swift from his grasp, by whirlwinds darkly
driven,

They cross'd in fitful gusts the clouds of heaven.
Mid bitterest toils on Sisyphus I gazed,
Who with both arms a stone's vast weight up-
rais'd;

Then, prone on hands and feet, sore straining
Up a hill's height the obdurate mass to move;
But when just reached its summit, back again
Suddenly bounding downward to the plain,
Rapidly revolvant, rush'd the rock amain.
Again he straining strove, while seen to flow
Hot sweat-drops bathed his limbs, and reek'd
around his brow.

Then the vast strength Herculean I survey'd,
Yet but a semblance, an unreal shade,
The while he revelled banqueting above
With Hebe sprung from Juno and from Jove.
Round him the clamour of the dead was heard,
As clangs in swarms the migratory bird.
He, dark as night, strain'd on his bow the string,
And fitting for its flight the arrowy wing,
Keen gazed in alacrity to loose it: round his breast
Rung a dread baldrick with gold forms imprest,
Huge bears, fierce lions, and the mountain boar,
Wars, battles, slaughters, murders grimed with
gore.

He who had there work'd out his wondrous
Had ne'er before or since such marvels wrought.
On me the hero fix'd his searching view,
And thus address'd me as my form he knew:
"Ulysses, thou, thy destined toils undone,
Endur'st what I endured beneath the sun.
I, to the yoke of an inferior chain'd,
I, born of Jove, his slavish tasks sustain'd.
He sent me here to seize hell's guardian hound,
The direst toil that all my labours crown'd.
I dragged him forth from Hades' howling shade,
By Hermes and Minerva's heavenly aid."

He spake, then sank in Hades' gloom his way,
The while I linger'd, and there fix'd my stay,
The spirits of the heroes to behold,
Shades of the mighty men who died of old:
And I had seen, and there had proudly trod
Pirithous, Theseus, each a son of god,
But swarms of spirits rush'd shrill-shrieking
round,

And fear o'erpower'd me at th' unearthly sound,
Lest the horrid fiend's Gorgonian head
Should tower above the shadows of the dead,
Sent by dire Proserpine. I swift withdrew,
And reach'd my ship, and urged on board my
crew.

They swift obey'd, and loosed the ship from
And bending o'er their seats, with sweep of oar
Froth'd the blue ocean, or with spread of sail
Flew with unlabour'd speed before the gale.

FINE ARTS.

NEW PUBLICATIONS.

An *English Girl*. Painted by G. S. Newton,
A.R.A.; engraved by G. T. Doo. Moon,
Boys, and Graves.

FROM the unaffected beauty of the subject, we conjecture that the above must be the title of the charming plate, of which a proof lies before us, without the letters;—a deficiency that is not otherwise supplied. But, whatever may be its name, it does the highest credit both to the painter and to the engraver. The character is deliciously simple, feminine, and chaste: and the arrangement of the figure and drapery is replete with Mr. Newton's peculiar and piquant taste; while in force, variety, and, above all, in breadth, it at least rivals any of Mr. Doo's former masterly works.

A *Concise Summary of a Series of Notes and Observations, practical and theoretical, on the Art of Landscape Painting in Water-colours, adapted to the Practice of young Amateurs*. Houghton and Co.

WE have read this little treatise with great pleasure. It contains much information that will be very valuable to the student in the particular branch of the fine arts to which it relates; and there is no passage in the whole work of which we more cordially approve than the warning against "the delusion of hoping to succeed by means of those too common devices of idleness, ignorance, or caprice, which constitute the imaginary *short roads* to knowledge and skill; traced out with mechanical exactitude, and paved with nostrums and recipes."

Composition. Painted by the late Sir G. Beaumont. Drawn on stone by H. W. Burgess. Dickinson.

THIS is admirable as a Composition, and as a specimen of lithography hardly to be surpassed for its bold, free, and masterly execution.

A *New Drawing Annual: the National Drawing Book*. By G. W. Davis. London, Carvalho.

SETTING out on the true principle of tuition in the arts, by the simple lines, we find this a very well-conceived and well-designed drawing-book. In the landscape department it is particularly praiseworthy; but, indeed, the whole is good; and a better production of the kind need not be put into the hands of the youthful student.

Talleyrand.—A very striking, though whimsical caricature, likeness of this distinguished politician has just appeared at Mrs. Humphrey's window in St. James's Street, as "a diplomatist after his 51st protocol." It is long since we have seen so laughable a whole-length, or so humorous a portrait.

ORIGINAL POETRY.

BROKEN VOWS.

"Do not vow; our love is as frail as our life, and full as little in our power; and are you sure you shall outlive this day?"—*Sir G. Etherege's Man of Mode*, Act II. Scene 1.

COME, wreath me a mighty bowl to-night,
And twine it round with fading flowers,
And leaves that droop beneath the blight
That sometimes weeps Love's sunniest bowers;
And you who long have ceased to smile,
Bring tears to grace our sad uprouse,
And let them flow the freer, while
I brim the bowl to broken vows.

I drink not to the laughing eyes
That seem in floods of joy to move,—
I fill the bowl to fruitless sighs,
To broken hearts and hopeless love:
Not to the rich and careless curls
That, waving, play on youthful brows;—
I drink to tears that rival pearls,
I brim the bowl to broken vows.

I drink not to the minstrel's song—
The whispered tale—the heart's own laugh;
But deep I pledge the wretch who long
Has learned from sorrow's cup to quaff.
I drain no bowls to revelry,
To midnight feast or mad carouse;
But deep I drink to misery,—
I brim the bowl to broken vows.

Let happiness toast joy alone,
And courage too pledge high the brave,
We drink to hearts that, like our own,
Are one and all a living grave.

Of perjured vows, and broken plight;—

But, tush!—the pledge that grief allows,

We'll drink at least once more to night—

Come, brim the bowl to broken vows.

Goldbro' Hall.

ZARAPH.

CHOLERA MORBUS.

[We subjoin a letter, which will, we think, be read with great and general interest, giving an account of this appalling disease from actual observation. It is written by a most intelligent young medical friend of ours; whose zeal in his profession has induced him to visit Sunderland, for the sake of studying the disorder there.—*Ed. L. G.*]

Sunderland, Nov. 23, 1831.

MY DEAR SIR,—I hasten to allay the anxiety which, in common with others, you feel on the progress of the "Cholera" in this town, and to convey to you what information I have been enabled to obtain since the short period of my arrival. There is not, I can assure you, that dread of the disease in Sunderland and its neighbourhood, which is to be found in the metropolis and many parts of the country. I slept, the night previous to my arrival, at a gentleman's house a short distance from Sunderland, where one of the family, who is a medical man, returns in the evening after visiting cholera patients, and there is not the least distrust of his bringing infection. In the town itself, except from the occasional grouping of medical men, nothing would indicate the existence of a malignant malady; artists pursue their daily avocations, each moves unconcernedly in his own direction, and the shops are crowded with the usual number of customers. But if we leave the principal street, and penetrate the long alleys or by-streets, which resemble the "cloes" of Edinburgh in their narrowness and filth (exceeding them perhaps in the latter), and containing houses which are thickly peopled—the scene changes, and the arrival of two or three medical men is like that of an equipage in some remote village, which every one turns out to see. This morning, in company with two medical gentlemen of the town, I visited one of these narrow streets, the receptacles of filth, poverty, and a wretched population; and I can say, without exaggeration, that we were, in our course, called into every fourth house; we went up one side of the street, and came down the other: out of these there were not more than three or four cases of malignant cholera, and two of these alone will probably be fatal: they are aged persons; and the symptoms of the blue or Asiatic cholera are extremely well marked. The first case which I saw on Tuesday the 22d, the evening of my arrival, was one well adapted to impress a person, newly acquainted with the disease, with an idea of its formidable and painful characters. A few boys and other persons had collected at the door of a respectable haberdasher, in the principal street of the town. I was proceeding to see cases in the eastern part of the parish of Sunderland, and finding, on inquiry, that the master of the shop (Mr. Bulman) had been taken ill, I entered the house. The patient was a strong, muscular man, fifty-four years of age, and, I believe, addicted to spirituous liquors. He had complained in the evening of pain in the bowels, and of an uneasy feeling. He had left his shop to join some friends at a public house, where he took a glass of brandy and water, and a considerable quantity of laudanum. He had been soon after seized with vomiting and purging, and the landlord had brought him home in this condition. It was now eight o'clock (Tuesday, Nov. 22d). He was undressing to go to bed, his sickness and purging

had left him, and he attempted to bear up against an inward anxiety, that was already well expressed in his countenance. Dr. Ogden, who was with me at the time, bled him in the arm, upon his being put to bed, and obtained about eight ounces of blood. Mr. Torbock, who came in shortly afterwards, opened another vein, and obtained a nearly similar quantity. The blood had no buffy coat, the serum scarcely separated, and its hue was unnaturally dark. Owing to the restlessness of the patient, the wounds continued open to the last; and Mr. Torbock informs me he bled when no pulse was perceptible. The spasms came on very violently, and he threw himself so often from side to side, that it was almost impossible to keep the bags of hot sand to his feet. Mr. T. exhibited oxygen gas, and the effect was for the time decidedly beneficial; his countenance, already becoming blue, vivified, and the circulation was temporarily restored. During the night the gas was twice exhibited again, but the relief appears only to have been temporary. He constantly expressed himself desirous of going to stool, but always uselessly; the vomiting and purging had entirely left him. Sedatives being hardly indicated in this case, six drams of spirits of turpentine were given, and doses of rhubarb and brandy; also an enema of turpentine and starch. Subsequently, a bolus was exhibited of calomel and rhubarb with oil of cassia. At half-past ten o'clock he was seen by Drs. Daun, Gibson, and Barry. Dr. Barry ordered turpentine to be given, in doses of two drams, as long as the pulse continued to sink; and Dr. Gibson ordered a dram of nitric acid in a pound of water for drink. The symptoms, however, continued the same, only that the cramp had disappeared after the exhibition of the first remedies, and at six o'clock the patient sunk under the malady. This is a case in the middle classes of life, where there was every convenience and comfort immediately afforded, and yet where the symptoms and progress of the disorder were of the most malignant kind. I will not trouble you with a detail of further cases. I am busily collecting them without any prejudices to bias my researches, with a view to ascertain the contagious or non-contagious nature of this disease in our country, and, if possible, of the causes which may really prove predisposing. For the present I abstain from mentioning names; but I have met with the kindest treatment from the medical men of Sunderland, and all that I have become acquainted with have done every thing in their power to furnish me with immediate information on the occurrence of new cases. The universal fear of the effects upon the commerce of the town, which would be produced by a knowledge of the spreading and increase of the disease, not only paralyses the labours of the medical commission sent here by government, but are productive of the very worst consequences to the afflicted. It is impossible, in the multiplicity of cases which occur, and with the poverty of the patients to combat against, that they can obtain the care and attention which alone might render recovery possible. There are only two cases at the lazaretto (a clean, admirably ventilated house, newly whitewashed, and fitted up with every comfort for cholera patients)—for no one will go there—they term it the "blood house." This morning a chair was sent for an old man (who, long ere you receive this, will be no more), and he refused; though, when I saw him, he was lying on the floor, with a mattress and a single blanket. The two cases in the lazaretto, the girls Nicolson, are the last of a

family of five. It is not certain if the child of one of these did not catch the disorder from its mother's breast. There is to be a meeting of medical men to-night, which I shall attend. You will see that Dr. Daun has omitted the list of diarrhoea cases. The town is now divided into districts, and each is superintended by a medical man, who is to give in a report on the number of cases which occur in his charge of common and malignant cholera, with other details. This is a most admirable arrangement; and if medical men will, as in honour bound to do, send in exact reports, the tabular views of the progress and distribution of the disease, which will be thus presented, will be of material assistance in the adoption of any decisive opinions on the characters of the pestilence. It would hardly be believed, that it was reported throughout the town this morning that Mr. Bulman died of apoplexy! The insertion of deaths under the head of common cholera is, even according to the medical men here, an absurdity, for it does not occur with such violence (if at all) at this period of the year. The whole amount of deaths is said not to exceed sixty; and it is to be hoped, by the history of the duration of the malady in different places on the continent, that it has reached its acme, and that it will now diminish in intensity.—I remain, &c.

W. AINSWORTH.

DRAMA.

AT Drury Lane, *Masaniello* has been produced with a strong cast: at Covent Garden, *Power* is getting quite at home in the *Ambassador*, and is lauded accordingly.

THE ADELPHI.

A PIECE called the *Wept of the Wish-ton-wish* was produced at this theatre on Monday, for the purpose of introducing Mdlle. Celeste to an Adelphi audience. Bayne, Downe, Henning, Reeve, Miss Daly, &c. &c. have trivial parts. The interest of the piece turns entirely on the love of the "White Skin," *Hope Gough*. Celeste, for the Indian chief, O. Smith, who has carried her off ten years before from the Wish-ton-wish. Celeste is a fine-looking creature, with magnificent eyes and teeth. Her acting was very effective throughout, but especially in the parts with O. Smith, and in an Indian dance. She seems wonderfully strong for so slight a figure. We do not remember to have seen a finer piece of acting (in dumb show) than the deaths of the Chief and Hope in the last scene. The author, Mr. Barnard, complains that his drama has suffered much in effect and intelligibility by being cut down from a full piece to an interlude.

OLYMPIC.

ON Monday an entertaining *bagatelle*, the *Widow*, was played at this theatre. *Vestra*, as the *Widow*, is as blooming and gay as ever, and with her snatches of ballads, quite enchanting. Listen, as *Augustus Gallopade*, was in famous spirits, and danced about like a satyr; whilst Vining was as like a rhapsodising poet as could be wished.

SINCE our last, we had the pleasure to hear a private rehearsal of Miss Shireff, and, unwilling to risk so promising a *débutante* by exciting too high expectations, we may express the delight we received from her exertions, and the high hopes we entertain of her success. Her voice is splendid and flexible; she is a charming and unaffected creature; and seems to us to need nothing but encouragement to render her

one of the sweetest as well as most brilliant ornaments of our native school.

VARIETIES.

Phrenology.—We observe, by a copy of the last Phrenological Journal from Edinburgh, that the editor has published his complaints against the *Times* newspaper and *Literary Gazette*, for their reprobation of the inhuman cruelty displayed in experiments on animals. The editor farther affords proof of his possessing the organs of forgetfulness and omission—for he has not said a word of the explanation of the *Literary Gazette*, which so entirely justified its remarks.

The Green Park.—A great improvement is about to be made in the Hyde Park Corner entrance to the Green Park, under the direction of Mr. Decimus Burton. That gentleman (whose talent is so conspicuous in many of our public places) has, we are informed, received his majesty's commands to turn the line of Constitution Hill road (no politics!), so as to run through the noble arch he has erected there, which will thus be converted into a public entrance of the Green Park for carriages having the *entrée* and equestrians. Pedestrians will have the option of passing it on the east side. The king thus liberally gives to the public a portion of the north-west corner of Buckingham Palace gardens, for the purpose of affording an easy and handsome sweep for the road.

The Garrick Club.—We had intended to notice the progress made towards the opening of this club with *éclat*, at the beginning of the year; and also to insert some correspondence on the sin of punning, with miserable examples of the sinners: but our space has been claimed by other matters, and we must throw ourselves on the danger of delay.

London Bridge.—We have to wait a week in order to lay before our readers some essential details respecting new London bridge, and the probable effect of the removal of the old one. In the mean time we have to state, that the rumours respecting the insecurity of the former are gross exaggerations: the latter is now being rapidly removed.

Fall in the Thermometer.—The French papers mention an extraordinary fall observed in the thermometer at Marseilles on the 3d and 4th instant; viz. from 19° to 4° Reaumur, or from 74° to 41° of Fahrenheit.

Burking Extraordinary!—What will the Lords do? An awful discovery has been made. It seems that two noted men, calling themselves Henry Colburn and Richard Bentley, have been taken up through making strenuous exertions this season to Burke the whole of the peerage. They have got their arms down, and shortly will begin pressing them; but not before a great impression has been made will they be bound over to a peer at the next session. They are well-known resurrectionists, and have lately carried on their trade to a frightful extent, by raising the whole of the extinct Peerage, which a witness is prepared to prove on oath, for he saw them all lying about wrapped up in sheets. [As this seems to be an ingenious puff, we reward it by insertion.—Ed. L. G.]

French Ingenuity.—Our neighbours of Paris have more whim than we have, especially in the way of novel nomenclature. Some one has lately started a superior sort of cabriolet, and, by way of marking its distinction over the cabri-au-lait already on the pavé, he has called it the cabri-au-crème.

Growing Potatoes in a Collar.—A German paper has published the following account, com-

municated by the person who made the experiment:—"I covered a corner of my cellar with a bed an inch thick, of two-thirds of river sand and one-third of common mould. In the month of April I put into it thirty-two yellow potatoes, the peel of which was very thin, and placed them on the surface, without covering them either with mould or sand. They produced an abundant crop; for at the end of the ensuing November I gathered above one-fourth of a bushel of the best potatoes, the tenth part of which were as big as an apple, and the rest as a walnut or a large cherry. The peel was very thin, the pulp white and mealy, and the taste exceedingly pleasant to the palate. During the six months these potatoes lay under ground, I used no culture whatever, and yet they grew without the influence of the sun or the heat of the day. This essay might be put into practice with advantage in fortresses, in houses of correction, and indeed in every dry cellar of large cities, where it is of great importance to have a wholesome and abundant food for a large population."

A man who had not money enough, and a man who had too much, laid a singular wager the other day at Paris. The poorer one bet the richer that he would sit upon the parapet of the *pont aux choux* from seven in the morning until five in the evening, for one month, and that he would make all kinds of grimaces the whole of the time. He has already been at his post a fortnight; but he is obliged to have a friend by his side to inform those that pass by, that he is not making faces at them, but that he is doing it for a wager. Hour after hour this friend is occupied in giving the public this piece of information; and people as they pass say to one another, "Never mind that fellow; he is not making faces at us." By this wager the *grimaceur* will realise twenty francs a day.

A bridegroom in Pomerania, sitting at table with his bride, on seeing her eating with delight the toast which was under some woodcocks, exclaimed, "How I should like to be a woodcock, and then render you so happy!" This is a German feeling.

On a placard affixed near the menagerie of the king's garden at Paris, are these words. "For the preservation of the animals, people are forbidden to give them any thing to eat."—*Paris in London.*

LITERARY NOVELTIES.

[Literary Goods Weekly Advertisement, No. XLVII. Nov. 26.]

Mr. T. Hood, we perceive, on the back of his Eugene Aram announces a companion to his Epping Hunt, in a piece on "Epsom Races," with which he intends to make a great stand, and give several plates for all ages. Though people must, therefore, ask for Hood's Epsom, we are inclined to think it will rather be a pill to purge melancholy, than physic for the public.

The Testimony of History to the Doctrine of the Holy Trinity, by the Rev. George Stanley Faber, B.D. Travels in the North of Europe in 1830, 31, by Mr. Elliott, with detailed descriptions of the wild and picturesque scenery, and personal adventures in spots far removed from civilised society, is, we hear, almost ready.

A small volume on the Phenomena of Dreams, and other Transient Illusions, by W. C. Dendy. The interesting Journal of the brothers Lander will, we learn, appear very early in the new year.

The Hive, a Collection of the best Modern Poems, chiefly by Living Authors, for the use of Young Persons. Also, a work for Children, entitled Stories from Natural History.

The Modern Sabbath Examined. Sermons preached before the University of Oxford, by the Rev. Dr. Burton, Regius Professor of Divinity. The First Volume of the Imperial Magazine, Second Series, embellished with Plates and numerous Woodcuts.

A Second Series of American Stories for Children, selected by Miss Mitford. Fisher's Drawing-Room Scrap-Book, containing highly finished Plates, after Drawings by Sir Thomas Lawrence, Prout, Stanfield, Copley Fielding, Cattermole, &c.; with Poetical Illustrations by L. E. L.

Sir Walter Scott's new work, Count Robert of Paris, and Castle Dangerous, is expected in the middle of next week.

Baines's History of Lancashire, in various sizes. Brockden Brown's story of Edgar Huntley, or the Sleep-Walker, and the conclusion of Schiller's Ghost-Seer, are announced as the next volume of the Standard Novels. The celebrated Canterbury Tales are to follow in an early volume.

A second edition of Europe in 1830-1, or the Romance of Present Times; a series of Tales, comprising the History of the late Revolutions, &c. The Perfumer's Oracle, or Art of preparing Perfumes and Cosmetics.

A new volume of Sermons, by the Rev. Dr. Arnold, of Rugby.

Mr. James, who has written so ably on Chivalry, is about to publish a new work, to be entitled Memoirs of Great Commanders.

Mr. Berry and Son announce a monthly work, under the title of a Genealogical Peerage of England, Scotland, and Ireland; illustrated with engravings of Arms, &c.

The Life of Wycliffe, by the Rev. C. W. Le Bas, M.A.; being the first No. of the Theological Library.

Mr. Elmes, the Architect, proposes to publish a General History and Survey of the Parish of St. Bride, Fleet Street; and of the Ancient Royal Palace and Hospital of Bridewell, in the City of London.

The Domestic Chemist; comprising Instructions for the Detection of Adulterations and Poisons: Vol. II. of the Polytechnic Library.

Anecdotes of William Hogarth, written by Himself; with Essays on his Life and Genius, and Criticisms on his Works, selected from Walpole, Gilpin, Lamb, and others.

LIST OF NEW BOOKS.

Lardner's Cyclopaedia, Vol. XXV. Military Commanders, by Gleig, fcp. 6s. bds.—Roby's Traditions of Lancashire, Second Series, 2 vols. 8vo. 2s. cloth; royal 8vo. India proofs, 3l. 3s.; India proofs and etchings, 4l. 4s. cloth.—Mental Recreation, or Select Maxims, fcp. 6s. 6d. bds.—Cameron, 3 vols. 8vo. 1l. 11s. 6d. bds.—Daubeny on the Atomic Theory, 8vo. 6s. bds.—Selections from Southey, 12mo. 5s. bds.—Bouchette's British Dominions in North America, 4to. 2 vols. 2l. 16s. bds.—Moral Tales, 18mo. 3s. hf.-bd.—Heeren's Historical Researches on the Ancient Nations of Africa, 2 vols. 8vo. 1l. 8s. cloth.—Councils at Home, 18mo. 3s. hf.-bd.—Grandamma's Rhymes for the Nursery, 18mo. 2s. hf.-bd.—Sermons, by the late Rev. Edward Payson, D.D. 8vo. 10s. 6d. bds.—Memoirs of the Duchess of Abrantes, 2 vols. 8vo. 1l. 8s. bds.—The Catechism of Health, by Dr. Granville, F.R.S. 18mo. 5s. bds.—Hartley's Researches in Greece, crown 8vo. 6s. cloth.—Rev. B. Scott's Sermons, 8vo. 12s. bds.—The Noregaya, a Musical Annual for 1831, 10s. 6d. bds.—The Young Reviewers, by Estlin for 1831, 18mo. 1s. 6d. hf.-bd.—The Amaranth, 24mo. 2s. 6d. bds.; 3s. 6d. silk.—Juvenile Cyclopaedia, Vol. IV. 18mo. 3s. 6d. cloth.—The Jew, 3 vols. 8vo. 1l. 11s. 6d. bds.—Isabella, 18mo. 2s. 6d. bds.—Gorton's Topographical Dictionary, Vol. II. 8vo. 1l. cloth lettered; coloured, 1l. 10s. cloth.—The Edinburgh Cabinet Library, Vol. V. Early English Navigators, 6s. bds.—Prayers for Private Worship, selected by the Rev. S. F. L. Blosse, 24mo. 3s. bds.

Longitude... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

We are so much in arrears with original poetry, that the lines of H. S. must waste their "sweetness" on the desert air.

Whenever we fall into an error, however unimportant, we are bound in candour to redress it. From the preface to the Bouquet, we were led to suppose that its share of originality referred to some portion of its literary contents; and to these, in our last week's notice, which has been arranged by the publishers, we alluded. The novelties ought to have been expressly mentioned, as it is impossible to know what has, or what has not, appeared in obscure or extinct magazines. Besides, the volume itself seemed so little worthy of attention, that we did not bestow upon it a very minute examination; and it is only the strict sense of justice, and love of perfect truth, which induces us to make even this slight allusion to it. Some of the engravings, it is stated, have not been published before: perhaps it may be so.

We have no fewer than four new Novels this week; and the interest we attach to one of them has caused us to defer several other Reviews, Continuations, Correspondence, &c.

In 18mo. 2d edition, enlarged, price 6s. boards.
SURE METHODS OF IMPROVING HEALTH AND PROLONGING LIFE, by regulating the Diet and Regimen. Embracing all the most approved principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the Cure of Obsolete Chronic Diseases, as Consumption, Rheumatism, &c. Long Life. To which are added, an Account of the Art and excellent Effects of Training for Health, Rules for reducing Corpulence, and Maxims for the Bilious and Nervous, &c. Illustrated by Cases.

By T. J. GRAHAM, M.D. &c.
 "We are disposed to think it the most useful and rational work of the kind we have met with. It contains many hints new to us, and is altogether an admirable code of health."—*Atlas*, Sept. 1827.

"The tendency of this volume to advance the important object which it proposes is unquestionable; and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1827.

"That men of all habits will derive information from it, calculated to increase their comfort and extend their days, is firmly our conviction."—*Edinburgh Observer*, Jan. 1828.
 To this edition is attached an Appendix, containing a full Account of the Cholera, with the best Remedies, as ascertained by Physicians of the greatest experience in that fatal Disease.
 London: Published by Simpkin and Marshall, Stationers' Court; or sold by all Booksellers.

Of whom may be had,
 Latest published, in 8vo. price 18s. boards, in 1 large vol. 8vo. price 18s. boards, with Engravings.

2. A Chemical Catechism, in which the Elements of Chemistry, with all the recent Discoveries, are very clearly and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufactures, and Medicine, described. Illustrated by Notes, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms.
 "We esteem and recommend it. Every subject of interest connected with this delightful science is treated of in the clearest manner."—*London Weekly Review*, 21st Feb. 1829.

"Every thing is here written up to the latest date, and the work cannot fail to be of great use to the student. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—*Monthly Magazine*, 1st March, 1829.

"The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements to the compound and illustrative branches of the study. It is very superior to Parkes's."—*Atlas*, 1st March, 1829.

New Work by the Author of "the Collegians"
THE INVASION.

By the Author of "the Collegians."
 Saunders and Otley, Public Library, Conduit Street.
 Of whom may be had, a new edition of
The Collegians, a Novel.

"This is the most powerfully written tale we have for some time met with."—*Literary Gazette*.
 "The stern imbecility of the heart-broken gentleman may be compared in effect and in touching beauty to that beautiful and impassioned scene in 'the Antiquary'—the fisherman's lamentation over his son. Can praise go higher?"—*Spectator*.
 "The author of this work combines more abilities with eloquence, more polish with picturesque more dramatic power, both of a tragic and comic kind, with pleasing descriptive talent, than either of the authors before us."—*Edinburgh Review*.

In a pocket size, price 2s. bound,
A COMPANION to the ALTAR, extracted from Hulse's Office of Devotion.
 Printed for C. J. G., and P. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall, London.

The most approved Medical Guide for Families.
 In 1 thick vol. 8vo. double columns, price 18s. cloth boards, 2d edition, enlarged, corrected, and improved, of
A DICTIONARY OF MEDICINE for POPULAR USE; containing an Account of Diseases and their Treatment, with Directions for administering Medicines, the Regulation of Diet and Regimen; and the Management of the Discharge of Urine.
 By ALEXANDER MACALVAY, Medical Doctor, Fellow of the Royal College of Surgeons of Edinburgh, and Physician-Accoucheur to the New Town Dispensary.

The arrangement of the present work being strictly alphabetical, affords the utmost facility of reference, an advantage not possessed by any work of a similar description. In its compilation the author has made it his constant endeavour to select such language as may be perfectly intelligible to the non-medical reader; and when a disease is signified by more than one popular name, a reference is made under each name to that part of the work in which the disease is treated.

Diet and Regimen have received that share of attention which their importance demands, and the circumstances requiring the use or rejection of any article of food have been carefully pointed out. The advantages and disadvantages of wine, spirits, tea, coffee, tobacco, and other articles of luxury, have also been fairly stated; and the pernicious nature of many of the most celebrated quack medicines is exhibited in an Appendix at the end of the work.

The following selection is made from the numerous testimonials in favour of the work:—

"Calculated to accomplish all that could be wished in a popular system of medicine."—*Edinburgh Medical and Surgical Journal*, No. 98.

"We have seen nothing of the kind better adapted for consultation."—*Literary Gazette*.

"We know not a safer manual of medicine in our language."—*Scots Times*.

"Decidedly the most useful book of the kind that has yet been offered to the public."—*Calcutta Mercury*.

"Dr. Macalvay's Dictionary may be safely recommended as a most useful, complete, and popular work, which may be safely and advantageously consulted in all cases where health is affected."—*Edinburgh Review*.

"The Medical Dictionary of Dr. Macalvay is undoubtedly the most rational book of the kind we have yet met with, and cannot fail to be eminently useful."—*Dumfries Courier*.

Interesting New Works.
 In 2 vols. 8vo. with Two Portraits, one of the Duke of Abrantes (Junot), and the other of Napoleon.
MEMOIRS of the DUCHESS of ABRANTES, MADAME JUNOT.

Written by HERSELF.
 Comprising her Recollections of the Life of General Junot, and of other celebrated Persons attached to the fortunes of Napoleon.
 "Also an elegant French edition of this work, in 2 vols. 8vo. with Two Portraits, new first edition, at nearly half the price of the Paris edition.
 "Few are so competent as myself to give a detailed account of Napoleon. My mother was present at his birth. She rocked him in his cradle, and was second mother to him when he quitted Brionne and came to Paris. My husband's connection with Bonaparte commenced with the siege of Toulon, and from that time they continued united until Junot's death."—*Introduction*.

II.
Voyage to the South Seas, in 1829 and 1830, comprising Scenes in Brazil, Fern, Manilla, the Cape of Good Hope, St. Helena, &c. By C. S. Stewart, A.M. Chaplain in the United States Navy. In 2 vols. post 8vo. with Three beautiful Plates.

In 2 vols. with numerous Plates, Plans, &c.
THE BRITISH DOMINIONS in NORTH AMERICA; including an Account of the Present State of Upper and Lower Canada, New Brunswick, Nova Scotia, the Islands of Newfoundland, Prince Edward, and Cape Breton.
 By Lieutenant Colonel BUCHANAN, Surveyor-General of Lower Canada.

The interest which the British North American Colonies, particularly the Canadas, have hitherto excited, must now be considerably enhanced in the mother country, as our possessions in that part of the world have become the theatre of extensive emigration from the United Kingdom. It is therefore eminently desirable that the most ample and authentic information should be obtained in respect to those provinces. The present work is the result of an actual survey.
 Henry Colburn and Richard Bentley, New Burlington Street.

Frankenstein, and the Ghost Seer.
 In small 8vo. neatly bound and beautifully embellished, price only 6s.

FISHER'S DRAWING-ROOM SCRAP-BOOK. With Poetical Illustrations.
 By L. E. L.
 Messrs. Fisher, Son, and Jackson, request attention to the following attractions in their Annual:—
 1st. The increased Number of Engravings.
 2dly. The Literary Illustrations.
 3dly. The Period of Publication.
 4thly. The Size—Quarto.
 The Drawing-Room Scrap-Book is intended to contain a full choice selection of the most admired engravings which have recently appeared in several expensive and popular publications, for the convenience of which the established reputation of Messrs. Thomas Lawrence, Messrs. Stanfield, Proust, Copley, Farington, Cattermole, Allom, and Pinner, as artists; and of Messrs. Flaxman, Goodall, Wallis, Brandard, Miller, Le Petit, &c. as engravers, will be a sufficient guarantee.
 Unlike the other Annuals, the Drawing-Room Scrap-Book will not anticipate its proper season; and on that ground alone is entitled to attention as a genuine and desirable novelty for a Christmas Present, or New Year's Gift.
 Published by Fisher, Son, and Co.; Simpkin and Marshall; and Tilt, London.

With Two Portraits—Sir F. Burdett and J. Haime, Esq. M.P. on the 1st of December will be published, price 1s. III. of

 J. Wilson, 5, Wellington Street, Strand; and sold by all Booksellers.

With a Portrait of P. Sandby, Esq. R.A., from a Drawing by R. Coway, Esq. R.A., engraved by R. Dagley, on the 1st of December will be published, No. XI. of
THE LIBRARY OF THE FINE ARTS.
 Contents: I. A Visit to Moopla—II. Paul Sandby and his Times—III. Sketches by a Travelling Artist—IV. Plans to Amateurs on Landscape Painting—V. On Imitation—VI. Leaves from my Pocket-Book—VII. Stage Perspective: as exhibited versus Sandby—VIII. Ancient English Architecture—IX. National Gallery of Paintings—X. Memoirs of Sir J. H. Hobday—XI. Critical Notices—XII. Miscellaneous—XIII. Early Catalogues of the Royal Academy.

Second edition of Part II. is now ready.
 M. Arnold, Tavistock Street, Covent Garden; and sold by all Booksellers.

On Wednesday next
THE EDITOR OF THE TIMES NEWS-PAPER (Lord Brougham and Vaux) is the Person which will appear in the forthcoming Number of Fraser's Magazine. Among the contents are: The Cholera—National Unions—O'Connell and Irish Affairs—Letter to E. L. Baines—Stock Exchange—Poor Laws in Ireland—Progress of Polish History—a highly interesting Article by the Editor Shapard on the Soul—and a Few Words from Sir Morgan O'Donoghue on Past and Present Events.

The Publisher never had greater pleasure in announcing any Number of his Magazine. Continued success for two years has emboldened him to make greater exertions, and invest a larger capital, in rendering his Journal the most complete of the country publications of the kind. He has obtained the sanction of the first writers of the day in every department of literature, among whom are individuals high in political office, and competent to write, with the best possible information on the movements of parties, the external and domestic policy of the country, and the measures of the late and present administrations. The Publisher appeals with satisfaction and pride to the forthcoming Number for the truth of this assertion, and which will be more every way worthy of the perusal of every true lover of his country—of every man who feels interested for the preservation and welfare of the Church, the King, and the Constitution.

With regard to literary merit, the publisher trusts examination. Reviews of all new works have been undertaken in the most fearless spirit of independence. This characteristic of the Magazine has raised him many enemies among disaffected writers, and reviewers, and bookborders, but he makes an impure falsehood by dealing out trash and garbage to the public. (N. A. such, and in spite of their penny hostility, "Fraser's Magazine" always has been, and will always continue, the avowed and mortal enemy. The Journal is not connected with any party publishing house, and the public have therefore a guarantee that its opinions will neither be sold for lucre, nor bought by interest. Amid the numerous assaults of its enemies, which it only laughs at—this Magazine has made a sound stand for sound, honest, and wholesome criticism; and the patronage of the public increases, the zeal of the publisher and the improvement of his pages shall increase in a corresponding degree.

In each Number will be found one or more papers on literary and points of Doctrinal Controversy. Politics, Tales, Dramas, and Sentimental Strictures, Criticisms, Poetry, and Humorous and Satirical Compositions, comprising the remains of each Number. In addition to these, are given full-length Sketches, the most prominent of our Literary Characters, with short Biographies, and Descriptive Notices.
 Of some of the Numbers, second, and of others third, &c. two have been reviewed; and the work, which has been published either in Numbers, or bound in cloth, and letters may be had of the Publisher, or, by order, of any Bookseller or Newsman in the kingdom; by whom, also, Subscribers' names are received, and the Numbers supplied monthly. Price Two Shillings and Sixpence.
 215, Regent Street & Nov. 1851.

SATURDAY, DECEMBER 3, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Traditions of Lancashire. Second Series. By J. Roby, M.R.S.L. 2 vols. 8vo. London, 1831. Longman and Co.

We have anticipated with pleasure the appearance of Mr. Roby's second series of Lancashire Traditions; we were prepared for a beautiful pictorial work, both by the preceding series, and by the plates reviewed some weeks ago under our head of "Fine Arts;" and we looked for literary variety and entertainment throughout—nor have we been disappointed; though other claims upon our notice in this *Gazette* prevent us from going into the grounds of our judgment, or quoting so largely as we could wish from these clever and ingenious volumes.

Taking up, as before, some of the remarkable traditions of a county rich in such memorials, Mr. Roby first gives the facts as they are handed down to us; he then dramatises them, or works them into narrative—in two or three instances founds ballads upon them—and thus vividly revives the impressions of times long gone by,—his tales being as true as history, and yet often possessing the animation of romance. We have thus "Clitheroe," a story of Roger de Lacy, the famous Constable of Cheshire; * the "Grey Man of the Wood," a singular legend of Henry VI.; "The Fairies' Chapel," a fairy tradition in the Byron family; "The Luck of Muncaster," in the nice old ballad style; "Peel of Fouldrey," an important event of the time of Henry VII. of great historical curiosity; "Dule upo' Dun," a whimsical anecdote; "Windleshaw Abbey," relating to Prince Rupert; "Clegg Hall," another good tradition; "George Fox," entertaining particulars of the early times of the Quakers; and others, more or less light, demoniacal, tragic, or superstitious, as the occasion may be.

In the midst of antiquarian lore and the author's own fancies, we are sadly at a loss how to find a specimen suited to our columns, and sufficient to afford a fair taste of his qualities. We are driven of necessity to the shortest, and the "Dead Man's Hand" is offered to us—Bryn Hall is the place.

"Here was a Roman Catholic chapel, and a priest, who continued long after the family had departed, having in his custody the hand mentioned in the following pages. It is still kept by them, or rather by the priest, who now resides at Garswood. Preserved with great care, in a white silk bag, it is still resorted to by many diseased persons, and wonderful cures are said to have been wrought by this saintly relic. It is called the Hand of Father Arrowsmith,—a priest, who is said to have been put to death at Lancaster for his religion, in the time of William III. When about to suffer, he desired his spiritual attendant to cut off his right hand,

which should then have the power to work miraculous cures on those who had faith to believe in its efficacy. Not many years ago, a female, sick of the small pox, had it lying in bed with her every night for six weeks, in order to effect her recovery, which took place. A poor lad, living in Withy Grove, Manchester, afflicted with scrofulous sores, was rubbed with it; and, though it has been said he was miraculously restored, yet, upon inquiry, the assertion was found incorrect, inasmuch as he died in about a fortnight after the operation. Not less devoid of truth is the tradition that Arrowsmith was hanged for witnessing a good confession. Having been found guilty of a rape, in all probability this story of his martyrdom and miraculous attestation to the truth of the cause for which he suffered, were contrived for the purpose of preventing the scandal that might have come upon the church through the delinquency of an unworthy member. One of the family of the Kenyons attended as under-sheriff at the execution; and it is said that he refused the culprit some trifling favour at the gallows, whereupon Arrowsmith denounced a curse upon him—to wit, that whilst the family could boast of an heir, so long they should never want a cripple; which prediction was supposed by the credulous to have been literally fulfilled."

The "Peel of Fouldrey" relates to the occupation of that fortress by Lambert Simnel, when he undertook his fruitless expedition to claim the crown of England, as the representative of the house of York; and the chances by which the Abbot of Furness Abbey is represented to have procured him and his followers to leave that impregnable hold, are extremely well wrought up by Mr. Roby. His opening account of it is so accurate as well as picturesque, that we shall copy it.

"It was in the 'merrie month of May,' in the year 1487, scarcely two years after Richard's overthrow at Bosworth, and Earl Richmond's usurpation of the English crown by the title of King Henry the Seventh, that a great armament, landing on the barren island of Fouldrey, took possession of the castle—a fortress of great strength, commanding the entrance to the bay of Morecambe, and a position of considerable importance to the invaders. It occupied, with the outworks and defences, nearly the whole area of the island—a few acres only; two or three fishermen's huts, at that time, being irregularly scattered on the beach below. Built by the monks of Furness, in the first year of Edward III., as a retreat from the ravages of the Scots, and a formidable barrier against their approaches by sea, it was now unexpectedly wrested from its owners, becoming a point of resistance from whence the formidable power of Henry might be withstood, and, in the end, successfully opposed. A royal banner floated from the battlements—the fortress had been formally taken into possession by the invaders in the name of their king, previously proclaimed at Dublin by the title of Edward the Sixth. The youth was crowned there with a diadem taken from an image of

the Virgin—priests and nobles espousing his cause with more than ordinary enthusiasm; and Henry, in the second year of his reign, was threatened, from a source as unexpected as it was deemed contemptible, with the loss of his ill-gotten sovereignty."

We must, until next Saturday, be content with a few farther insulated passages.

"Lambert Simnel, according to some historians, was the real name of this 'pretender;' but there be others who scruple not to assert, that he was in reality the unfortunate Earl of Warwick, son to Clarence, elder brother of Richard III.; and that he had made his escape from the Tower, where he long suffered an ignominious confinement by the cruel policy of Henry. The prior claims of this young prince to the English crown could not be doubted; and Margaret, the 'bold' duchess of Burgundy, sister to Edward IV., had furnished the invader with a body of two thousand chosen Flemish troops, commanded by Martin Swartz, a brave and experienced officer. With them came the Earl of Lincoln, related to Edward IV. by intermarriage with Elizabeth, the king's eldest sister. This nobleman had long entertained ambitious views towards the crown; his uncle Richard, it is said, in default of issue to himself, having expressed the intention of declaring Lincoln his successor. The Lord Lovel, too, a bitter enemy of the reigning prince, who had fled to the court of Burgundy before-time for protection, was intrusted with a command in the expedition. To these were joined the Earl of Kildare, the king's deputy for Ireland, with several others of the nobility from the sister kingdom. The countenance thus unexpectedly given to the rebellion by persons of the highest rank, and the great accession of military force from abroad, raised the courage and exultation of the Irish to such a pitch, that they threatened to overrun England, nothing doubting but their restless and disaffected spirit would be fully met by a similar disposition on the part of those whom they invaded. In supposing that the inhabitants in the north of England, and especially in Lancashire, would immediately join their standard, they had not calculated wisely. The king, in crushing the hopes of the Yorkists, had made himself, at that period, too popular in the county—the reluctance, too, which it may be supposed that Englishmen would feel in identifying themselves with a troop of foreign adventurers, as well as their general animosity against the Irish, to whom the 'northerns' never bore any good will, being too near neighbours to agree,—these circumstances taken into account, the ultimate failure of the expedition might have been easily prognosticated. Sir Thomas Broughton, a gentleman of some note in Furness, was the only person of weight and influence in the county who joined their standard—and he soon found himself a loser by his defection."

The following is a fair specimen of the descriptive:—

"The evening was dark and lowering; the

* *Apocryphal des bottles*: as the author states he has done all he intends with Lancashire; let us advise him to proceed next into Cheshire, a county fully as rich in materials for his purpose.—Ed. L. G.

sky broken into wild irregular masses of red and angry clouds. The sun, after throwing one fierce look over the broad and troubled sea, had sunk behind a hard, huge battlement of cloud, on the round waving edges of which ran a bright burning rim, that looked like a train of fire ignited by the glowing luminary behind. The beach round the little island of Fouldrey is mostly covered with pebbles, thrown up by the tide, occasionally intermingled with rock and patches of dark verdure. A few boats may be seen with their equipments, and two or three straggling nets upon the shore. A distant sail occasionally glides across the horizon; but the usual aspect is that of solitude, still and uninterrupted—the abode of sterility and sadness. Now, the narrow bay by the island was glittering with gallant streamers. Ships of war, in all their pride and panoply, majestically reposed upon its bosom. All was bustle and impatience. The trumpet note of war brayed fiercely from the battlements. Incessant was the march of troops in various directions. Tents were pitched before the castle; guards were appointed; and this hitherto peaceful and solitary spot resounded with the din of arms, and the hoarse clang of preparation for the approaching strife. Messengers were constantly passing to and from the main land; the insignia of royalty were ostentatiously displayed; and the captains and leaders within the fortress fulfilled the duties of this mimic and motley court, in honour of their anticipated sovereign."

After a strange night-alarm, with which the whole machinery of the plot is connected—

"With the morning dawn came Sir Thomas Broughton. A grand council was appointed for that day, in which the final arrangement of their plans was to be discussed. A royal banquet was prepared, and the Flemish gunners were to give a specimen of their craft from the battlements. The forenoon came on chill and squally, with a low scud driving rapidly from the west. A drizzling rain was the result, which increased with the coming tide. The little island was covered with tents, forming an encampment of no mean extent and appearance. Sir Thomas, with a few attendants, after being ferried over the channel which separates the island Fouldrey from the main land, was conducted through avenues of tents and armed men. The Flemish soldiers, fierce and almost motionless, looked like an array of grim statues. The Irish levies, in a state of more lax discipline, were collected in merry groups, whiling away the time in thriftless and noisy discourse. Sir Thomas Broughton, descended from an Anglo-Saxon family of great antiquity, was, by virtue of this hereditary and aboriginal descent, of a proud and pompous bearing. Being allied to most of the principal families in these parts, he was won over, by solicitation from the Duchess of Burgundy, as one of the confederates in her attempt to restore the line of York to the English crown. Fond of shew, and careful as to his own personal appearance, he was clad in a steel coat of great beauty; this ponderous form of defence having been brought to great perfection in the preceding reign. His sword-belt was so disposed, that the weapon remained in front, while a dagger was attached to the right hip. Over his armour he wore a scarlet cloak; and, as he strode proudly up the avenues to the gate, he looked as though he felt that on his fiat alone depended the very existence of those he beheld. After he had passed the first drawbridge into the outer court, or bayle, a band of archers, drawn up in full array, opened their

ranks to receive this puissant chieftain. These were the most efficient of the troops, and partly English, having been brought from Ireland by the deputy. They were clad in shirts of chain-mail, with wide sleeves, over which was a small vest of red cloth, laced in front. They had tight hose on their legs, and braces on their left arms. Behind them, and on each side, were part of the infantry, consisting of billmen and halberdiers; but the most formidable-looking soldiers were the Flemish gunners, or arquebusers—so named from the barbarous Latin word *arcubus*, evidently derived from the Italian *arcabusa*; i. e. a bow with a tube or hole. It was made with a stock and trigger, in imitation of the crossbow. The match, no longer applied by the hand to the touch-hole, was fixed into a cock, which was brought down to the pan by the motion of the trigger. This, being at the time a recent invention, excited no little curiosity and admiration. At the inner court, and near the main entrance to the keep, Sir Thomas was received in great state by the Earl of Lincoln, whose high, but easy and pleasant, bearing bespoke him to have been long the inmate and follower of courts; while the stiff attitudes and formal demeanour of Sir Thomas were rendered more apparent by the contrast."

Our fair readers will excuse us for not entering upon the natural-supernatural events of this tale: and having exhibited the author's powers in various ways, we take our leave, till next week, with "hattie commendacyons."

Tales of my Landlord. Fourth and last Series. 4 vols. 12mo. Edinburgh, 1831, Cadell; London, Whittaker and Co.

NEVER was a work more completely out of the pale of criticism:—we shall quote its author's concluding address, as the only introduction to the pages before us.

"The gentle reader is acquainted, that these are, in all probability, the last tales which it will be the lot of the author to submit to the public. He is now on the eve of visiting foreign parts; a ship of war is commissioned by its royal master to carry the Author of Waverley to climates in which he may possibly obtain such a restoration of health as may serve him to spin his thread to an end in his own country. Had he continued to prosecute his usual literary labours, it seems indeed probable, that at the term of years he has already attained, the bowl, to use the pathetic language of Scripture, would have been broken at the fountain; and little can one, who has enjoyed on the whole an uncommon share of the most inestimable of worldly blessings, be entitled to complain, that life, advancing to its period, should be attended with its usual proportions of shadows and storms. They have affected him at least in no more painful manner than is inseparable from the discharge of this part of the debt of humanity. Of those whose relation to him in the ranks of life might have insured him their sympathy under indisposition, many are now no more; and those who may yet follow in his wake, are entitled to expect, in bearing inevitable evils, an example of firmness and patience, more especially on the part of one who has enjoyed no small good fortune during the course of his pilgrimage. The public have claims on his gratitude, for which the Author of Waverley has no adequate means of expression; but he may be permitted to hope, that the powers of his mind, such as they are, may not have a different date from those of his body; and that he may again meet his patronising

friends, if not exactly in his old fashion of literature, at least in some branch, which may at call forth the remark, that

"Superfluous lags the veteran on the stage."

Upwards of a hundred volumes has Sir Walter Scott contributed to the literature of his country: he has made his own land classical with the song or story now so indelibly associated with its lakes and hills; he has founded a new school—and with regard to novels and romances, he has done for them what Augustus did for Rome,—he found it a city of mud, he left it a city of marble. We call upon his readers to remember the many hours they have passed a delight over his volumes, and what an aggregate of enjoyment will they make in human existence! There are two tales in the present series; the first, *Count Robert of Paris*, has its time and place the arrival of the Crusaders at Constantinople, and Count Robert is the brave baron whom historians record to have taken possession of the emperor's throne, in the presence of the assembled court, when he was expected to have knelt in homage. We cannot do better than extract that important scene in his life—his marriage.

"Brenhilda, countess of Paris, was one of those stalwart dames who willingly bared themselves in the front of battle, which, during the first crusade, was as common as it was possible for a very unnatural custom to be, and, in fact, gave the real instances of the Marphissas and Bradamantes, whom the writers of romance delighted to paint, assigning them sometimes the advantage of invulnerable armour, or a spear whose thrust did not admit of being resisted, in order to add the improbability of the weaker sex being so frequently victorious over the male part of the creation. But the spell of Brenhilda was a more simple nature, and rested chiefly on her great beauty. From a girl, she despised the pursuits of her sex; and she who refused to become suitors for the hand of the young Lady of Aspramonte, to which wife she had succeeded, and which perhaps encouraged her in her fancy, received for answer, that they must first merit it by the good behaviour in the lists. The father of Brenhilda was dead; her mother was of a gentle temper, and easily kept under management by the young lady herself. Brenhilda, numerous suitors readily agreed to terms which were too much according to the manners of the age to be disputed. A tournament was held at the castle of Aspramonte, in which one of the gallant assembly rolled headlong from his successful rivals, and withdrew from the lists mortified and disappointed. The successful party among the suitors were exposed to be summoned to joust among themselves. As they were surprised at being made acquainted with the lady's further will. She required to wear armour herself, to wield a lance, and back a steed, and prayed the knights that they would permit a lady, whom they presented to honour so highly, to mingle in their game of chivalry. The young knights courtously received their young mistress in the lists, and smiled at the idea of her holding them triumphantly against so many gallant champions of the other sex. But the vapours and attendants of the count, her father, smiled to each other, and intimated a different result: that the gallants anticipated. The knights who encountered the fair Brenhilda were one by one stretched on the sand; nor was it to be doubted, that the situation of tilting with one of the handsomest women of the time, was an extremely embarrassing one. Each youth was

bent to withhold his charge in full volley, to cause his steed to swerve at the full shock, or in some other way to finish from doing the utmost which was necessary to gain the victory, lest, in so gaining it, he might cause irreparable injury to the beautiful opponent he tilted with. But the Lady of Aspramonte was not one who could be conquered by less than the exertion of the whole strength and talents of the victor. The defeated suitors departed from the lists the more mortified at their discomfiture, because Robert of Paris arrived at sunset, and, understanding what was going forward, sent his name to the barriers, as that of a knight who would willingly forego the reward of the tournament, in case he had the fortune to gain it, declaring, that neither lands nor ladies' charms were what he came thither to seek. Brenhilda, piqued and mortified, chose a new lance, mounted her best steed, and advanced into the lists as one determined to avenge upon the new assailant's brow the slight of her charms which he seemed to express. But whether her displeasure had somewhat interfered with her usual skill, or whether she had, like others of her sex, felt a partiality towards one whose heart was not particularly set upon gaining hers—or whether, as is often said on such occasions, her fated hour was come, so it was that Count Robert tilted with his usual address and good fortune. Brenhilda of Aspramonte was unhorsed and unhelmed, and stretched on the earth; and the beautiful face, which faded from very red to deadly pale before the eyes of the victor, predated its natural effect in raising the value of his conquest. He would, in conformity with his resolution, have left the castle, after having mortified the vanity of the lady; but her mother opportunely interposed; and when she had satisfied herself that no serious injury had been sustained by the young heiress, she returned her thanks to the stranger knight who had taught her daughter a lesson, which, she trusted, she would not easily forget. Thus tempted to do what he secretly wished, Count Robert gave ear to those sentiments, which naturally whispered to him to be in no hurry to withdraw. He was of the blood of Charlemagne, and, what was still of more consequence in the young lady's eyes, one of the most renowned of Norman knights in that jousting day. After a residence of ten days in the castle of Aspramonte, the bride and bridegroom set out, for such was Count Robert's will, with a competent train, to Our Lady of the Broken Lances, where it pleased him to be wedded. Two knights, who were waiting to do battle, as was the custom of the place, were rather disappointed at the nature of the cavalcade, which seemed to interrupt their purpose. But greatly were they surprised when they received a cartel from the betrothed couple, offering to substitute their own persons in the room of other antagonists, and congratulating themselves in commencing their married life in a manner so consistent with that which they had hitherto led. They were victorious as usual; and the only persons having occasion to rue the complaisance of the count and his bride, were the two strangers, one of whom broke an arm in the rencontre, and the other dislocated a collar-bone."

In order to revenge the insult offered, Agelastes, one of the Greek court, endeavours to draw the count into the power of his enemies, and tells a tale of enchantment—a princess cast into a magic sleep by an offended sage—which leads to the ensuing scene, written with that

nature and spirit which give such life to Scott's delineations.

"A sleep like that of death fell upon them, and was not removed. Most of the inhabitants left the island; the few who remained were cautious how they approached the castle, and watched until some bold adventurer should bring that happy awakening which the speech of the sorcerer seemed in some degree to intimate. Never seemed there a fairer opportunity for that awakening to take place than when the proud step of Artavan de Hautlieu was placed upon those enchanted courts. On the left lay the palace and donjon-keep; but the right, more attractive, seemed to invite to the apartment of the women. At a side door, reclined on a couch, two guards of the harem, with their naked swords grasped in their hands, and features fiendishly contorted between sleep and dissolution, seemed to menace death to any who should venture to approach. This threat deterred not Artavan de Hautlieu. He approached the entrance, when the doors, like those of the great entrance to the castle, made themselves instantly accessible to him. A guard-room of the same effeminate soldiers received him, nor could the strictest examination have discovered to him whether it was sleep or death which arrested the eyes that seemed to look upon and prohibit his advance. Unheeding the presence of these ghastly sentinels, Artavan pressed forward into an inner apartment, where female slaves of the most distinguished beauty were visible in the attitude of those who had already assumed their dress for the night. There was much in this scene which might have arrested so young a pilgrim as Artavan de Hautlieu; but his heart was fixed upon achieving the freedom of the beautiful princess, nor did he suffer himself to be withdrawn from that object by any inferior consideration. He passed on, therefore, to a little ivory door, which, after a moment's pause, as if in maidenly hesitation, gave way like the rest, and yielded access to the sleeping apartment of the princess herself. A soft light, resembling that of evening, penetrated into a chamber where every thing seemed contrived to exalt the luxury of slumber. The heaps of cushions, which formed a stately bed, seemed rather to be touched than impressed by the form of a nymph of fifteen, the renowned Princess of Zulichium." "Without interrupting you, good father," said the Countess Brenhilda, "it seems to me that we can comprehend the picture of a woman asleep without much dilating upon it, and that such a subject is little recommended either by our age or by yours." "Pardon me, noble lady," answered Agelastes, "the most approved part of my story has ever been this passage, and while I now suppress it in obedience to your command, bear notice, I pray you, that I sacrifice the most beautiful part of the tale." "Brenhilda," added the count, "I am surprised you think of interrupting a story which has hitherto proceeded with so much fire; the telling of a few words more or less will surely have a much greater influence upon the sense of the narrative, than such an addition can possibly possess over our sentiments of action." "As you will," said his lady, throwing herself carelessly back upon the seat; "but methinks the worthy father protracts this discourse, till it becomes of a nature more trifling than interesting." "Brenhilda," said the count, "this is the first time I have remarked in you a woman's weakness." "I may as well say, Count Robert, that it is the first time," answered Brenhilda, "that you have shown to

me the inconstancy of your sex." "Gods and goddesses," said the philosopher, "was ever known a quarrel more absurdly founded! The countess is jealous of one whom her husband probably never will see, nor is there any prospect that the Princess of Zulichium will be hereafter better known to the modern world, than if the curtain hung before her tomb." "Proceed," said Count Robert of Paris; "if Sir Artavan of Hautlieu has not accomplished the enfranchisement of the Princess of Zulichium, I make a vow to our Lady of the Broken Lances."—"Remember," said his lady, interfering, "that you are already under a vow to free the Sepulchre of God; and to that, methinks, all lighter engagements might give place." "Well, lady—well," said Count Robert, but half satisfied with this interference, "I will not engage myself, you may be assured, on any adventure which may claim precedence of the enterprise of the Holy Sepulchre, to which we are all bound." "Alas!" said Agelastes, "the distance of Zulichium from the speediest route to the Sepulchre is so small, that"—"Worthy father," said the countess, "we will, if it pleases you, hear your tale to an end, and then determine what we will do. We Norman ladies, descendants of the old Germans, claim a voice with our lords in the council which precedes the battle; nor has our assistance in the conflict been deemed altogether useless." The tone in which this was spoken conveyed an awkward innuendo to the philosopher, who began to foresee that the guidance of the Norman knight would be more difficult than he had foreseen, while his consort remained by his side. He took up, therefore, his oratory on somewhat a lower key than before, and avoided those warm descriptions which had given some offence to the Countess Brenhilda. "Sir Artavan de Hautlieu," says the story, "considered in what way he should accost the sleeping damsel, when it occurred to him in what manner the charm would be most likely to be reversed. I am in your judgment, fair lady, if he judged wrong in resolving that the method of his address should be a kiss upon the lips." The colour of Brenhilda was somewhat heightened, but she did not deem the observation worthy of notice. "Never had so innocent an action," continued the philosopher, "an effect more horrible. The delightful light of a summer evening was instantly changed into a strange lurid hue, which, infected with sulphur, seemed to breathe suffocation through the apartment. The rich hangings and splendid furniture of the chamber, the very walls themselves, were changed into huge stones tossed together at random, like the inside of a wild beast's den; nor was the den without an inhabitant. The beautiful and innocent lips to which Artavan de Hautlieu had approached his own, were now changed into the hideous and bizarre form and bestial aspect of a fiery dragon. A moment he hovered upon the wing, and it is said, had Sir Artavan found courage to repeat his salute three times, he would then have remained master of all the wealth and of the disenchanted princess. But the opportunity was lost; and the dragon, or the creature who seemed such, sailed out at a side window upon its broad pennons, uttering loud wails of disappointment." Here ended the story of Agelastes. "The princess," he said, "is still supposed to abide her doom in the Island of Zulichium, and several knights have undertaken the adventure; but I know not whether it was the fear of saluting the sleeping maiden, or that of approaching the dragon into which

she was transformed; but so it is, the spell remains unachieved. I know the way, and if you say the word, you may be to-morrow on the road to the castle of enchantment.' The countess heard this proposal with the deepest anxiety; for she knew that she might, by opposition, determine her husband irrevocably upon following out the enterprise. She stood therefore with a timid and bashful look, strange in a person whose bearing was generally so dauntless, and prudently left it to the uninfluenced mind of Count Robert to form the resolution which should best please him. 'Brenhilda,' he said, taking her hand, 'fame and honour are dear to thy husband as ever they were to knight who buckled a brand upon his side. Thou hast done, perhaps, I may say, for me, what I might in vain have looked for from ladies of thy condition; and therefore thou mayest well expect a casting voice in such points of deliberation. Why dost thou wander by the side of a foreign and unhealthy shore, instead of the banks of the lovely Seine? Why dost thou wear a dress unusual to thy sex? Why dost thou seek death, and think it little, in comparison of shame? Why? but that the Count of Paris may have a bride worthy of him. Dost thou think that this affection is thrown away? No, by the saints! Thy knight repays it as he best ought, and sacrifices to thee every thought which thy affection may less than entirely approve!' Poor Brenhilda, confused as she was by the various emotions with which she was agitated, now in vain endeavoured to maintain the heroic deportment which her character as an Amazon required from her. She attempted to assume the proud and lofty look which was properly her own, but failing in the effort, she threw herself into the count's arms, hung round his neck, and wept like a village maiden whose true love is pressed for the wars. Her husband, a little ashamed, while he was much moved by this burst of affection in one to whose character it seemed an unusual attribute, was, at the same time, pleased and proud that he could have awakened an affection so genuine and so gentle in a soul so high-spirited and so unbending. 'Not thus,' he said, 'my Brenhilda! I would not have it thus, either for thine own sake or for mine. Do not let this wise old man suppose that thy heart is made of the malleable stuff which forms that of other maidens; and apologise to him, as may well become thee, for having prevented my undertaking the adventure of Zulichium, which he recommends.' It was not easy for Brenhilda to recover herself, after having afforded so notable an instance how nature can vindicate her rights, with whatever rigour she may have been disciplined and tyrannised over. With a look of ineffable affection, she disjoined herself from her husband, still keeping hold of his hand, and turning to the old man with a countenance in which the half-effaced tears were succeeded by smiles of pleasure and of modesty, she spoke to Agelastes as she would to a person whom she respected, and towards whom she had some offence to atone. 'Father,' she said, respectfully, 'be not angry with me that I should have been an obstacle to one of the best knights that ever spurred steed, undertaking the enterprise of thine enchanted princess; but the truth is, that in our land, where knighthood and religion agree in permitting only one lady-love and one lady-wife, we do not quite so willingly see our husbands run into danger—especially of that kind where lonely ladies are the parties relieved—and—and kisses are the ransom paid. I have

as much confidence in my Robert's fidelity, as a lady can have in a loving knight, but still—' 'Lovely lady,' said Agelastes, who, notwithstanding his highly artificial character, could not help being moved by the simple and sincere affection of the handsome young pair, 'you have done no evil. The state of the princess is no worse than it was, and there cannot be a doubt that the knight fated to relieve her, will appear at the destined period.' The countess smiled sadly, and shook her head. 'You do not know,' she said, 'how powerful is the aid of which I have unhappily deprived this unfortunate lady, by a jealousy which I now feel to have been alike paltry and unworthy; and, such is my regret, that I could find in my heart to retract my opposition to Count Robert undertaking this adventure.' She looked at her husband with some anxiety, as one that had made an offer she would not willingly see accepted, and did not recover her courage until he said, decidedly, 'Brenhilda, that may not be.' 'And, why, then, may not Brenhilda herself take the adventure,' continued the countess, 'since she can neither fear the charms of the princess, nor the terrors of the dragon?' 'Lady,' said Agelastes, the princess must be awakened by the kiss of love, and not by that of friendship. 'A sufficient reason,' said the countess, smiling, 'why a lady may not wish her lord to go forth upon an adventure of which the conditions are so regulated.'"

The next tale, *Castle Dangerous*, is likely, we should think, to find much favour on the other side of the Tweed: it is a record of a passage in the gallant resistance made by the Scots against the aggressions of the English in the days of the Bruce; and *Castle Dangerous* is a strong-hold of the Douglas. Both tales are vivid illustrations of the fantastic honour and real courage of the age of chivalry. Most of our readers may remember the beginning of the touching address Sir Walter wrote for Kemble on his leaving the stage—it might serve for his own parting words:

"As the worn warhorse at the trumpet's sound
Erects his mane, and, neighing, paws the ground,
Disdains the ease his generous lord assigns,
And longs to rush on the embattled lines;
So I, your plaudits ringing on my ear,
Can scarce believe in a departure near—
But, like the Roman in the capital,
I must adjust my mantle ere I fall!"

That a long space of ease and comfort may yet be in store for "the Ariosto of the North," must be the earnest hope of all who now feel towards him what he so well deserves,—gratitude and sympathy.

Letters from the North of Europe; or, a Journal of Travels in Holland, Denmark, Norway, Sweden, Finland, Russia, Prussia, and Saxony. By C. B. Elliott, Esq. 8vo. pp. 475. London, 1831. Colburn and Bentley.

THIS is one of those remarkably pleasant tours which an intelligent gentleman, who has seen much of the world, is alone calculated to write—one of those productions which engage the attention and do not fatigue it, and which we read from first to last, with the agreeable sensation that we are gathering the information of pretty extensive travel, easily by our fireside.

Mr. Elliott visited Holland, Hamburgh, Denmark, Sweden, Norway, Finland, Russia, Prussia, and parts of Germany—every where, but particularly in Norway, viewing the natives and their manners with the eye of a practised observer; and furnishing us with sketchy pictures—of course not all new, but all possessing considerable interest. We shall illustrate

this by a few quotations, from various quarters of the northern continent.

"The 18th of June is kept holy by the Dutch (nearly all of whom are Protestants), to commemorate the mercy of God in the respite of the battle of Waterloo. I thought the English might profit by such an example."

Now to Denmark.

"The cemetery of the Danish capital is a miniature of that of Père la Chaise. The graves of the young and the aged, the warrior and the bride, are all decked with flowers whose name or character qualifies them to serve as emblems of grief or of perpetual remembrance. Some of the epitaphs and devices are pretty. One motto consists of the simple and familiar words, 'Not lost, but gone before;' another, 'I shall see you again;' a third, in Danish verse, may be thus translated—'Rest, O sweetly rest, dear! in the garden of the dead, amid graves and flowers and tears, till little angels, bearing the 'forget-me-not,' shall summon me to join thee in eternity.' One grave contains the relics of a mother whose husband and six orphans are represented, in marble exquisitely wrought, as doves brooding over their sorrows and the dust of her they loved. The ages of the little ones are represented by the size of the nestlings; and the widowed mate covers with his wings the last half-fledged pledge of conjugal love. The scenery around is beautiful. The cypress and the myrtle are wanting; or, as I gazed, I could have fancied that in that spot, and over that tomb, were written those exquisite lines which tell of 'the love of the turtle.' The Jews have here, as always, a separate burying-ground. Their corpses are interred in a standing position, with the face turned towards Jerusalem."

The following is part of a very interesting description of a journey across the mountains in Norway.

"The sun set in the N.N.W. For two hours we pursued our course by twilight over a country wilder than imagination can conceive. Barren rocks and broad morasses were varied only now and then by heaths and lichens thinly scattered. Yet sometimes a hill would rise to view, gilded with rein-deer moss, like crystals of the flour of sulphur, and shining with a beauty peculiar to itself. The weather was inclement; it rained hard, and the cold was intense. Our servant had dropped behind with fatigue; and for two successive hours the guide had been saying that we were within a mile of a hut which would afford something like shelter for the night. The minutes dragged heavily along. Hope and fear succeeded each other in rapid alternation; and the promised haven seemed to retreat before us. At length, an hour before midnight, we reached it, and perhaps never entered the home of our fathers with so much thankfulness as we did this pile of stones; for, suspecting that the guide had lost his way, we were anticipating continued exposure to the tempestuous elements. The stones forming the hut, if such a title it could merit, were rudely and irregularly put together. A hole in the centre let out the smoke and admitted the fresh air. The former had no other exit; the latter had free entrance on every side. Four women and three children were lying on two litters which nearly filled the hut. The intermediate space was occupied by a calf. Ranged round the sides were bowls of milk and cream—the produce of a herd of cows, whose lowing indicated an unaccustomed intrusion. The smell and filth were almost intolerable; but our minds were braced to the encounter. Three horse-blankets

were laid on the wet ground, and our feet were turned towards the smoking embers of the fire. Thus, wrapped in cloaks, we slept a little; but the rain beat in so violently that it was not possible to repose for any length of time. The morning dawned, disclosing the full wretchedness of the hovel which darkness had covered with a friendly veil. The squalid filth of the women was exceeded, if possible, by that of the naked children; and we agreed that the bleak mountains, under a sky emptying its watery freight before a cutting wind, were preferable to such a resting-place. After breakfasting on smoked bacon and some husky rye cakes, whose dryness and inequalities, but for a thick layer of cream, would have impeded their progress down the throat—we renewed our journey at nine in the morning. Two hours' halt was granted to the patient animals. After ten hours of hard marching over trackless mountains, on the limits of perpetual congelation, and in a drenching rain, we accomplished three and twenty miles. With the exception of a herd of rein-deer, perhaps a hundred in number, who fled as we disturbed their mossy meal, and the plovers, whose plaintive cry consorted well with the discomfort of our condition—scarcely a sign of animal or vegetable existence was to be seen. Our course the preceding day was W. by S., and the mountain where we stopped the guide called Reschion. This day we travelled west, and to the spot attained at night (whether capriciously or otherwise I cannot say) he gave the name of Feelsihoon. Descending a few hundred feet, we found a pile of stones similar to that already described, but without a tenant. It was probably raised by some venturesome huntsmen, who, living in the nearest and most elevated village on the north-east of the Hardanger, and exploring in successive journeys a little and a little more of the inhospitable feld, have fixed this as the limit of their bold essay; and who, perhaps, annually pass a night here, to enjoy the chase of the deer. Whatever its origin, it screened us in some degree from the severity of the cold, which at this altitude, with patches of snow on every side, is intense even in the day-time."

A few farther extracts respecting Norway will be found entertaining.

"A particular species of sweet cheese, highly prized here, is produced on special occasions. It is called '*gammelen orse*,' or old cheese, which Mr. Janson told us had been converted by the ingenuity of some English traveller into '*gammela Norse*,' or old Norway. The mistake, on which he seemed to say some fable has been built, has afforded, as we have likewise heard in other quarters, much amusement to the natives."

"The Storthing is now sitting. I have just been to the assembly. It presents a curious spectacle. Some of the members are dressed in coarse woollen cloth like blanketing; with hair hanging profusely over the shoulders, broad-brimmed hats of various shapes, and boots of a certain size. The whole costume, as well as their humble mode of speaking, or rather reading their opinions, attests the unsophisticated simplicity of these worthy sons of our northern ancestry. They tell a tale of days once known in England, before the progress of luxury had introduced abuses which call for a corrective hand; the hand of a moderate, judicious, and Christian reform. After the labours of the day, the members all dine together in a large room on the first-floor of the hotel in which I lodge. The table is laid out neatly but not sumptuously, and decorated with flowers; a simple and beautiful substitute

for the silver ornaments of more luxurious countries. The constitution is purely democratic. Abhorrence of an aristocracy is carried to such an extent, that only three of the ancient nobility are left in Norway; and their titles will die with them, or with their sons. Moral excellence is hereafter to form the only distinction between man and man. The established form of religion is Lutheran; nor are there many sectarians. The churches are very plain, built generally of wood, and little ornamented inside or out. Norway is one of the few countries in which no Jews are found. When silver mines were first discovered, a foolish prejudice prevailed, that these lovers of money would secure and retain possession of the coin; they were therefore expelled. Thus here, as every where, the sons of Judah are a 'by-word' among the people; an example of retributive justice and accomplished prophecy. I have already casually expressed, on two or three occasions, my opinion of the national character of the Norse, nor can I add much to what has been said on that subject. Like all mountaineers, they are devotedly attached to their country; and inspire the love of liberty with the free air of their mountains. The better orders are kind and hospitable, opening to the traveller their houses and their hearts. Among the lower classes, on the contrary, there is an avidity of money, with an indifference as to the means of acquiring it, that reminds one of Italy. They are addicted to drinking; and the climate, rendering fermented liquor perhaps in some degree necessary, is pleaded in excuse for the indulgence of an odious vice. The men are taller than the Swedes; perhaps nearly as tall as ourselves; and the women in proportion. Both sexes are very fair, with teeth of virgin white, light auburn hair, and cheeks in which the eloquent blood bespeaks health, happiness, and freedom. The general mode of salutation is by shaking hands, which they do with great cordiality. The common food of the peasantry is milk, cheese, butter, and oat or rye cakes, about the size of pancakes, but a little thicker, (like the Indian *chipattees*), which they call in the Norse tongue '*flat-brod*.' To this simple diet some piquant dried fish is added, such as herring or smoked salmon. The latter, cut in slices, affords a delicious morsel even to an Englishman. I am told that some of the numerous mosses with which the mountains abound are eaten in times of scarcity; and that that called Icelandic moss, (*lichen Islandicus*), when boiled, yields a very nutritious gelatinous substance. The houses of the peasants swarm with vermin, which are secreted by the moss stuffed into the interstices of the logs that form the walls. Probably the mode of huddling together at night, adopted by these people, is attributable to the difficulty of securing themselves from loathsome insects. Something like a large box is placed in one corner of the room, with some straw and sheep-skins at the bottom. In this the whole family deposit themselves without distinction of sex or age. The better classes adopt the uncomfortable German mode of sleeping between two feather beds."

We must now pass to Sweden for a specimen.

"In one of the first stages in Sweden I was accompanied through a forest of firs by a fine girl of eighteen. She jumped up and took her seat behind with all the confidence of a man and the innocence of a child. At the end of the stage, she mounted her nag, and returned to the plough or the farm. There is a peculiar simplicity in the Scandinavians. They are unacquainted with some of the decorums, and

perhaps more of the evils, of a higher state of civilisation. In one house I entered, a girl of sixteen or seventeen, of great beauty of feature, was cooking the family meal, with no other garb than a petticoat. In another, two men and three women were distributed in three beds. My entrance did not disconcert them. One of the women arose, and procured me some milk; while the others only stretched themselves to look at the stranger. The men turned, and yawned; then composed themselves for 'a little more sleep and a little more slumber.'"

"One cannot but feel that Bernadotte is really a great man. His manners are affable, his countenance handsome, and his figure commanding, though not tall. He maintains but little state, and in Sweden is popular. He is reputed to have said—certainly with more vanity than good taste, 'I am so martial, that when I look in the glass I am frightened at myself.' The prince's features are not so regular, nor is his expression so open, as his father's: at the same time, there is something pleasing in his appearance."

Of Russia we can only afford a short conclusive extract.

"Innkeepers, English, German, and native, are so completely in the hands of the police, that not one of them is to be trusted. A person taking out a license to keep a hotel, virtually enlists himself, *ipso facto*, among the public spies. A man dares scarcely to confide in his own brother:—if Napoleon's saying be true, that every one has his price, he ought not; for the government will give any price to a spy. Neither the highest rank nor official situation secures its possessor against the operation of this corrupt system. It is rumoured that when *** was ambassador to this court, he found the lock of his writing-case had been tampered with; and so conscious of her insecurity was the late unfortunate Queen of Prussia, that during her residence at St. Petersburg she invariably carried on her person all her secret papers."

Here we close our pleasant task.

The Catechism of Health; or, Plain and Simple Rules for the Preservation of Health, and the Attainment of a Long Life: to which are added, Facts respecting the Nature, Treatment, and Prevention of Cholera. By A. B. Granville, M.D., &c. &c. 18mo. pp. 336. London, 1831. Colburn and Bentley.

THIS little volume comes forth very opportunely. Dr. Granville has had much experience in various quarters of Europe, as well as at home; and his opinions, addressed in plain terms to every capacity, are entitled to due consideration. The catechistical form is adopted as best suited to convey information to the middle and lower orders; and we have every topic connected with health and sickness, with medicine, diet, exercise, &c. &c., treated in a very useful and familiar manner. Amid the multitude, there are points respecting which a different judgment may be entertained; but the whole seems dictated by good common sense and practical knowledge.

It would be impossible for us to enter into the details of so many-formed a treatise; but we shall extract, by way of specimen, some of Dr. G.'s data touching the important and awful disorder which now fixes the public attention. We need only preface our quotations with saying that the doctor is a contagionist in plague—a non-contagionist in cholera; and that for the latter he strongly recommends

counter-irritants and blisters, a new embrocation and stimulating alkaline drops.

"The alarm which has been excited about cholera, and the ravages it commits, is indeed great; and, I will be free to say, unnecessarily exaggerated. . . . As I before stated,

while speaking of the passions, nothing predisposes us to become affected by prevailing epidemic disorders sooner than terror. . . . I consider it to be the duty of every well-wisher to the community, in the present emergency, to allay, if he have it in his power, the fever of the mind, which is, too frequently, the first stage of that of the body.

"Q. What is cholera?—A. The name given to a disease prevalent from time immemorial in every country in the civilised world, and making its appearance generally, and in its more ordinary form, at the close of the summer, during the autumn, or in the rainy season.

"Q. Does the name itself imply any thing that has a reference to the nature of the disease?—A. Not at all. The name is derived from two Greek words—the one meaning *bile*, the other to *flow*, and is meant to imply that this is a bilious disorder, or an overflow of bile—literally, a *bile-flux*—a fact questionable in all species of cholera, but nearly disproved in that severer form of the disorder which is now occupying so much of the public attention.

"Q. Then, *cholera morbus* means no more or less than bilious disorder; as one would say bilious fever or bilious complaint?—A. Just so. And you will immediately perceive the incorrectness of the name, when you shall have been informed that in the severer form of cholera, except in a few cases, bile does not make its appearance either at the outset or during the progress of the disease, but only at the commencement of the recovery.

"Q. But I have also heard the severer form of this disease named *spasmodic cholera*, and *Indian or Asiatic cholera*. Are those appellations more appropriate?—A. Neither of them is. The first would imply that *spasm* accompanies only the severer form of the disorder; whereas it is a symptom present in all species of cholera: while the second would equally mislead us, if it induced us to believe that the severer form of cholera is of Indian or Asiatic origin; for cases of the most fatal description of cholera have, from time to time, occurred accidentally, as well as *epidemic*ly, in all parts of the world, attended by every symptom which characterises the cholera at present raging in Europe. In 1821, an expedition sailed from Trieste, under the command of Baron Schimmelpenninck, for the purpose of circumnavigating the globe. It was, I believe, the first that the Austrian government had ever sent out on such an errand; but the accomplishment of its intention was thwarted by the spontaneous appearance of cholera, soon after the arrival of the expedition in warmer latitudes. It proved fatal, in a very short time, to nearly the whole of the crew, including the captain and the celebrated botanist Bohms. In 1600, cholera, in its severest form, made the tour of Europe, and destroyed a very large proportion of those who were attacked by it. The same complaint is now following something like the same course.

"Q. Then, I am to understand, that the cholera with which we are threatened as something new to this country, and against the expected importation of which from the continent, the *London Gazette*, of the 20th of Oct., contained sundry extraordinary rules and regulations, is only what is already known as cholera in England, or any where else; with this

difference, that its symptoms are more severe, its progress more rapid, and its results more fatal?—A. Exactly so.

"Q. Are there not some other distinguishing marks to be traced between the English and foreign severe cholera?—A. There may be in the intensity of some of the symptoms; but the same symptoms, both as to number and description, are present in the English as well as foreign cholera."

The doctor is severe upon the reports of the London Medical Board, of which he says:—

"They have made several reports, which have been published, and in which they come to conclusions that the events of a few subsequent weeks have shewn to have been precipitate; and they have recommended measures which the same events have proved to be useless, and consequently unnecessary."

The cause of the disease the doctor asserts to be, "a peculiar state, condition, and modification of the atmosphere we live in; a congeries of meteorological phenomena referable to the air and to the soil we dwell upon; in fact, a blight, a poison, an obnoxious something which is formed round about us—how, we know not—and which, moving with the atmosphere and spreading itself to different extents within it, shews its hostility to the human constitution whenever this is exposed to its direct and continued influence."

This produces, according to him, "excessive proneness to indigestion, with the formation of an acid of the most pungent and deleterious nature, probably nearly allied to muriatic acid, giving rise to the affection of the nerves," &c.

Then comes the *personal* for cure:—

"I place not the slightest faith in your Cajepout oil, camphor, oil of peppermint, or cinnamon—your pure stimulants, and all the cholera drugs which the late Board of Health have suddenly raised into notoriety by their recommendation, and through notoriety into a high price, which has proved the means of making the fortunes of some score of druggists. That which I recommend is simple, cheap, and I trust will be found intelligible as well as easy of execution. On its being ascertained, from the symptoms detailed in this work, that an individual has been attacked by cholera, let a wine-glassful of hot water, with twenty of the 'stimulating alkaline drops,'—of which I have left the prescription with a highly respectable chemist in London [Mr. Garden, of Oxford Street]—and thirty drops of laudanum, be given. This is to be repeated every twenty minutes, until some relief or the cessation of vomiting takes place. In the intervals, if great thirst exist, and prostration of strength, with very cold skin and clamminess, large draughts of water, as warm as can be swallowed, with one-fifth part of brandy, should be drunk. This will be found to quench thirst sooner than cold water, and will assist materially in producing a warm perspiration. But as the latter is the next important object to be obtained, and should be secured to the patient without any loss of time, reliance must not be placed alone on the hot brandy and water drunk, nor on the 'stimulating alkaline drops' taken along with it; although they are also a powerful sudorific, at the same time that they safely stimulate the system, and neutralise any acid present in the stomach, with a rapidity scarcely to be believed by those who have not witnessed its effects. Other means must therefore be adopted to produce perspiration at all events, and that quickly too; and as in the choice of these we are much limited by the necessity of keeping the patient quiet in the horizontal

position, our endeavours should be directed to the application of heat with a little moisture to the body. For this purpose I recommend a couple of bushels of bran, boiled rapidly in very little water in a copper or large *maçotte* or earthen vessel over a brisk fire, drained through a flannel, and very thickly scattered all over the chest and belly of the patient, sides and all. This is to be retained in its place by bringing the two sides of a blanket, on which I suppose the patient to be lying, over the belly, and fastening them tight in that position. This process will produce, in a very few minutes, the most copious and warm perspiration. The refuse grains of malt or oats, similarly boiled, will answer the same purpose where bran is not at hand. I have no faith in the portable vapour-baths, the steam of water thrown up under the bed-clothes, or the lighting of a spirit-lamp, placed similarly, which have been recommended. I have often and long ago tried all these means in cases of puerperal fever and acute rheumatism; and in one remarkable instance of the latter disease in my own case, but found them totally inadequate to the object in view, and many of them quite inefficient. Let not the public, therefore, be misled on this point. As for sand-bags and bags of salt, as mentioned in the circular of the former Board, they are perfectly inactive, besides being troublesome, because of the great number that is required of them, and the time lost in preparing them. . . . While the warm applications are proceeding, and the internal medicines given, a degree of revulsion should be produced by rapidly promoted counter-irritation on the skin. This will be found to give impetus to the circulation, and thereby to ease the tumult existing in the centre of the body. The counter-irritation should be applied to the thigh and to the upper part—not to the soles, as recommended, of the feet. There are a great many counter-irritants, or agents, which produce irritation on the surface of the body, that have been recommended in this disease (for the principle is generally adopted by all of us); but some are objectionable, and most of them too slow in their operation; and here we have no time to lose. A common blister is too slow; a mustard poultice, besides being slow, is inefficient; tartarised antimony ointment is out of the question. Nitric acid, and even a liniment with vitriolic acid, have been recommended and employed; but these char the skin, and form eschars, which are, so far, a check, rather than an encouragement, to rapid counter-irritation. Some practitioners, fully aware of the great importance of raising a blister on the surface of the body quickly, have actually poured boiling water on the belly in the treatment of cholera; but this is a cruel method, and liable to much consequent mischief. As to camphor and turpentine liniments, we might as well amuse ourselves in blowing cold air at the limbs of the patient. The effect to be produced must be rapid, permanent, available, and general in its influence on the constitution."

The doctor then prescribes his own embrocation;—but we cannot decide where doctors differ, and therefore here make our bow.

Biographical Sketches and authentic Anecdotes of Quadrupeds. By Captain T. Brown. 12mo. pp. 590. Glasgow, 1831, Fullerton and Co.; London, Simpkin and Marshall. We remember a story of an old gentleman who was so addicted to draw the long-bow, and yet so conscious of his failing, that he commissioned a favourite servant to give him a snap

whenever he found him shooting too far over the mark. His worship, it is related, was one day telling of an extraordinary fox he had hunted down in America, the tail or brush of which he assured the company was a hundred yards in length. This was too much for John, and an undeniable nudge was the consequence. His master accordingly qualified a bit—he would not assert that it was quite a hundred yards, but he was sure it was full eighty—another nudge. He came down to fifty—nudge the third. Forty—nudge. Thirty—ditto. Twenty—it would not do. Ten—John was inexorable. At last it was only five—but nudge *encore* was still the order of the day; upon which the angry story-teller leapt up in wrath, and swearing by — it was five, turned upon the cat with the exclamation, "Curse you, sir! won't you allow the fox to have any tail at all?"

Captain Brown's book is very amusing, and there are hundreds of anecdotes, &c. of all kinds of animals, traits of them, accounts of their habits, and, in short, much to inform and entertain the reader; but we must play John, and nudge a little: *ex. gr.*—

"*A domesticated Weasel.*—Although Buffon was of opinion that the weasel was an animal incapable of domestication, we have the following interesting account of one in a letter of Mademoiselle de Laistre. 'If I pour some milk into my hand,' says she, 'it will drink a good deal; but if I do not pay it this compliment, it will scarcely take a drop. When it is satisfied, it generally goes to sleep. My chamber is the place of its residence; and I have found a method of dispelling its strong odours by perfumes. During day, it sleeps inside a quilt, entering by a place that is unsewed in its edge, which it accidentally discovered. At night, I keep it in a wired cage, which it always enters with much reluctance, but leaves with joy. If the servant sets it at liberty before I am up in the morning, after a thousand gambols, it comes into my bed, and reposes in my hand, or on my bosom. If I am up before it is let out, it will fly to me in rapture, and spend half an hour in caressing me, playing with my fingers, and nibbling at them with its teeth like a little dog; leaping on my head and on my neck, and then running round my arm with the softness and elegance of a squirrel. Such is its agility, that it will leap into my hands, although upwards of a yard distant, if I present them to it. It exhibits much adroitness and cunning to obtain any wished-for object; and it is so capricious at times, as to perform certain acts apparently from contradiction. It seems at all times exceedingly desirous of being noticed, watching my eye during all its little pranks, to see if I observe it. If I am inattentive to its sports, it seems to have no pleasure in them, immediately desists, and lays itself down to repose. It is so lively, that the moment I awake it, however sound its sleep may be, it instantly resumes its gambols with as much spirit as before it slept. It never is out of temper, unless when much teased, or when under confinement, which it morally detests; in which case it displays its displeasure by a kind of low murmur, quite opposed to the sound of its voice when pleased. This little creature can distinguish my voice amid twenty others, and springs over every one in the room till it has found me. Nothing can exceed the lively and pleasing way it caresses me with its two little paws; it frequently pats me on the chin, in a manner that expresses the utmost fondness. This, with a thousand other kindnesses, convinces me of the sincerity of its attachment.

He is quite aware of my intention, when dressed to go out, and then it is with much difficulty I can rid myself of him. On these occasions, he will conceal himself behind a cabinet near the door, and spring on me as I pass with astonishing quickness. His vivacity, agility, and voice, with the manner he utters it, have a strong similitude to those faculties in a squirrel. In the summer season, he runs about all night squeaking; but since the cold set in, he has desisted from this practice, but has sometimes expressed this particular sound when rolling on my bed in the sunbeams. It seems extremely probable that the weasel sips the dew, judging from the remarkable manner he drinks milk from my hand. He will never drink water when he can get milk, and then in such a small way, that he appears only to do it to cool his tongue, for he evinced fear on several occasions when water was presented to him. During the summer showers, I caught some rain water, and endeavoured to get him to enter it to bathe himself, but this he would not do. I then dipped a piece of linen cloth in it; this seemed to afford him much pleasure, by rolling himself over it, which he did frequently. The curiosity of this little pet is unbounded, for it is impossible to open a drawer or box without his roving through every part of them: if even a piece of paper or a book is looked at, he will also examine it with attention. Every thing I take into my hand he must run up to, and survey with an attentive scrutiny. I have a young dog and cat, with both of which he is very familiar: he will scamper over their necks, backs, and legs, without their offering him the smallest injury.'

"*A singular Device.*—A singular circumstance, exhibiting in a remarkable degree the reflecting faculties of a wolf, is related as having taken place at Signy-le-Petit, a small town on the borders of Champagne. A farmer one day, looking through the edge of his garden, observed a wolf walking round about his mule, but unable to get at him, on account of the mule's constantly kicking with his hind legs. As the farmer perceived that his beast was so well able to defend itself, he considered it unnecessary to render him any assistance. After the attack and defence had lasted fully a quarter of an hour, the wolf ran off to a neighbouring ditch, where he several times plunged into the water. The farmer imagined he did this to refresh himself after the fatigue he had sustained, and had no doubt that his mule had gained a complete victory; but, in a few minutes, the wolf returned to the charge, and, approaching as near as he could to the head of the mule, shook himself, and spouted a quantity of water into the mule's eyes, which caused him immediately to shut them. That moment the wolf leapt upon him, and killed the poor mule before the farmer could come to his assistance."

"*Singular Interposition.*—A lady had a tame bird, which she was in the habit of letting out of its cage every day. One morning, as it was picking crumbs of bread off the carpet, her cat, who always before shewed great kindness for the bird, seized it on a sudden, and jumped with it in her mouth upon a table. The lady was much alarmed for the safety of her favourite, but, on turning about, instantly discovered the cause. The door had been left open, and a strange cat had just come into the room. After turning it out, her own cat came down from her place of safety, and dropped the bird, without doing it the smallest injury."

"*Old Sparrows are not caught with Straws.*—A cat, belonging to an elderly lady in Bath,

was so attached to her mistress, that she would pass the night in her bedchamber, which was four stories high. Outside of the window was the parapet wall, on which the lady often strewed crumbs for the sparrows that came to partake of them. The lady always sleeping with her window open, the cat would pounce upon the birds, and kill them. One morning, giving a 'longing, lingering look' at the top of the wall, and seeing it free from crumbs, she was at a loss for an expedient to decoy the feathered tribe, when reconnoitring, she discovered a small bunch of wheat suspended in the room, which she sprang at, and succeeded in getting down. She then carried it to the favourite resort of the sparrows, and actually threshed the corn out by beating it on the wall, then hiding herself. After a while, the birds came, and she resumed her favourite sport of killing the dupes of her sagacity."

"*The Sparrow protected.*—M. Hecart, of Valenciennes, procured the kitten of a wild cat, which he so effectually tamed, that she became the friend and protector of a domesticated sparrow. M. Hecart always allowed the sparrow to fly about at perfect liberty. One day, a cat, belonging to a neighbouring house, had seized upon this sparrow, and was making off with it; but this wild cat, observing her at the very moment, flew at puss, and made her quit the bird, which she brought, bleeding and half dead, to her master. She seemed, from her manner, really to sympathise very sincerely with the situation of the poor sparrow, and rejoiced when it recovered from the injury, and was again able to amuse itself with this wild grimalkin."

"*Indicators of Earthquakes.*—The following extraordinary anecdote of the sensibility of cats to approaching danger from earthquakes is well authenticated. In the year 1783, two cats belonging to a merchant of Messina, in Sicily, announced to him the approach of an earthquake. Before the first shock was felt, these two animals seemed anxiously to work their way through the door of a room in which they were. Their master, observing their fruitless efforts, opened the door for them. At a second and third door, which they likewise found shut, they repeated their efforts, and, on being set completely at liberty, they ran straight through the street, and out of the gate of the town. The merchant, whose curiosity was excited by this strange conduct of the cats, followed them into the fields, where he again saw them scratching and burrowing in the earth. Soon after, there was a violent shock of an earthquake, and many of the houses of the city fell down, of which number the merchant's was one; so that he was indebted for his life to the singular foresight of his cats."

"*Instinct of a Sheep.*—The following anecdote is really worthy of being told by the Ettrick Shepherd, or the Poet of the Lakes, and we therefore regret that the incident did not happen in the vicinity of 'still St. Mary's Loch,' or on the pastoral braes of Westmoreland. A gentleman of Inverness, on a recent journey in the Highlands, while passing through a lonely and unfrequented district, observed a sheep hurrying towards the road before him, as if to interrupt his progress, and at the same time bleating most piteously. On approaching nearer, the animal redoubled its cries, and, looking significantly in the face of the traveller, seemed to implore some favour or assistance at his hands. Touched with a sight so unusual, the gentleman alighted, and leaving his gig, followed the sheep to a field in the direction whence it came. There, in a solitary cairn, at

a considerable distance from the road, the sheep halted, and the traveller found a lamb completely wedged in betwixt two large stones of the cairn, and struggling feebly, with its legs uppermost. The gentleman instantly extricated the little innocent sufferer, and placed it safely on the neighbouring greensward, while its overjoyed mother poured forth her thanks in a long-continued and grateful, if not a musical, strain."

These are staggering facts. Some pretty plates adorn the volume in which they are recorded.

Cavendish. Colburn and Bentley.

[Second notice.]

IN our first notice of this work, which is making a good deal of stir in certain of the upper and professional circles, we expressed our disapprobation rather sharply upon its demerits; for we thought its statements derogatory to the character we wish to entertain of the naval service; we disliked frequent oaths, however characteristic; and we would never advise any man to print (what no man ought to tell) accounts of his amours and intrigues. But in performing this duty, we did not mean to be unjust to the talent of the author, which, under proper restraints, is far from inconsiderable. He has also evidently mixed with the higher ranks in society; and his book has some striking political matter to attract public attention. Indeed, we are inclined to surmise (however improbable the supposition) that the out-of-the-way form of a novel has been in this instance adopted to forward a particular political purpose. To support this opinion we quote a note, and another extract from the third volume, which we should rather have expected to meet in a pamphlet or parliamentary report.

"I owe it to myself to say, that it was originally intended to introduce, as an appendix, numerous government documents passing between the admiral, the ministers, and the English ambassador, which warranted this assertion, and one still more extensive, namely, that no government in any country could have more grossly violated every feeling and principle of public honour and justice, than did the late one of the Duke of Wellington towards the officers and men of Navarin. Three weeks, however, before the appearance of this novel, circumstances occurred to render the suppression of these pages indispensable."

"Happening one morning at breakfast to inquire of my father where he had dined on the preceding evening, he replied, 'At Prince L—d's.' 'Did you hear any thing new?' 'Yes; by the merest accident I did; not only was it new, but, I think, rather monstrous; tell sadly against my party, if it were known. I hardly think it safe to communicate the circumstance to you, you're such a confounded hot young Whig. You really should, Manvers, take your father's politics.' 'Oh, doubtless, sir! perhaps you'd wish me to wear your old clothes; but let me have this murder out.' 'Well, then, be discreet in mentioning it. At the dinner-table I happened to get next my old friend, Count —, and, in the course of the evening, we chanced to be talking, in one of the window-recesses, in German, when the Duke of W—n and Sir Edward Codrington passed near us in earnest conversation. Of course I did not move, and was taken for a second foreigner, who did not understand English. 'Sir Edward Codrington,' said the duke, 'I am happy to inform you that I am making arrangements to give you a pension of

eight hundred a-year for your services.' 'Indeed, your grace! then I cannot accept it.' 'Oh, but indeed you must! it comes from the king, and is the most handsome thing possible.' 'I cannot see how the king, my lord duke, can reward my services, after what has passed, in this manner. I hope there is not a more loyal subject in his majesty's dominions than myself; but I must, in this instance, consult my own feelings. You will recollect, you have as yet given me no answer to the memorial which I sent in, requesting that the men might be remunerated for the clothes which they lost by the shot in the battle of Navarin; neither have you taken any steps towards giving us a grant for the action; and can your grace imagine that I will receive a pension, when my men are thus allowed to go unrewarded, and the action has been so much misrepresented? Your grace has commanded an army, and I have commanded a fleet—a combined fleet—and your grace is very well aware, how much the men look up to a commander-in-chief for protection and the remembrance of their claims. No; if his majesty wished to reward me for the action, let my officers and men, who shared in my danger, share my reward.' 'You mistake, Sir Edward,' replied the duke, 'the merit of the battle has never been denied; besides, the treaty at Alexandria is sufficient to establish your reputation. But, with regard to a parliamentary grant, the law is against you.' 'Yes, your grace, I know it is, if you choose to make it so; but we have as much right to it as Lord Exmouth: the circumstances are the same.' 'No; in that case war was declared.' 'I know it; Lord Exmouth was instructed, if he could not obtain what he demanded, he was to declare war by firing on Algiers. He did so; but, in my case, the Turks first fired upon us, thus virtually declaring war; and because we were the defendants, instead of assailants, we are to lose our grant!' 'Will you not accept the pension then?' inquired the duke, rather chagrined. 'Most decidedly not, my lord duke,'—when they bowed and separated. 'Good heavens! my dear sir, do you actually mean to say that the whole of this took place? I can hardly believe such a thing.' 'That may be very likely; I will not swear to every syllable, nor perhaps to every phrase; but of this I am most positive, I have given you nothing more than the sense of their conversation, and nearly all the wording of it.' 'Well, it indeed seems monstrous that a ministry could be found silly enough to attempt patching up their v— by such a paltry bribe; and if any thing were wanting to prove Sir Edward Codrington's nobleness of soul, and the opposite quality in the other, it is this transaction.'

Family Classical Library, No. XXIV.

Plutarch, Vol. 2. Valpy.

THE continuation of Plutarch's Lives, with eight heads, engraved from gems, in a slight, common style.

Divines of the Church of England, No. XIX.

Hall's Contemplations, Vol. 2.

TEN books of Bishop Hall's admirable and characteristic Contemplations are the contents of this sequel—a volume worthy of the work of which it is part.

The Jew. 3 vols. 12mo. London, 1832. Bull. WE do not think very much judgment has been employed by the translator of this work. A novel like the present required much softening down, and great curtailment, to give it a

chance of English popularity. It is a work of talent; and the character of Esther, though strongly resembling Rebecca, has many excellent qualities; but the characters are crowded, even to forgetfulness; and the thread of the narrative becomes confused by its many and improbable incidents—to say nothing of its exaggerated horrors.

The History of the Great Plague in London, in the year 1665, &c. A new edition, with a Preface, &c. 12mo. pp. 311. London, 1831. Renshaw and Rush.

WE trust we may not say with reference to this publication, that "coming events cast their shadows before;" though it has a very ominous look at this agitated period. De Foe's description of the awful calamity which scourged the English capital, is probably somewhat exaggerated by his vivid imagination; but a more powerful and appalling work certainly never issued from the press. There are also many things stated in his account, of which a useful application may be made, should we be unhappily visited by any similar affliction.

The Chameleon. 8vo. pp. 312. London, 1831. Longman and Co.; Edinburgh, Oliver and Boyd; Glasgow, Atkinson and Co.

A VERY pleasant miscellany—tales, essays, poems, with a pretty and romantic German landscape as a frontispiece, which is afterwards illustrated by a legend of the "brave Roland." We select one or two specimens.

"The Hours.

Nay, Pallet, paint not thus the Hours—
Young urchins, weaving wreaths of flowers;
Hiding in the buds of roses,
Where the folding pink-leaf closes;
Peeping from the sunflower's stem,
Or a beauty's garment hem!
No!—rather, flimmer, make them lurk—
Busy at their blanching work,
Withering wrinkles in the cheek,
Every hour before more sleek—
In the dimple, 'twixt the lid
Of the eye; or show them shid
Sly among the auburn tress,
Like a falcon bound with jesses!
Turning them to silvery gray,
Scattering snow-tints in their play!
Oh! the Hours are crabbed creatures,
Still at war with beauty's features!"

From a clever series of papers called "the Focus," we take an ingenious defence of dulness.

"Utility of Dulness.—Dull, timid, and weak men are, as it were, the cement of society;—the mortar which serves to connect and bind together the more valuable parts of the great fabric. They are, like their supposed prototype, an indispensable part of a superstructure; a sort of trifling negative series of particles, which, however worthless in themselves, cannot be done without. They are the seasoning of society—somewhat liberally sprinkled, to be sure. They give a goât and flavour to the social circle, which even attic salt cannot impart. Paradoxical as it may appear, they are the finest possible breaks in the continuity of mere liveliness, and converse would actually become tame without them. A dull uniformity would prevail; and we all know, by experience, that nothing palls so much as unvaried sprightliness, unshaded mirth, and unrelieved brilliancy. Deathlike dulness itself is not so tiresome and fatiguing. When a boy, I have often made fireworks:—once, in compounding a set of squibs, I forgot to mix up with the positives of saltpetre and gunpowder the negative of pounded charcoal; and in firing them off, each consisted of but one explosion, bright no doubt, but transient also, and dangerous withal; while the squibs which were rightly mixed up were both bright, sparkling too, and

much more lasting;—besides, they did not scorch me. Dull men are, then, to society what charcoal is to squibs."

We believe Mr. Atkinson, the publisher, is also the author of this volume, which does him much credit.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

Few reports were read on Wednesday evening, though we understood others were in a state of forwardness.

A report on a pille-driver was read and recommended. Reports on a method of preventing the collision of steam-vessels, &c., and on a comb and curling-irons of a particular construction, were also read, neither of which were recommended as deserving the attention of the institution. Almost all public bodies have to contend with the hydra *prejudice*!—perhaps none more than this. The last-mentioned articles, "the comb and curling-irons," from the description given of them by the secretary, really seemed ingenious, and likely to be useful; but we suppose the members considered the subject too trifling for publication.

Several presents were laid on the table, and many communications which had been received were announced, and referred to the respective committees.

GEOLOGICAL SOCIETY.

Nov. 30.—R. I. Murchison, Esq. in the chair. —After the election of Fellows, the reading of a paper, by Capt. Edward Cook, R.N. on the geology of the southern provinces of Spain, was begun. A letter was also read from Leonard Horner, Esq. containing translations from the accounts published by Hoffmann in the *Preussische Staats Zeitung*, of the new volcanic island in the Mediterranean, and on its connexion with the neighbouring extinct volcanic island of Pantellarea, and the hot springs and vapour-baths of Sciacca, on the coast of Sicily. This communication was illustrated by specimens of the former island, sent home by Admiral Sir Henry Hotham, and presented to the Society by John Barrow, Esq. and by another similar series also presented to the Society by Dr. Daubeny, of Oxford. Contributions to the museum and library were announced from various scientific societies and private individuals.

ROYAL GEOGRAPHICAL SOCIETY.

Nov. 28th.—G. B. Greenough, Esq. in the chair. Three papers were read, viz. 1. Extracts from a MS. volume of researches in Egypt, transmitted to the Society by their author, J. G. Wilkinson, Esq. of Alexandria. 2. A letter from the same gentleman, suggesting a new projection for terrestrial maps, which he had found convenient in his journeys; and 3. A letter from a gentleman lately returned from Java, giving an account of a remarkable valley, called the Guevo Upas, or Poison Valley, which was communicated by Mr. Barrow, and illustrated by extracts from a letter written by W. R. Hamilton, Esq., V.P. of the Society, who, when British minister at the Court of Naples, visited the Lago di Amsancto (*Amsancti valles* of Virgil, *Æneid*, lib. vii. l. 565, into which the fury Alecto threw herself, after having, at the command of Juno, sown the seeds of discord among the Italian cities), the phenomena of which closely resembled those of the valley in Java.

"On approaching within a few yards of the latter," says the narrative, "we experienced a

strong nauseous, sickening, and suffocating smell; but on coming close to the edge this left us, and we were lost in astonishment at the scene before us. The valley appeared half a mile in circumference, oval, the depth from thirty to thirty-five feet, the bottom quite flat, without vegetation, and the whole covered with the skeletons of human beings, tigers, pigs, deer, peacocks, &c. interspersed with large stones, without any appearance of vapour, or opening in the ground, which appeared to be of a hard, stony substance. The sides of the valley, from the top to the bottom, were covered with trees and shrubs. Having lighted our cigars, we prepared to descend; and, with the assistance of bamboos, went down within eighteen feet of the bottom. We then fastened a dog to a bamboo, and sent him in, having our watches in our hands; and in fourteen seconds he fell on his back, nor ever moved his limbs, or turned to look round, though he continued to breathe for eighteen minutes. We then sent in another, or rather he got loose from the bamboo, and walked in to where the other dog lay; and in ten seconds he fell on his face, and only continued to breathe for seven minutes. A fowl was then tried, which died in a minute and a half; and another seemed to expire before even touching the ground. On the opposite side of the valley was lying a human skeleton, which I was most anxious to get, but the attempt would have been madness. The bones, from exposure to the air, were bleached as white as ivory. The human skeletons are supposed to have been rebels, who, pursued from the main road, may have sought shelter here, ignorant of the fatal properties of the place. The contiguous range of mountains is volcanic, and two craters are at no great distance; but in the valley itself there is no smell of sulphur, nor any appearance of eruption having ever taken place.

"The Lago di Amsancto," says Mr. Hamilton, "is of a rhomboidal form, about twenty paces in its shortest, and thirty in its longest dimension. The water is of a deep ash colour, almost black, and bubbles up over a large proportion of the surface, with an explosion resembling distant thunder, and to the height of two feet, more or less. On one side of the lake there is also a constant and rapid stream, of the same blackish water, running into it from under the barren rocky hill; but the fall is not more than a foot or two; and a little above are some holes, through which warm blasts of sulphuretted hydrogen gas are continually issuing, with more or less noise, according to the sizes of the openings. Some are oblong, others perfectly round. On the opposite side of the lake is another smaller pool of water, on the surface of which are continually floating, in rapid undulations, thick masses of carbonic acid gas, which are visible a hundred yards off. This pool is called the Coccoalo, or cauldron; the larger lake is called Mefite; and the openings on the slope above Mefitelle. These openings you will recognise as the *savi spiracula Diis*, and the cauldron as the *specus horrendum* of Virgil.

"The mephitic vapours arising from these waters are at times very fatal, particularly when the wind is strong, and they are borne in a body in one direction. When calm, as when we were there, the danger is much less, as the carbonic acid gas will not, in its natural state, rise above a couple of feet from the ground; and we were thus enabled to walk all round the lake and cauldron, and even step across some parts, taking great care,

however, not to stumble so as to fall; as a very short time, with our noses and mouths too near the ground, would have fixed us to the spot *asphyriis*. Many insects lay dead around us; and birds are said often to fall in like manner into the lake and on the banks.

"The gaseous products of these waters are, 1. Carbonic acid gas; 2. Sulphuretted hydrogen gas; 3. Sulphurous acid gas; and 4. Carburetted hydrogen gas. When evaporated, their deposit has been found to cure the *scab*, or *rot*, among the neighbouring sheep; and an attempt has been made to establish a sulphur manufactory here, as on Solpaterra, but without success. The banks have thus been much changed since the days of Virgil; but the great features still remain substantially the same, though, on again reading his description, I do not think it that of a person who had visited the spot. It is curious enough, that although the earth is here much blackened, there is no appearance of volcanic soil in the adjoining country."

The thanks of the Society were voted to the respective contributors of the above papers, and the meeting adjourned.

NEW BOILING APPARATUS.

MR. PERKINS, the celebrated engineer, has recently discovered and obtained a patent for a new mode of boiling, by a process so simple, that it is a subject of surprise to all who see it, that it has not been earlier among our useful improvements.

It consists in placing within a boiler, of the form common to the purpose to which it is applied, and of all capacities, from coffee-pots to steam-boilers, a vessel so placed, that it may, by slight stays, be kept at equal distances from the sides and the bottom of the boiler, and having its rim below the level of the liquid: the inner vessel has a hole in the bottom about one-third of its diameter. On the application of the fire to the boiler, the heated liquor rises in the space between the two vessels, and its place is supplied by the descent of the column in the inner vessel, or, as Mr. Perkins calls this part of the apparatus, the *circulator*; for the ascending portion having the space it occupied supplied by the descending liquid in the centre, and the level of the centre being kept up by the running in of the heated portion which has risen on the sides—a circulation rapidly begins and continues; thus bringing into contact with the heated bottom and sides of the boiler the coldest portion of the liquid. By this process the rapidity of evaporation is excessive, far exceeding that of any method previously known; whilst the bottom of the boiler, having its acquired heat constantly carried off by the circulating liquid, never burns out, nor rises in temperature many degrees above the heat of the liquid. In many manufactures this is a most important discovery, especially in salt-works, brewers' boilers, and for steam-boilers; and, applied to our culinary vessels, no careless cook can burn what she has to dress in a boiler by neglecting to stir it, as the circulation prevents the bottom of the boiler from ever acquiring heat enough to do mischief. We need hardly add, that this discovery is esteemed by men of science to be one of the most useful and important of the present day.

CELESTIAL PHENOMENA FOR DECEMBER.

FREQUENTLY, in this month, the solar orb is either totally obscured during its brief continuance above the horizon, or its beams, struggling through an atmosphere loaded with vapours,

feebly illumine the regions of the northern world. This dreary aspect of the heavens is occasionally varied, when the air being refined by the frost, the Sun shines with unclouded brilliancy, and his rays, clear, but cold, are reflected from the snow-clad landscape, and sparkle forth from ten thousand glittering gems.

22^d 1^h 6^m—the winter solstice: the Sun enters Capricornus, and attains his greatest southern declination, 23° 27' 35".

31^d 14^h—the Earth in perihelion: the Sun's apparent diameter at its maximum, 32' 35"⁶, and its apparent daily motion 1° 1' 10".

Lunar Phases and Conjunctions.

● New Moon in Scorpio	D. H. M.
○ First Quarter in Aquarius	3 19 48
○ Full Moon in Orion	11 23 22
○ Last Quarter in Virgo	18 17 10
○ Last Quarter in Virgo	25 12 10

The Moon will be in conjunction with

	D. H. M.
Mercury in Ophiuchus	4 22 30
Uranus in Capricornus	8 22 0
Jupiter in Capricornus	9 10 40
Aldebaran	17 occultation.
Regulus	22 occultation.
Saturn in Leo	24 2 30
Venus in Libra	29 7 50
Mars in Scorpio	30 15 40

Lunar Occultations.—This month will be remarkable for occultations of two of the brightest stars in the northern hemisphere, Aldebaran and Regulus.

17^d—Aldebaran will be occulted by the Moon:

	D. H. M.
Immersion	11 8 38
Emergence	11 43 38

The following diagram will illustrate the phase and position of the Moon, and the points of immersion and emersion:

22^d—Regulus, the bright star in Leo, will be occulted:

	D. H. M.
Immersion	19 40 32
Emergence	20 41 23

The phase and position of the Moon, and points of immersion and emersion, will be as in the following diagram:

The singular phenomenon of the projection of a star on the disc of the Moon has been observed with Regulus, though not so frequently as with Aldebaran: three or four instances only are recorded as occurring with the former star; with the latter, this anomalous appearance has been very frequent.

25^d—Mercury at his greatest elongation (19° 48') as an evening star.

11^d 2^h—Venus in conjunction with α Virginis: difference of latitude 20'. 18^d—greatest elongation (46° 55') as a morning star.

7^d—Mars in conjunction with 23 Librae:

difference of latitude 30". 13^d—with 41 Librae: difference of latitude 30". 18^d—with λ Librae: difference of latitude 3". 23^d—with 1 α Scorpii: difference of latitude 7'; and with 2 α Scorpii: difference of latitude 3'.

The Asteroids.

7^d 2^h 45^m—Saturn in quadrature. 24^d—stationary near α Leonis.

5^d 20^h—Uranus in conjunction with β Capricorni: difference of latitude 6'.

Telescopic Objects.—The following telescopic objects will be in favourable positions for observation during the month:

Gemini.—Castor, the brightest star in this zodiacal constellation, is a double star. Both of the stars of which it is composed are of a white colour, and nearly equal in magnitude: they revolve about their common centre of gravity in orbits that are nearly circular, and at right angles to the line of vision. Period of revolution, 342 years and 2 months, in a retrograde direction.

Pollux, the other bright star in Gemini, is a multiple star, and varies in its lustre; fifty years since, it was brighter than Castor: it probably varies between the first and third magnitudes. χ is a very beautiful double star. In the lyre of Castor is a double star, the large star of which is white, and the small a ruddy purple. σ is a double star; large star yellow, small bluish. δ and ζ are also double stars. North-west of η in Castor is a mass of small stars. Near this spot in the heavens the planet Uranus was discovered, 13th March 1781.

Cancer.— α is a double star. 2α is an extremely delicate double star; the large star white, the small red. ϵ is formed of six stars: 3α , ι , θ , and ϕ , are double; ζ is a triple star, two of which are of a pale red colour: it requires very favourable circumstances to be seen distinctly. Three stars (26, 73, and 74) have been missed from this constellation. Between γ and δ is a mass of small stars. Below the southern claw of Cancer is a cluster in which 200 small stars have been counted. The nebula in Cancer, and that in Coma Berenices, are supposed to be the nearest clusters to the Via Lactea, the nebula to which our Sun belongs.

Occultation of Saturn.—Nov. 26 (see *Lit. Gaz.* No. 771). The limb of the Moon was undulating at immersion. Apparent contact of the western ansæ with the enlightened disc of the Moon 16^h 32^m 29^s; disappearance of the eastern ansæ 16^h 33^m 5^s; emersion 17^h 41^m 52^s. A mist partially obscured the Moon at emersion, so as to render the re-appearance of the ring of Saturn indistinct: the extremities of the ansæ were very dim.

Dep'tford.

J. T. BARKER.

LITERARY AND LEARNED. ROYAL SOCIETY.

ON Wednesday the annual meeting was held: his Royal Highness the Duke of Sussex in the chair.—A list was read, which contained the names of a number of distinguished individuals, fellows of the Society, who had died during the past session; amongst these were Captain Henry Foster, late commander of the Chanticleer; Mr. Abernethy; the Rev. Fearon Fallows; Dr. Magee, Archbishop of Dublin; Mr. Thomas Hope; and the famous physiologist, Scemmering, of Göttingen.—His Royal Highness next read his address. It was a well-expressed epitome of the leading events which had taken place in the Society since the royal duke's election as president. In the language of respect it referred to the distinguished scientific men who, since the days of Newton, had filled the same most honourable office. His (the duke's) early education, his occupation, and his rank in life, had somewhat prepared him for the important duties which were expected to be performed by the President of the Royal Society, who was the official representative of the institution at the British Museum, the Royal Observatory at Greenwich, and, in short, the medium of communication between the Society and other public bodies, as well as the government. He looked for the prompt assistance of the fellows, and disclaimed all other feelings than those which had for their end the advancement of science, and the common honour of the country. Of the accomplished philosopher* to whom he had the honour of being opposed at the last election, he felt it was impossible to speak otherwise than in terms of admiration, respect, and good will, which future acquaintance would ripen into sincere friendship. In speaking of the deceased fellows, whose names had been enumerated, the royal duke characterised Mr. Abernethy as a man of a bold spirit for philosophical investigation,—rough, probably, in manner, but possessing, in a superlative degree, the finer feelings of the heart, which were frequently developed where the curse of poverty was superadded to that of disease. The Rev. Fearon Fallows was another name to be remembered with respect and regret. Appointed by the government to that situation of astronomer at the Royal Observatory, Cape of Good Hope, Mr. Fallows took with him to that settlement a variety of exquisitely constructed instruments, the proper management of which, and their application to useful purposes, being only understood by himself, so devoted was he to the cause of science, that, even when labouring under an incurable dropsy, he was carried in blankets by his servants, to the observatory, in order that he might wind up his chronometer, adjust his apparatus, and take the necessary observations. Mr. Thomas Hope, author of the well-known work on the Atonement, was names not likely to be forgotten in literature.

His Royal Highness delivered the address in a very emphatic manner, and stated that his friend Dr. Roget had prepared another, which would also be communicated to the meeting. The Doctor's address treated chiefly of the alterations which had been made in the Society's statutes. The sum of £1000 raised by the sale of duplicate books in the British Museum, had been received from the trustees of that establishment in part payment.

* Sir John Herschel.

of the Arundel MSS., and future payment was expected in the spring, at which period a second sale of the British Museum's duplicates was to take place. The money already received by the Royal Society, as above stated, had been nearly all expended in the purchase of books on science; and the additional room required for the proper keeping of these had led to a successful negotiation, through the royal president, for the adjoining chambers, lately belonging to the Privy Seal office. The president then delivered the Copley medal to the Rev. George Peacock, who had been commissioned to receive it for Professor Airy, of Cambridge, to whom it was awarded for his various papers on achromatic eye-pieces, and on optics generally. The royal medal was not awarded, in consequence of the arrangements regarding its foundation not being yet permanently made.

The addresses and report were unanimously ordered to be printed. His Royal Highness and the other officers of the Society were re-elected. From the unanimity of the elections we think it may confidently be hoped that the divisions which have existed in this ancient Society, to the deterioration of science, are now healed.

In the evening the Fellows dined together at the Crown and Anchor, in the Strand, and many good speeches were delivered on the occasion. The President was in the chair.

SOCIETY OF ANTIQUARIES.

Nov. 24th. Mr. Hallam in the chair. The first paper read was by Mr. Palgrave, on Cædmon, the Anglo-Saxon versifier of the Holy Scriptures. It was remarked, that his name is dissimilar to any in use among the Anglo-Saxons, but closely resembles the word with which the first chapter of Genesis commences in the Chaldean version. It is therefore presumed that this name may have been given to the poet in allusion to his great work; or else that, as the same word was applied to whatever came from the East, it might commemorate the fact, that Cædmon had visited that part of the world. A portion was also read of an interesting memoir on Fisher, bishop of Rochester, and his conduct regarding Elizabeth Barton, the prophesying maid of Kent; by John Bruce, Esq. Mr. Carlile presented a drawing of a Roman altar, found within these few days; but where we did not learn. Several fellows were elected.

Dec. 1st.—Mr. Buckler exhibited a drawing of an ancient salver, belonging to the parish of Bermondsey, which he supposed to have been originally the property of the Abbey of Bermondsey. The secretary read a further portion of Mr. Bruce's paper on the history of Fisher, bishop of Rochester, who fell a victim to his obstinate adherence to the pope's supremacy, in the reign of Henry VIII. It gave an affecting account of the arbitrary persecution and hardships which the unfortunate prelate suffered. In a letter addressed to Cromwell, during his confinement in the Tower, he says, "I have neither shirt nor sute, nor yett other clothes, that ar necessary for me to wear, but that bee ragged and rent to shamefully. Notwithstanding, I myght easily suffer that, if thei wold keep my body warm." "And, as our Lord knoweth, I have no thyng left un to me for to providee any better, but as my brother of his own purs layeth out for me, to his great hynderance." Yet, such was the barbarous mode of treating prisoners in those days, that Fisher does not appear to have been worse provided for than Sir Thomas More, and others who were confined in the Tower at the same time.

The unhappy prelate was so enfeebled by age and hardships, (being nearly eighty,) that he could scarcely walk to the place of his execution; and a chair was carried by him, on which he rested several times.

FINE ARTS.

NEW PUBLICATIONS.

Scenery of the Rivers of Norfolk; comprising the Yare, the Waveney, and the Bure: from Pictures painted by James Stark; with Historical and Geological Descriptions by J. W. Robberds, Jun. Esq. Part III. Moon, Boys, and Graves; Jennings and Chaplin; and the Artist.

THE plates in the present, as in the former parts of this interesting publication, combine in subject, composition, and detail, the united excellencies of Hobbins, Ruysdael, and Vanderelde, and exhibit the talents of Mr. Stark, and of the able engravers employed, to the greatest possible advantage. We cannot look upon the scenes here represented, bearing as they do every internal mark of fidelity, without experiencing a pleasure similar to that which would attend the contemplation of the reality. Their execution may vie with that of the best performances in the same class of art which this or any other country has produced; and the greatest praise is due to Mr. Stark for the perseverance, as well as taste, which he has displayed in his own individual exertions, and to Messrs. W. R. Smith, G. Cooke, R. Brandard, W. Forrest, J. F. Lambert, J. H. Kerneot, and C. Fox, for the manner in which those exertions have been seconded. The historical and geological descriptions, by Mr. Robberds, are perspicuous and unaffected. The work is dedicated, by permission, to his most gracious Majesty William the Fourth. We feel ourselves bound to say that the royal patronage was never more worthily bestowed; and we sincerely hope it will be followed by the general encouragement to which merit is justly entitled.

Visits of William IV., when Duke of Clarence, as Lord High Admiral, to Portsmouth, in the Year 1827. By Henry Moses. Aroh, &c.

IN noticing the concluding number of a publication of which we have repeatedly spoken with praise, we are bound in justice to observe, that we think Mr. Moses has an undoubted right to entertain the expectation with the expression of which he closes his introductory address:—"It has been the desire of the engraver of the following views to leave a lasting memorial of the principal occurrences during a visit so interesting to those who were locally connected with the place, and so important to the naval service of the empire. Her present Majesty was the companion of her royal consort during the latter part of this memorable visit; and now that the characters of the King and Queen have been more fully developed, and most enthusiastically appreciated by all classes of their Majesties' subjects, the editor trusts that in laying his present labours before the public at large, he will perform a service that will not be unacceptable to every loyal and patriotic mind in the British empire."

CHOLERA MORBUS.

(We are again favoured with a valuable communication from Sunderland, to the particulars of which—clear, direct, and elucidatory as they are of this awful visitation—we earnestly claim the public attention.)

Sunderland, Nov. 30.

MY DEAR SIR,—I was prepared, from the discordancy of opinion which exists among

medical men as to the contagious or infectious nature of the pestilential cholera, to meet with considerable difficulty in tracing the progress of the disease, and in ascertaining its communicable characters. You will be somewhat surprised, then, to hear, that, while the predisposing causes (at least in their whole extent), and the nature of their communication, remain still to be explained, no doubt remains in my mind as to its really infectious characters. The anticontagionists of this town dwell upon the negative arguments, that some cases originate sporadically, that is to say, without any apparent connexion with diseased persons. I have only seen one case of this kind,—a girl at Monkwearmouth,—who died in a street where several had also perished a short time before. If a whole family is affected in succession, they further state that they are all exposed to the same influence: if this influence is external, how is it possible that it should confine itself to one house? it must be an influence which makes mankind alone the chief means of its dissemination. And, lastly, they argue from the exemption of some who are placed under similar circumstances with others who are afflicted by the malady. If all were attacked, there would indeed be little difficulty in establishing the progress and communicability of the disease; and need I point out how fatal it would be? In opposition to these opinions, I have had facts before me of the most evident communication of the disease from one branch of a family to another. The communicability becomes greater immediately after death. (It will require further facts to prove this; but it has occurred in many instances, when the disease could not have been latent, as the person had no previous communication with the deceased.) I have known persons to sleep one night with a patient, and not catch the disease; they have gone out to sea, and been exposed to cold and fatigue, and the next night, placed under similar circumstances, they have been taken ill, even in the short space of two hours; and I have seen a dozen people around an invalid, and the relation that was paralysed by grief has been the only one who has continued the pestilence in the house. It has now been admitted, that the "tabular view" of Dr. Daun was a kind of trap for the medical men of the town. I think no such measures, which, by mystifying, increased alarm, need have been resorted to, had a little more firmness and energy been shewn on the arrival of the commission. I am certain that none of the respectable practitioners of this town will willingly omit to report a single case. If there are those who conceal the truth, they should be punished with the utmost penalty of the law. I think there is but one opinion, that any quarantine measures upon a large scale would, in this country, be equally useless and impracticable. Had the commercial people of Sunderland been informed that this was the opinion entertained by the highest medical authorities, they probably would never have influenced any of their resident practitioners to conceal facts, or subvert the truth; for even false reports, they must have

* Dr. Daun assisted a dying patient, and was the same night seized with spasms and other symptoms of cholera. I assisted a female at the moment of death, at half-past eleven last night, and at two o'clock in the morning was seized with vomiting, other symptoms, and cramp in the legs, and a general sensation as if a mineral poison had been administered to me. It has prevented my going out to-day, though I have never felt any inconvenience from the closest approximation to the living.

been aware, could never have removed the restrictions attendant upon foreign communication. The pestilence, as it exists here, does not increase in proportion to the number of cases, but in a direct ratio to the number of points over which those cases are spread,—three deaths in one house may only communicate the disease to one person, but the chances will be in favour of those three cases, occurring in three different houses, affecting an equal number of people. The disease forms little *nuclei*—it ravages a court, then enters a wide street; it travels up an alley, and then communicates with another; while, in the midst of this simple and easy to be traced progress, a few solitary cases arise, where predisposition alone appears to be the originating cause. The predispositions which have hitherto come under my notice have been mental and bodily fatigue, previous disease, especially diarrhoea, poverty, and dirt, and drunkenness; but I have seen cases where strong and healthy people, employed in rubbing or taking care of patients, have also been afflicted. The indication here would be, removal as soon as possible to the hospital, or separating, in whatever manner, and as far as practicable, the healthy from the diseased. The total number affected since the 26th of October to Wednesday, Nov. 30th, is 319, of which 97 have died, and 156 recovered, leaving a balance of 66; from which, however, we must subtract 25 cases acknowledged as simple diarrhoea, leaving 41 cases. Considering the population of Sunderland at 40,000, this would leave a mortality of a little more than two to the thousand; but the fact is, that almost all these cases have occurred in the parish of Sunderland, whose population cannot be averaged at above 17,000. In 1000 inhabitants, 53½ died at Limburg, 35 at Mitaw, 31 at Riga, 17 at Posen, 13 at Petersburg, 12 at Königsberg, 10 at Elbing, 9 at Dantz, 5½ at Stettin, 4½ at Berlin.

I cannot send you much information on the character of the disease. It presents itself here in a type much modified from what has been described to us of its appearance in Asia and on the continent. There have been few of the very violent and immediately fatal cases; and when they occur, it is difficult to see them: the patient is generally seized between the hours of one and three in the morning, and life is extinct before any assistance can be given. In other cases, it runs through the symptoms of a congestive fever, which terminates in an almost always fatal collapse, of a typhoid or malignant type. The treatment, hitherto, has been very varied, but attended with very indecisive results. One of the most marked cases of recovery was a pilot, under Mr. Torbeck's care,—he was bled, had oxygen administered and large doses of ammonia. We were called to him at two o'clock in the morning of the 28th; and yesterday, the 29th, he was recovering without the consecutive fever.

The fact of the occurrence of cases of cholera at Newcastle is, I suppose, now officially announced. I received on Monday morning a letter from that town, announcing the dissection of a man who, I believe, attended a funeral in this town. Another case of a servant girl was also stated to have been fatal on Sunday. The chance of study which the slow progress of the disease affords, though much diminished by the impossibility of obtaining *post mortem* examinations (orders from council have come down for the burial of the dead twelve hours after death), furnish grounds for considerable hope, that observation and experience will yet enable us to combat more success-

fully against this new and most malignant disease. I remain, &c.

W. AINSWORTH.

SKETCHES OF SOCIETY.

THE SIN OF PUNNING.

MR. EDITOR,—It was with some degree of pleasure that I read in your last week's number a letter against punning; though, according to my views, the subject was not treated with the gravity it deserved. It may, indeed, be said, a man who would make a pun would pick a pocket. To persuade a punster of the truth of this remark would doubtless be a fruitless effort; as his mind, ere he became a punster, must have been reduced to too infirm a state for the perception of truth. However, to those who may have considered punning merely as an innocuous waste of time, and who do not feel that horror of the practice it deserves, I beg to offer a few observations, which I trust will save them from so debasing a practice.

What is punning? Merely distorting words, in order to make fools laugh at the expense of truth. What an aim!—but such is the aim of a punster, though the effect is more deadly than his mind can perceive. To any man who has thought at all, it must be apparent that he thinks through the medium of words; and even by a punster it must be admitted, that almost all the ideas he obtains are through the same medium: further, that in the most studied compositions, where the great aim of the writer is to convey ideas definitely, such is the natural infirmity of language that it is found almost impossible to do so. Yet the punster wishes to cause such confusion in the symbols that represent ideas, that nobody shall be able to consider any one as the representative of a positive or separate idea. Well may it be said, then, that a man who would make a pun would pick a pocket—in fact, what paltry crime, what reckless cruelty, would a creature not be guilty of, who feels a pleasure in creating confusion in the intellect of man, and in reducing him to a lower grade than brutes, who, so far as they do convey their ideas to each other, do it so as to be understood?

This ignoble habit is not only horrible in its consequences, but demonstrates on the part of those who fall into it, that their minds are incapable of seeing that they are not doing what they suppose they are about; for where is the punster who does not consider himself witty? Yet, how can any one but a man with the mind of a punster conceive there is any thing like wit in making a person suppose you mean one thing when you mean another, or in selecting two sounds representing two ideas and blending them in one, so as to destroy—what? Why, one human idea! A hound would be hanged for giving a false cry; yet a punster thinks himself permitted falsely to convey mental notions, and glories in his shame. Poor wretch, when he triumphs, what a triumph is his!—he has succeeded in mystifying words! But were those words even represented by corresponding words in any other language, his paltry power even over words would cease. Such is the triumph of the punster—such, as has been represented, the baneful tendency of his horrible aim! Who then would be a punster? who would call a punster friend? who is there that must not loathe a being that, to gratify his vanity, would obscure the highest prerogative of his species?

* It was the correspondence, &c. in the week before, which produced us these grave and semi-grave epistles. We insert them in continuation of the plan mentioned in our last.—Ed.

Alas, poor punster! I pity and despise thee! I remain, Mr. Editor, your constant reader and hater of puns, SKILL.

SIR,—In your Journal of last week, an uncle of mine thought proper to expose all my peculiarities to the public gaze. Now, sir, I am extremely partial to puns. Nature did not endow me with much wit; but if she has in this respect behaved niggardly towards me, she has made me the most ample amends by endowing me with a power of perverting words and distorting sense. I would most readily play upon ideas, if I had any, instead of words; for I will confess, that in the happiest pun I ever uttered, I have marred, rather than made society. I observe, that whenever I am delivered of a pun, the heads of all who chance to understand it go up into the air like balloons at fault; and a loud and lengthened "Oh!" succeeds, which by no means promotes the free trade of conversation. But, sir, my uncle is a very disagreeable person to live with, and annoys me as much with a species of wit peculiar to himself as I can possibly disturb him with my puns—it is what in Queen Anne's time her maids of honour called "selling a bargain:" sometimes it is coarse, often inapplicable, and always annoying. I will confess, sir, that I often bring this upon myself; but then I maintain, that if he sells me any thing, he has no right to foist upon me more than I am willing to purchase. Perhaps, sir, I am not explicit: I will therefore illustrate what I mean to aver. I pride myself, sir, upon my dancing: my uncle saw me, not long since, "*chasser*" and "*croisser*," and being in a better mood than usual, complimented me by observing how remarkably well I acquitted myself. Now, sir, my uncle was dancing himself—he is old, stiff, and heavy; and I leave it to you to say if I was too severe in replying to him, that "I was sorry I could not return the compliment." He did not pause, sir, a single instant, but, turning upon his heel, said, "Yes, you can—tell a lie, as I did." I was vexed, sir, because I did not expect it; and an answer of this sort is peculiarly annoying to me—it makes me *look* I don't know how. Upon this occasion I thought to have the last word; and though my remark was not peculiarly apposite, still I wished to get out of the scrape on any terms, and rejoined—"I won't do, uncle; you have got hold of the bull by the horns." Upon which he forthwith "*wished me joy of having the other end*."

These, and such bargains as these, are my daily fare. I am confident that you will agree with me, sir, in thinking that there is no wit in them equal even to a moderate pun. But sir, upon the subject of puns my uncle is remarkably ignorant. Dr. Johnson was much too wise a man ever to have made so very silly an observation as my uncle attributes to him. The pun, such as it was, may as well be given to me as to the doctor: it was upon the occasion of a *snuff-box* being presented to Rowe, accompanied by the admonitory caution of two Greek letters, * P (for, Rowe); and the observation was, that he who could make such a pun as that *one in particular* would be capable of picking a pocket. But there is no more reason for attributing it to Dr. Johnson, either by adoption or affiliation, than there would be for making your correspondent and my uncle, Pitt Williams, support the whole of the Foundling Hospital. Again, sir: my uncle does not seem to know the great services that puns have done to the world. The main authority for the supremacy of papacy is in a pun—and not a

very good one either, unless you select the language that you tell it in—"Tu es Pierre, et sur cette pierre." If this be not a pun, it is at least a very strange coincidence of terms. Pasquin and Marforius were punsters—upon the statue itself was a pun: "Pasquinus eram, nunc lapis, forsan apis, quia pungo." My uncle contradicts me here, and classes all the Pasquins under the head of wit: he quotes without end that one recorded by Matthews in his "Diary of an Invalid," upon the occasion, in late days, of a man of the name of Cæsar espousing a lady of the name of Roma—it is in Latin, and very terse—at least my uncle tells me so, for I know nothing about it myself. On the morning after the marriage, Pasquin's trunk bore the following: "Cave, Cæsar, ne tua Roma res publica fiat!" Cæsar was angry, and retorted the next morning, in the full consciousness of his power—"Cæsar imperat." But with an obstinacy worthy of my uncle, the following morn bore the melancholy consequences—"Ergo coronabitur." This, my uncle says, is wit, in contradistinction to punning; but if I ask him to define wit, he invariably does it by exemplification. Now, this is not fair, because it is not definite, and presupposes the power of appreciating the force of the example, which I do not possess. It is all nonsense to ask me if I can define colours because I discern them, and is not in the least to the purpose—I cannot help seeing the colours, and it very rarely happens to me to see the wit. Where then is the analogy? "Don't you know where it is?" he says to me; and I reply, in order to cut the conversation quite short, "Uncle, I know nothing, care for nothing, am nothing." "You come of a very ancient family," he replies; although, being my uncle, he must know whence I come.

Now, sir, all this is very well, and may or may not be to the purpose: all that I can tell you, sir, is, that if you wish success to your Garrick Club, and allow persons to rake up old stories because they are applicable, or to put down punsters by selling them bargains, after the manner of my crochety old uncle, I can see very little probability of men with moderate abilities being acceptable members of your society. My uncle insists upon having his name put down as a candidate. I am anxious, however, that all our differences should be reconciled before we admit him; and he himself is not averse to it, having proposed a method of bringing so desirable an object to an accomplishment, in a manner, as he himself says, that must be agreeable to all. But again, sir, he does it in his old strain—by exemplification; and assures me that it may be brought about just as easily as the feud between two Indian chiefs was arranged, though the offence on each side was grievous. A wise Daniel was called in to arbitrate the matter, who most sagaciously decreed, that the "offending parties should kiss and be friends again." I accept the terms. I have the honour to be, &c. R. S.

SIR,—My nephew writes to me from London; and as you may perhaps like to see a genuine epistle of this modern Miller, I forward it neat as imported.—Your subscriber,

PITT WILLIAMS.

London, Nov. 30, 1831.

"Dear Uncle,—I arrived here last week by the "Regulator"—so slow, that I feel convinced every thing goes by it. London seems quite deserted, or rather full of that ere (air) fog; atmosphere quite like pea-soup, thick and yellow. I paid a visit to "the Brothers" at the Adelphi: heard Matthews is going to resign—Listen to have his appointment, upon "paying the difference." Saw Victorine: Mrs. Yates perfection—quite the "Guardian Naid of the Strand." A piece evidently named to puzzle the

Cockneys, the Vept of the Viah ton Viah—it ought to have been called, or the Vild Vlgvam of the Woods—is pretty good, though Celeste is not a very celestial being. Reeve, in the *Lions of Mysore*, out-Herods Herod; he is a modern Cœur de Lion, and decidedly the greatest beast I ever saw. There is also a wonderful monkey, who claws every thing, Paulo by name; I rather objected to him, as you do to the Bill, in consequence of his obnoxious claws. By the way, at Gatehead last week they enacted *Venice Preserved*, and called it "Reform must Prosper!" this is like calling *Othello* at the Coburg "Is He Jealous?" I tried this joke on with the check-taker at the theatre—he took my ticket, but not my joke; if you had seen his rage, when I told him he would not let a joke pass without a cheque! I have also patronised the Theatre de Madame; the Widow is done to the life by the Widow. She is decidedly the first *artiste* of the day; her Pandora is a *chef-d'œuvre*. In the absence of her fair and beautiful rival Sidney, a gem from the Emerald Isle has appeared in her part, Amelia Craufurd by name. Her Madame Thibaut was replete with naïveté and spirit, and she bids fair to become a popular favourite. I fear Covent Garden is doing badly. It is fully expected the High Sheriff will convene many great meetings there shortly. I should like to C (see) Kemble prosper. Was there call Pimney, the Mayor of Bristol, who escaped through the attic, the Mayor of Garrick's Attic salt with a vengeance! Did you hear your friend Frank's last? He was asked if there was any chance of Lincoln Stanhope being Lord Harrington. "He's within a foot of it," replied Frank.

DRAMA.

COVENT GARDEN.

ARNE's Opera of *Artaxerxes* was performed on Thursday, and introduced to us Miss Shireff in *Mandane*. It was her first appearance as a dramatic singer; and we beg to congratulate her upon a very meritorious and successful *début*. The qualifications of this young lady for the high station she has so suddenly assumed are various and great. Her voice is distinguished for its sweetness and flexibility—her style of singing is tasteful and expressive—and her execution, though florid, is unaccompanied by any sign of painful effort, or by any thing but the most perfect ease and propriety: in this respect, indeed, she resembles Sontag more than any English singer we have seen. To these gifts as a vocalist may be added a very pleasing countenance, a slight and agreeable figure, and, as far as we could judge under the disadvantages of a first appearance, we should pronounce her to be a very agreeable actress. We need hardly add, that her success was most complete; and we think that she may now dispense with the numerous and noisy train of supporters who occupied the theatre on Thursday evening. In no instance could the danger arising from vulgar and injudicious friends be more strikingly apparent than on this occasion. The rest of the opera was well performed, and the scenery and dresses are extremely splendid. Braham's *Artabanus* is too well known to require criticism: it was never finer. Wilson was not quite at home in *Arbaces*, and we forbear saying more because the character was new to him. Miss H. Cawse gave the recitative of *Artaxerxes* almost better than any of the other performers, and her song of "In infancy," was loudly and deservedly encored. We anticipate good houses and a replenished treasury from this excellent revival.

The same opera was done the same evening at Drury Lane, and is to be repeated to-night. Is this either wise or politic? Is not the manager rather doing himself a serious injury? If a person wishes to see *Artaxerxes*, he will naturally prefer going where there is some novelty in the cast. And why, if a family is desirous of visiting one of the theatres, is it to be compelled to see *Artaxerxes*, and nothing else? Is it to gratify Mrs. Wood, who may fear a rival "near the throne?" This lady, we can assure her, has as little to apprehend from Miss Shireff, as Miss Shireff has from her. They are as strongly contrasted as possi-

ble—they are "*paræ, magis quam similes*;" and there is "ample verge and room enough" in this great town for both.

VARIETIES.

The Apollonicon.—Here we occasionally take our ease and recreation; and we recommend all those who "delight in sweet sounds," and who wish to pass an agreeable hour, to visit this establishment, where they will be charmed with selections from our best masters, played with great taste and execution by Mr. Purkia. The overture to *Der Freischütz*, performed by machinery, is a splendid performance.

Oriental Translation Committee.—Mr. W. Huttman having resigned his situation of Secretary to the Oriental Translation Committee; at a meeting held on Monday, the 21st of November, the Right Hon. Sir G. Ouseley, Bart., chairman, in the chair, Graves C. Haughton, Esq. F.R.S., was requested to accept the office of Honorary Secretary to the committee: Mr. James Mitchell was, on the same occasion, appointed temporary Assistant Secretary.

Royal Asiatic Society.—At a meeting of the Council of the Royal Asiatic Society, held the 26th of November, the Earl of Munster, V.P. in the chair, Mr. W. Huttman's resignation of the office of Assistant Secretary and Deputy Librarian to the Society was accepted; and Mr. Mitchell was appointed *pro tempore* in his room to both of the vacant offices. At the request of the Council, Mr. Haughton agreed to superintend the affairs connected with the Secretary's office.

The Drawing-room Scrap-Book, with about forty various and beautiful engravings, illustrated by short compositions from the pen of L. E. L., many of them delightful productions, is too late for any other notice this week, than that we consider it a most graceful and interesting work, and likely to be a favourite every where.

An Essay on National Character, by the late R. Chenevix, and edited by T. Pery Knox, is, as to time, in a like predicament; but we cannot dismiss its immense erudition, great research, and great talent, in so perfunctory a manner: we trust to be able to do it something like justice in our next number.

Epigram, addressed impromptu to a newly married Lady, who had wedded a rich Booby for his Wealth, and who wore a beautiful Carnelian Heart hung round her neck by a Gold Chain.

Young Love is a tyrant, you say?

Not his chain round thy bosom is thrown;

To our breast thou art link'd for ever and aye

With a chain of gold to a heart of stone! J. R.

Moral Courage.—If moral courage is a preventive of cholera, we may be satisfied that even among the lower orders in London, yet, there is no consternation. Yesterday a fellow was leading an old starved rip of a horse down Piccadilly, to the knacker's yard; upon which, a chap of his own class said to another, "I say, Dick, what d'y'e think of that ere horse?"—"Think?" replied Dick, with a knowing look, "why I thinks as how he's got the *colliery morbus*."

Smuggling.—Hungarian tobacco is strictly prohibited at Vienna; nevertheless almost every one smokes it. The difficulty of evading the custom-house officers was one day the subject of conversation between the late Empress and Prince E——, who offered, for a high wager, to bring into Vienna a certain quantity of tobacco. He was to give notice when he should arrive. The empress issued orders that the carriage

should be stopped at the barriers, and every part searched. He arrived at night, but attended by outriders with lighted flambeaux. Her orders were strictly obeyed: almost every part of the carriage was cut to pieces, but no tobacco found. He drove immediately to the imperial palace, and produced the tobacco to the empress. The flambeaux had been contrived with a hollow space, into which tobacco had been put: the end only being a flambeau, the sides merely covered with wax.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLVIII. Dec. 3.]

A Description (intended as a Guide) of Herne Bay and its Vicinity; with an Account of the New Pier, &c.; by B. P. Capper.

A new Tale of the Beau Monde, to be entitled, the Opera, by the Author of "Mothers and Daughters."

The title of Mr. Bulwer's forthcoming novel is to be Eugene Aram.

Mr. Robert Chambers is about to publish, in a popular manner, a History of Scotland, in two pocket volumes.

LIST OF NEW BOOKS.

Tales of My Landlord, Fourth Series; Count Robert of Paris, and Castle Dangerous, by Sir Walter Scott, 4 vols. post 8vo. 2l. 2s. bds.—Trendall's Designs for Cottages and Villas, 4to. 1l. 11s. 6d. bds.—Boyle's Account of the Western Coast of Africa, 8vo. 12s. bds.—Cooke's Hints on Scarlet Fever, 8vo. 6s. 6d. bds.—The Cabal, a Tale of the Reign of William IV., 2 vols. p. 8vo. 14s. bds.—Chant of the Cholera, Songs for Ireland, &c., by the Authors of Tales by the O'Hara Family, 18mo. 3s. 6d. bds.—Authological Sacra, or Select Theological Extracts, 8vo. 1l. 4s. bds.—Valpy's Classical Library, No. XXIV.: Plutarch, Vol. 9, 18mo. 4s. 6d. bds.—Hughes's Divines, No. XIX.: Hall's Contemplations, Vol. 2, 8vo. 7s. 6d. bds.—Dewhurst's Anatomy of the Human Muscles, oblong 4to., coloured, 15s. sewed; Ditto of the Human Bones, oblong 4to., coloured, 15s. sewed.—Mary Gray, by A. Knight, 2s. hf.-bd.—Fanny and her Mother, 18mo. 1s. 6d. hf.-bd.—Geological Sketches, &c., by Maria Hack, 18mo. 9s. cloth.—Travels in the North of Europe, by C. B. Elliott, Esq., 1 vol. 8vo. 15s. bds.—Thoresby's Correspondence, 2 vols. 8vo. 1l. 8s. bds.—Romance and Reality, by L. E. L., 3 vols. 8vo. 1l. 11s. 6d. bds.—Standard Novels, No. X., 18mo. 6s. cloth.—Anecdotes of Hogarth, Part I., with Plates &c. sewed; India Proofs, 9s. sewed.—Polytechnic Library: Domestic Chemist, Vol. 2, 18mo. 4s. cloth.—Rev. Thomas Giff's Family Book of Common Prayer, 18mo. 1s. 6d. sheep.—Stories of Animals, Second Series, by Maria Hack, 18mo. 2s. 6d. hf.-bd.

METEOROLOGICAL JOURNAL, 1831.

TO CORRESPONDENTS.

To many of our correspondents we have this week only apologies to offer; for, what with the usual monthly publications, and the influx of other new works, we have been almost smothered under books during the last five days.

Dr. Elliottson was very foolish to attack us in his lecture. We will try to see the *Lancet* (is it?), and tell him what we think.

L. L. B. is intended for our next.
Sir,—As my name has frequently appeared in your interesting Journal with commendation, and as most of the Annuals have been noticed in your columns, I beg the favour of you to allow the present short note to be gazetted among the same records. In Proust's "Continental Annual," my name is put to the plate of the "Bridge at Prague," but without my permission; and what is worse, without my executing any part of the engraving. It is true that I staked the building and ground; and am only responsible for the style in which such work is "laid in," and not even for the effect of the etching proofs. I think it necessary to make this explanation to you and the public, being very scrupulous respecting my professional reputation. I regret that the publishers should have adopted such a plan; for deception can never do them good, nor advance the interests of art and literature. I remain yours, &c.

Harmondsworth,
Nov. 30th.

J. LE KEUX.

ADVERTISEMENTS,

Connected with Literature and the Arts.

TO ARTISTS, ARCHITECTS, and DRAFTSMEN.

The stated attention has been given to the Manufacture of Drawing Pencils in Cedar by S. Mardan and Co., who pledge themselves to supply nothing but pure Cumberland Lead; thereby removing those objections and annoyances so frequently complained of in Drawing Pencils. It will be satisfied to see the genuineness of these Pencils, may seem manufactured at No. 27, Castle Street, Finsbury, which establishment now has the honour, exclusively, to supply all the Government Offices.

Sold retail by all respectable Stationers, &c. throughout the United Kingdom. S. Mardan and Co.'s name is on each Pencil.

TO BOOKSELLERS and PUBLISHERS.

A respectable Young Man, aged 34, having conducted the Business of a Foreign and English Bookseller for the last Eighteen Months; but, in consequence of the Firm discontinuing Business, he is desirous of procuring a similar Situation, or as an Assistant. The Advertiser being in the receipt of a small Income, Salary will be a secondary consideration. Security to any amount can be given, together with References of the Highest Respectability.

Address, post-paid, H. B., No. 19, Peckham Grove, Peckham, Surrey.

BOOKS PUBLISHED THIS DAY.

3d edition, enlarged, 8vo. price 10s. 6d. cloth.
INQUIRIES concerning the INTELLECTUAL POWERS, and the INVESTIGATION OF TRUTH. BY JOHN ABERCROMBIE, M.D.

Fellow of the Royal College of Physicians of Edinburgh, &c. and First Physician to His Majesty in Scotland. Edinburgh, Waugh and Innes, and Whitaker, Treacher, and Co. London.

Also, lately published, by the same Author, In 8vo. 3d edition, enlarged, 15s. boards.

Pathological and Practical Researches on Diseases of the Brain and Spinal Cord.

In 8vo. 3d edition, enlarged, 15s. boards.
Pathological and Practical Researches on Diseases of the Stomach, the Intestinal Canal, the Liver, and other Viscera of the Abdomen.

In 18mo. 3d edition, enlarged, price 9s. boards.

SURE METHODS OF IMPROVING

HEALTH and PROLONGING LIFE, by regulating the Diet and Regimen. Embracing all the most approved principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the Cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life. To which are added, an Account of the Art and excellent Effects of Training for Health, Rules for reducing Corpulence, and Maxims for the Mind and Nerves, &c. Illustrated by Cases.

By T. J. GRAHAM, M.D. &c.
"We are disposed to think it the most useful and rational work of the kind we have met with. It contains many hints novel to us, and is altogether an admirable code of health."—*Atlas*, Sept. 1827.

"The tendency of this volume to advance the important objects which it proposes is unquestionable; and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1827.

"That man of all habits will derive information from it, calculated to increase their comfort and extend their days, is hardly too covetous."—*Edinburgh Observer*, Jan. 1828.

To this edition is attached an Appendix, containing a full Account of the Cholera, with the best Remedies, as ascertained by Physicians of the greatest experience in that fatal Disease. London: Published by Simpkin and Marshall, Stationers' Court; sold by all Booksellers.

Of whom may be had, Lately published, by the same Author, 2d edition, in 1 large vol. 8vo. price 10s. boards, with Engravings.

2. A Chemical Catechism, in which the

Elements of Chemistry, with all the recent Discoveries, are very clearly and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufactures, and Medicine, described. Illustrated by 120, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms.

"We esteem and recommend it. Every subject of interest connected with this delightful science is treated of in the clearest manner."—*London Weekly Review*, 21st Feb. 1828.

"Every thing is here written up to the latest date, and the work cannot fail, we think, of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—*Monthly Magazine*, 1st March, 1828.

"The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles to simple elements to the compound and illustrative branches of the study. It is very superior to Parkes's."—*Atlas*, 1st March, 1828.

Palmer's Bible Atlas: New Edition.

In royal 8vo. accompanied with a copious Index of Names in Sacred Geography, price 9s. half-bound; or, with the Maps coloured, 15s.

In a large vol. 12mo. price 10s. 6d. boards.

THE CHRISTIAN EXPOSITOR; or, a Practical Guide to the Reading of the New Testament. Intended for the Use of private Readers.

By the Rev. GEORGE HOLDEN, M.A.

"Though many Expositions of the Bible of great and deserved celebrity exist in our language, a Commentary sufficiently short to be read by those who have not leisure to consult learned works, yet sufficiently comprehensive to serve as a guide to the study of the sacred Scriptures, appears to be still wanting. To supply this deficiency is the design of the present work, in which it has been the aim and study of the author to embrace, in a condensed form, such information as will enable the general reader to ascertain the real meaning and doctrinal writers."—*Preface*. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Turner's British Shells.

In folio 8vo. with 10 coloured Plates, comprising Figures of 180 Specimens, 10s. 6d. in cloth.

A TREATISE on the NATURE and CAUSES of DOUBT in RELIGIOUS QUESTIONS; (with a particular reference to Christianity.) With an Appendix on some Common Difficulties—Lists of Books, &c. London: Printed for Longman, Rees, Orme, Brown, and Green, Paternoster Row."See a very useful little Treatise, lately published by Longman and Co. upon the subject of Doubt in Religious Questions, which may with benefit be put into the hands of a large portion of the young reading men of the present day."—*Blunt's Lectures on Abraham*, 2d edition, p. 180.

In 8vo. 2d edition, 8s. 6d. boards.

A TREATISE on PULMONARY CONSUMPTION; its Prevention and Remedy.

By JOHN MURRAY, F.R.S., F.L.S., &c.

"How can we refuse to assent to testimony as to the power of an avowed agent, which has science and experience to give it weight? With the example of Harvey, Jenner, Davy, and others, before his eyes, Mr. Murray has adopted that course of candid publicity which is most congenial to the high and noble pursuit of chemical investigation which he has chosen."—*Monthly Rev.* "Mr. Murray, in his recently published work on consumption, has deserved the gratitude of his countrymen. He has examined the disease and its remedies chemically, and appears to us to have taken new and original views of both. His work is, moreover, full of very interesting and curious facts, of a nature to escape the unscientific observer."—*Spectator*."A valuable little work."—*Record*.

Printed for Longman, Rees, Orme, Brown, and Green.

By the same Author,

Memoir on the Diamond. 12mo. 5s. cloth. A Glance at some of the Beauties and Sublimities of Switzerland. 12mo. 7s. boards.

In 1 vol. thick 8vo. price 12s.

COMMENTARIES on INSANITY.

By G. MANN BURROWS, M.D.

Member of the Royal College of Physicians of London, &c. &c. Printed for Longman, Rees, Orme, and Co. London.

"This treatise of Dr. Burrows is of a high order—it is, in fact, the most elaborate and complete general treatise on insanity that has yet appeared in the English language."—*Edinburgh Medical and Surgical Journal*."We beg to impress upon our readers the absolute necessity of attentively studying the very masterly delineation which Dr. Burrows has given of that most important of subjects, mental derangement."—*London Medical and Physical Journal*."Dr. Burrows' work really contains an immense collection of important practical information, from various sources, digested and commented on by a physician of sound judgment, accurate observation, and extensive experience."—*Medical-Chirurgical Rev.* "We consider this the first of the kind we have ever perused on the subject of which it treats. The book is written to be read a century hence."—*London Medical and Surgical Journal*."We have derived pleasure and instruction from the perusal of this valuable and elaborate work."—*London Medical Gazette*. "The work of Dr. Burrows displays of considerable research, industrious observation, correct and elevated feelings, and a spirit of candour and real love of truth. The author writes like an intelligent gentleman, a good physician, and a pure moralist."—*North American Medical and Surgical Journal*.

In 1 vol. post 8vo. price 12s.

P O E M S.

Henry Colburn and Richard Bentley, New Burlington Street.

Landscape Annual for 1822.

Price One Guinea, elegantly bound in green morocco; large paper, royal 8vo. India Proof, 21. 12s. 6d.

THE LANDSCAPE ANNUAL; or, Pictures in Italy, for 1822, illustrated with Twenty-six highly finished Engravings, from Drawings by Mr. J. D. HARDING.

The Literary Department by THOMAS ROSCOE, Esq. We select the following commendation of the literary portion of the work, from a valuable Review.

"These editorial illustrations of the engravings are for the most part written in an elegant style, and attach a value to the work, which, in our estimation, belongs to none of the Annuals but this. It is almost not simply a book to be looked at, but to be read; and on this account we greatly prefer it to those of its competitors for admiration which consist of tales, sonnets, and fictions, and 'airy nothingness.'"

Where may be had,

Volumes I. and II. from Drawings by Mr. Samuel Prout, price, uniform with the above, 12s. 6d. each; large paper, Frobis, 21. 12s. 6d. each.

The Plates of each year's volume are printed on large paper, and delivered in a portfolio, for illustrating the various Works on Italy, &c. and for the Collectors of the Engravings.

Proofs, on India paper, without writing 4s. 6d.

— with writing 5s. 6d.

— plain 3s. 6d.

Jennings and Chaplin, 65, Chancery.

ton; Harvey and Darton; J. Boker; Hunt, Chance and Co.;
Whittaker and Co.; Simpkin and Marshall; and Holdsworth
and Ball.

In 12mo. cloth boards, price 6s. with Portrait, a new edition of
DEFOE'S HISTORY OF THE PLAGUE in
1665.

"He has not been the author of 'Robinson Crusoe,' Defoe
would have deserved immortality for the genius he has displayed
in this work."—*Sir Walter Scott.*

Renshaw and Rush, 856, Strand; and James Gilbert,
61, Paternoster Row.

In 8vo. price 1s. 6d.

**A CHARGE delivered to the CLERGY
OF THE DIOCESE OF DURHAM, in 1831.**
By WILLIAM, LORD BISHOP OF DURHAM.

Printed for C. J., G., and F. Rivington, St. Paul's Church-
yard, and Waterloo Place, Pall Mall; Hatchard and Son, Picca-
dilly; Cook, Fleet Street; and G. Parker, Oxford.

2d edition, in 8vo. price 12s.

**PATHOLOGICAL and PRACTICAL
RESEARCHES ON DISEASES OF THE BRAIN and
SPINAL CORD.**

By JOHN ABERCROMBIE, M.D.
Fellow of the Royal College of Physicians in Edinburgh; Author
of "Inquiries concerning the Intellectual Powers."

By the same Author,
Pathological and Practical Researches on
Diseases of the Stomach, Liver, &c. 2d edition, 8vo. 12s.
Wang and Innes, Edinburgh; and Whittaker, Treacher,
and Co. Ave-Maria Lane, London.

In foelcap 8vo. 6s. 6d. boards.
**MENTAL RECREATION; or, Select
Maxims and Sayings of great Men of all Ages: chosen
for their peculiar Point, Brilliance, or Excellence, from above One
Hundred Authors—Grecians, Romans, Fathers of the Church,
Arabians, Chaldeans, Jews, Christians, and Moderns—French,
Spanish, &c.: Comic and Serious. With some Maxims by the
Compiler.**
London: Longman, Rees, Orme, Brown, and Green.

THE GENTLEMAN'S MAGAZINE

published Dec. 1, (price Two Shillings,) is embellished
with a View of Nottingham Castle, recently destroyed by Fire—
the Portraits of Four Necromancers—and a Cistern bearing the
Arms of Henry VII. Among other Articles, it contains—Re-
marks on the New Metropolitan Coal Act—on the Founder of
Sunday Schools—the Character of John Knox—the Manufacture
of Glass—Pluralities held by Puritans—Brougham Castle and
Brougham Hall—Easter Eggs—Early Annals of History, and
M. Niebuhr, &c. &c. Several Articles in Classical Literature—
Reviews of New Publications—Historical Notes on the Cholera—
Obituary, with Memoirs of Lord Le Despencer—Right Hon. John
Calcraft—J. H. North, Esq. M.P.—General Loftus—the Rev.
S. Beyer—M. Hathaway, Esq. and other distinguished individuals.
Published by John Harris, St. Paul's Churchyard.

Library of Modern Fiction.

In 60 vols. post 8vo. price only 6s. per vol. neatly bound.
**THE MODERN NOVELISTS; a Selection
of the best recent Works of Fiction, from the pens
of the most eminent Authors; among which will be found Works
of Mr. Ward (the Author of Tremaine)—Mr. Lister (the Author
of Granby)—Mr. Theodore Hook—Mr. Horace Smith—Mr.
Grattan—Mr. Bulwer, &c. &c. As the impression of this cheap and unique Collection is
limited to 850 Copies, those who are desirous of procuring them,
are requested to transmit their Orders forthwith to their re-
spective Booksellers.**
Henry Colburn and Richard Bentley, New Burlington Street.

8vo. price 7s. 6d.

THE MODERN SABBATH

EXAMINED.
"The Bible, I say, the Bible only, is the religion of Protestants.
Whatever else they believe besides it, and the plain, irrefragable,
indubitable consequences of it, well may they hold it as a matter
of opinion; but as matter of faith and religion, neither can they
with coherence to their own graven idols believe it themselves, nor
require the belief of it of others, without the most high and most
schematic presumption."—*CHAMBERS.*

BOOKS IN THE PRESS.

On Wednesday next will be published, in 4to. sewed, with Four
Quarto Plates on the Resemblance of Florida and an Map of
and Two large Folding Plates on the Tides in every Part of the
World, price 1l. 12s.

THE PHILOSOPHICAL TRANS-

ACTIONS OF THE ROYAL SOCIETY OF LONDON,
1831, Part II.

Containing Mr. Lubbock's Two Papers on the Theory of the
Moon; Mr. Faraday on Accents Figures on Floating Elastic
Surfaces—Mr. Davies Gilbert's Computations relative to Sus-
pension Bridges—Captain Kater on the Imperial Standard Yard
—Mr. Ivory on the Theory of Elliptic Transcendents—Mr. Lub-
bock on the Tides in the Port of London—Sir James South on
the Atmosphere of the Planet Mars—Mr. Bessel on the Preces-
sion of Florida—Professor Daniell on a New Register, Pyrameter,
Captain Sabine on the Second's Pendulum—Dr. Fritsch on the
Circulation of the Blood—Mr. Harris on Magnetic Action, and
on the Force of a Magnet—Meteorological Journal, January to
June, 1831.

Early in December,

THE ROBBERS.
By the Author of "Charley the Fatalist." In 3 vols.
Now ready,

II.
Cameron. A Novel. In 3 vols.

"Written with a good deal of talent. Its dialogues and scenes
are supported with a truth and force which sometimes very
strongly remind us of the authors of 'Self-Confidence,' and some-
times, again, of the authors of 'Marriage,' and 'Inheritance.'
There are some scenes of life in Scotland scarcely to be surpas-
sed."—*Spectator.*

III.
Lives of the Italian Poets. By the Rev. H.
Stebbing. New edition, with several new Lives, including that
of Ugo Foscolo, and other important Additions. 3 vols.

IV.
The False Step. A Novel. In 3 vols.
"A story of deep interest, powerful description, teaching re-
flection, and inculcating a useful lesson."—*Metropolitan.*

V.
The Anatomy of Society. By J. A. St. John.
In 2 vols.
"This work teems with thought."—*Herald.*

VI.
The King's Secret. By the Author of the
"Lost Heir." New edition, 8 vols.
"One of the very best of our fictions."—*Literary Gazette.*

SATURDAY, DECEMBER 10, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Hood's Comic Annual for 1832. Tilt.

POETRY.

"John Day; a pathetic Ballad.

A Day after the fair.—*Old Proverb.*

John Day he was the biggest man
Of all the coachman-kind,
With back too broad to be conceived
By any narrow mind.

The very horses knew his weight
When he was in the rear,
And wish'd his box a Christmas-box,
To come but once a-year.

Alas! against the shafts of love,
What armour can avail?
Soon Cupid sent an arrow through
His scarlet coat of mail.

The bar-maid of the Crown he loved,
From whom he never ranged;
For though he changed his horses there,
His love he never changed.

He thought her fairest of all fares,
So fondly love prefers;
And often, among twelve outsiders,
Deemed no outside like her's.

One day, as she was sitting down
Beside the porter-pump—
He came, and knelt with all his fat,
And made an offer plump.

Said she, "My taste will never learn
To like so huge a man;
So I must beg you will come here
As little as you can."

But still he stoutly urged his suit,
With vows, and sighs, and tears,
Yet could not pierce her heart, although
He drove the Dart for years.

In vain he wooed, in vain he sued;
The maid was cold and proud,
And sent him off to Coventry,
While on his way to Stroud.

He fretted all the way to Stroud,
And thence all back to town;
The course of love was never smooth—
So his went up and down.

At last her coldness made him pine
To merely bones and skin;
But still he loved like one resolved
To love through thick and thin.

"Oh, Mary! view my wasted back,
And see my dwindled calf;
Though I have never had a wife,
I've lost my better half."

Alas! in vain he still assail'd,
Her heart withstood the dint;
Though he had carried sixteen stone,
He could not move a flint.

Worn out, at last he made a vow
To break his being's link;
For he was so reduced in size,
At nothing he could shrink.

Now some will talk in water's praise,
And waste a deal of breath;
But John, though he drank nothing else,
He drank himself to death.

The cruel maid that caused his love,
Found out the fatal close;
For looking in the butt, she saw
The butt-end of his woes.

Some say his spirit haunts the Crown—
But that is only talk;
For, after riding all his life,
His ghost objects to walk."

PROSE.

"The Island.

"Oh, had I some sweet little isle of my own!"—*Moore.*

"If the author of the Irish Melodies had ever had a little isle so much his own as I have possessed, he might not have found it so sweet as the song anticipates. It has been my for-

tune, like Robinson Crusoe and Alexander Selkirk, to be thrown on such a desolate spot; and I felt so lonely, though I had a follower, that I wish Moore had been there. I had the honour of being in that tremendous action of Finisterre, which proved an end of the earth to many a brave fellow. I was ordered with a boarding party to forcibly enter the Santissima Trinidad. But in the act of climbing into the quarter-gallery,—which, however, gave no quarter,—was rebutted by the butt-end of a marine's gun, who remained the quarter-master of the place. I fell senseless into the sea, and should, no doubt, have perished in the waters of oblivion, but for the kindness of John Monday, who picked me up to go adrift with him in one of the ship's boats. All our oars were carried away—that is to say, we did not carry away any oars; and while shot was raining, our feeble hailing was unheeded. In short, as Shakespeare says, we were drifted off by 'the current of a heady fight.' As may be supposed, our boat was any thing but the jolly-boat; for we had no provisions to spare, in the middle of an immense waste; we were, in fact, adrift in the cutter, with nothing to cut. We had not even junk for junketing, and nothing but salt-water, even if the wind should blow fresh. Famine, indeed, seemed to stare each of us in the face—that is, we stared at one another; but if men turn cannibals, a great allowance must be made for a short ditto. We were truly in a very disagreeable pickle, with oceans of brine, and no beef; and, like Shylock, I fancy we would have exchanged a pound of gold for a pound of flesh. The more we drifted Nor, the more sharply we inclined to gnaw; but when we drifted Sow, we found nothing like pork. No bread rose in the east; and in the opposite point we were equally disappointed. We could not compass a meal any how—but got mealy-mouthed, notwithstanding. We could see the sea-mews to the eastward, flying over what Byron calls the Gardens of Gull. We saw plenty of grampus; but they were useless to all intents and purposes, and we had no bait for catching a bottle-nose. Time hung heavily on our hands—for our fast days seemed to pass very slowly, and our strength was rapidly sinking, from being so much afloat. Still we nourished Hope, though we had nothing to give her. But at last we lost all prospect of land—if one may so say, when no land was in sight. The weather got thicker as we were getting thinner; and though we kept a sharp watch, it was a very bad look-out. We could see nothing before us but nothing to eat and drink. At last the fog cleared off, and we saw something like land right a-head; but, alas! the wind was in our teeth as well as in our stomachs. We could do nothing but keep her near; and as we could not keep ourselves full, we luckily suited the course of the boat; so that after a tedious beating-about—for the wind not only gives blows, but takes a great deal of beating—we came incontinently to an island. Here we landed; and our first impulse on coming to

dry land was to drink. There was a little brook at hand, to which we applied ourselves till it seemed actually to murmur at our insatiable thirst. Our next care was to look for some food; for though our hearts were full at our escape, the neighbouring region was dreadfully empty. We succeeded in getting some natives out of their bed, and ate them, poor things, as fast as they got up, but with some difficulty in getting them open; a common oyster-knife would have been worth the price of a sceptre. Our next concern was to look out for a lodging; and at last we discovered an empty cave, reminding me of an old inscription at Portsmouth—'The hole of this place to let.' We took the precaution of rolling some great stones to the entrance, for fear of last lodgers,—that some bear might come home from business, or a tiger to tea. Here, under the rock, we slept without rocking; and when, through the night's failing, the day broke, we saw, with the first instalment of light, that we were upon a small desert isle, now for the first time an Isle of Man. Accordingly, the birds in this wild solitude were so little wild, that a number of boobies and noddies allowed themselves to be taken by hand, though the asses were not such asses as to be caught. There was an abundance of rabbits, which we chased unremittingly, as Hunt runs Warren; and when coats and trousers fell short, we clothed our skins with theirs, till, as Monday said, we each represented a burrow. In this work Monday was the tailor; for, like the maker of shadowy rabbits and cocks upon the wall, he could turn his hand to any thing. He became a potter, a carpenter, a butcher, and a baker—that is to say, a master butcher and a master baker, for I became merely his journeyman. Reduced to a state of nature, Monday's favourite phrase for our condition, I found my being an officer fulfilled no office—to confess the truth, I made a very poor sort of savage; whereas Monday, I am persuaded, would have been made a chief by any tribe whatever. Our situations in life were completely reversed—he became the leader, and I the follower; or rather, to do justice to his attachment and ability, he became like a strong, big brother to a helpless little one. We remained in a state of nature five years; when at last a whaler of Hull, though the hull was not visible, shewed her masts on the horizon—an event which was telegraphed by Monday, who began saying his prayers and dancing the college hornpipe at the same time with equal fervour. We contrived, by lighting a fire, literally a *feu-de-joie*, to make a sign of distress, and a boat came to our signal deliverance. We had a prosperous passage home, where the reader may anticipate the happiness that awaited us—but not the trouble that was in store for me and Monday. Our parting was out of the question; we would both rather have parted from our sheet-anchor. We attempted to return to our relative rank; but we had lived so long in a kind of liberty and equality, that we could never resume our grades. The state of nature remained upper-

most with us both, and Monday still watched over and tended me, like Dominie Sampson with the boy Harry Bertram; go where I would, he followed with the dogged pertinacity of Tom Pipes; and do what I might, he interfered with the resolute vigour of John Dory in 'Wild Oats.' This disposition involved us daily, nay hourly, in the most embarrassing circumstances; and how the connexion might have terminated I know not, if it had not been speedily dissolved in a very unexpected manner. One morning poor Monday was found on his bed in a sort of convulsion, which barely enabled him to grasp my hand, and to falter out—'Good bye! I am go—going—back—to a state of nature.'"

From the foregoing entire specimens in verse and prose, our readers may perceive that Mr. Hood continues to sustain his fame, as the best player upon words extant in the English tongue. His *facetas*, with occasional resemblances to foregone ideas, are of undiminished oddity; and when we thus see the year's harvest of his humour gathered into one comic granary, we wonder at the multitude of strange and ludicrous images which his mind has conjured up, not merely from the realm of orthoepy, but from the superior region of wit. As we have, however, in several preceding *Gazettes*, entertained various remarks on punning, we shall not here, in our reviewing department, enter upon that debatable subject. Suffice it to say, that if drollery in picture and in language be entertaining, the *Comic Annual* will be found to be a very entertaining companion; and, to augment our praise in the style most likely to promote the wide diffusion of its popularity in these days, we will add, that it must be strongly anti-cholera-morbid.

It begins with the Pugaley papers, giving a laughable account of a Cockney family, transported, by a freak of fortune, from a shoe-shop in the Barbican to an estate in the fens of Lincolnshire. Of their several agricultural pursuits, the father, mother, daughters, and sons, write their several descriptions to friends in town; and the whole is a pleasant burlesque on family papers. For example, in the first letter from Master Richard Pugaley to Master Robert Rogers, 132, Barbican, he invites him to come and enjoy the country sports:

"Now, Bob, I'll tell you what I want. I want you to come down here for the holidays. Don't be afraid. Ask your sister to ask your mother to ask your father to let you come. It's only ninety mile. If you're out of pocket money, you can walk, and beg a lift now and then, or swing by the dickies. Put on cordroys, and don't care for cut behind. The two prentices, George and Will, are here to be made farmers of; and brother Nick is took home from school, to help in agriculture. We like farming very much, it's capital fun. Us four have got a gun, and go out shooting; it's a famous good un, and sure to go off if you don't full cock it. Tiger is to be our shooting dog, as soon as he has left off killing the sheep. He's a real savage, and worries cats beautiful. Before father comes down we mean to bait our bull with him. There's plenty of New Rivers about, and we're going a-fishing as soon as we have mended our top joint. We've killed one of our sheep on the sly, to get gentles. We've a pony, too, to ride upon, when we can catch him; but he's loose in the paddock, and has neither mane nor tail to signify to lay hold of. Isn't it prime, Bob? You must come. If your mother won't give your father leave to allow you—run away. Remember, you turn up Goswell Street to go to Lincolnshire, and ask for Middlefen Hall."

There's a pond full of frogs, but we won't pelt them till you come; but let it be before Sunday, as there's our own orchard to rob, and the fruit's to be gathered on Monday. If you like sucking raw eggs, we know where the hens lay, and mother don't; and I'm bound there's lots of birds' nests. Do come, Bob, and I'll shew you the wasp's nest, and every thing that can make you comfortable. I dare say you could borrow your father's volunteer musket of him, without his knowing of it; but be sure any how to bring the ramrod, as we have mislaid our's by firing it off."

One of the sisters, of a domestic and managing turn (the other is sentimental), writes:

"Altho' things may not turn out to wish at present, yet all well-directed efforts are sure to meet reward in the end; and altho' I have chumped and churned two days running, and it's nothing yet but curds and whey, I should be wrong to despair of eating butter of my own making before I die. Considering the adulteration committed by every article in London, I was never happier in any prospect than of drinking my own milk, fattening my own calves, and laying my own eggs. We cackle so much, I am sure we new-lay somewhere, though I cannot find out our nests; and I am looking every day to have chickens, as one pepper-and-salt-coloured hen has been sitting these two months. When a poor ignorant bird sets me such an example of patience, how can I repine at the hardest domestic drudgery! Mother and I have worked like horses, to be sure, ever since we came to the estate; but if we die in it, we know it's for the good of the family, and to agreeably surprise my father, who is still in town, winding up his books. For my own part, if it was right to look at things so selfishly, I should say I never was so happy in my life; though I own I have cried more since coming here than I ever remember before. You will confess my crosses and losses have been unusual trials, when I tell you, out of all my makings, and bakings, and brewings, and preservings, there has been nothing either eatable or drinkable; and, what is more painful to an affectionate mind, have half-poisoned the whole family with home-made ketchup of toadstools, by mistake for mushrooms."

"I mean to attempt cream cheese as soon as we can get cream,—but as yet we can't drive the cows home to be milked for the bull—he has twice hunted Grace and me into fits, and kept my poor mother a whole morning in the pigstye. As I know you like country delicacies, you will receive a pound of my fresh butter when it comes, and I mean to add a cheese as soon as I can get one to stick together. I shall send also some family pork for governess, of our own killing, as we wring a pig's neck on Saturday. I did hope to give you the unexpected treat of a home-made loaf, but it was forgot in the oven from ten to six, and so too black to offer. However, I hope to surprise you with one by Monday's carrier. Anastasia bids me add, she will send a nosegay for respected Mrs. Tombleson, if the plants don't die off before, which I am sorry to say is not improbable. It's really shocking to see the failure of her cultivated taste, and one in particular, that must be owned a very pretty idea. When we came, there was a vast number of flower-roots, but jumbled without any regular order, till Anastasia trowelled them all up, and set them in again, in the quadrille figures. It must have looked sweetly elegant, if it had agreed with them, but they have all dwindled and drooped like deep declines and consumptions. Her dahlias and tulips too have turned

out nothing but onions and kidney potatoes, and her ten-week stocks have not come up in twenty. But, as Shakspeare says, 'Adversity is a precious toad—that teaches us Patience is a jewel.' Considering the unsettled state of coming in, I must conclude, but could not resist giving your friendliness a short account of the happy change that has occurred, and our increase of comforts. I would write more; but I know you will excuse my listening to the calls of dumb animals. It's the time I always scald the little pigs' bread and milk, and put saucers of clean water for the ducks and geese. There are the fowls' beds to make with fresh straw, and a hundred similar things that country people are obliged to think of. The children, I am happy to say, are all well, only baby is a little fractious; we think from Grace setting him down in the nettles, and he was short-coated last week. Grace is poorly with a cold, and Anastasia has got a sore throat, from sitting up fruitlessly in the orchard to hear the nightingale; perhaps there may not be any in the Fens. I seem to have a trifling ague and rheumatism myself; but it may be only a stiffness from so much churning, and the great family wash-up of every thing we had directly we came down, for the sake of grass-bleaching on the lawn. With these exceptions, we are all in perfect health and happiness, and unite in love."

Mrs. Pugaley's details are perhaps yet more amusing.

"I take (she says, in writing to her sister) the opportunity of the family being all resting in bed, and the house all still, to give an account of our moving. The things all got here safe, with the exception of the crockery and glass, which came down with the dresser, about an hour after its arrival. Perhaps if we hadn't overloaded it with the whole of our breakables, it wouldn't have given way—as it is, we have only one plate left, and that's chipped, and a mug without a spout to keep it in countenance. Our furniture, &c. came by the waggon, and I am sorry to say a poor family at the same time, and the little idle boys with their knives have carved and scarified my rosewood legs, and what is worse, not of the same pattern: but as people say, two Lincolnshire removes are as bad as a fire of London. The first thing I did on coming down was to see to the sweeps going up—but I wish I had been less precipitant, for the suttly wretches stole four good fitches of bacon, as was up the kitchen chimney, quite unbeknown to me. We have filled up the vacancy with more, which smoke us dreadfully, but what is to be cured must be endured. The next thing was to have all holes and corners cleared out, and washed, and scrubbed, being left, like bachelor's places, in a sad state by single W.; for a rich man, I never saw one that wanted so much cleaning out. There were heaps of dung about, as high as haystacks, and it cost me five shillings a load to have it carted off the premises; besides heaps of good-for-nothing littering straw, that I gave to the boys for bonfires. We are not all to rights yet, but Rome wasn't built in St. Thomas's day. It was providential I hampered myself with cold provisions, for, except the bacon, there were no eatables in the house. What old W. lived upon is a mystery, except salads, for we found a whole field of beet-root, which, all but a few plants for Dorothy to pickle, I had chucked away. As the ground was then clear for sowing up a crop, I directed George to plough it up, but he met with agricultural distress. He went, as soon as he whipped his horses, the plough stuck its nose in the earth, and tumbled over

head and heels. It seems very odd when ploughing is so easy to look at, but I trust he will do better in time. Experience makes a King Solomon of a Tom Noddy. I expect we shall have bushels upon bushels of corn, though sadly pecked by the birds, as I have had all the scarecrows taken down for fear of the children dreaming of them for bogies. For the same dear little sakes I have had the well filled up, and the nasty sharp iron spikes drawn out of all the rakes and harrows. Nobody shall say to my teeth, I am not a good mother. With these precautions I trust the young ones will enjoy the country when the gipsies have left, but till then, I confine them to round the house, as its no use shutting the stable door after you've had a child stole. We have a good many fine fields of hay, which I mean to have reaped directly, wet or shine; for delays are as dangerous as pickles in glazed pans. Perhaps St. Swithin's is in our favour, for if the stacks are put up dampish they won't catch fire so easily, if Swing should come into these parts. The poor boys have made themselves very industrious in shooting off the birds, and hunting away all the vermin, besides cutting down trees. As I knew it was profitable to fell timber, I directed them to begin with a very ugly straggling old hollow tree next the premises, but it fell the wrong way, and knocked down the cow-house. Luckily the poor animals were all in the clover-field at the time. George says it wouldn't have happened, but for a violent sow, or rather sow-west,—and its likely enough, but its an ill wind that blows nothing to nobody. Having writ last post to Mr. P., I have no occasion to make you a country commissioner. Anastasia, indeed, wants to have books about every thing, but for my part and Dorothy's, we don't put much faith in authorized receipts and directions, but trust more to nature and common sense. For instance, in fattening a goose, reason points to sage and onions,—why our own don't thrive on it, is very mysterious. We have a beautiful poultry yard, only infested with rats,—but I have made up a poison, that, I know by the poor ducks, will kill them if they eat it. I expected to send you a quantity of wall-fruit, for preserving, and am sorry you bought the brandy beforehand, as it has all vanished in one night by picking and stealing, notwithstanding I had ten dozen of bottles broke on purpose to stick a-top of the wall. But I rather think they came over the pales, as George, who is very thoughtless, had driven in all the new tenter hooks with the points downwards. Our apples and pears would have gone too, but luckily we heard a noise in the dark, and threw brickbats out of window, that alarmed the thieves by smashing the cow-cumber frames. However, I mean on Monday to make sure of the orchard, by gathering the trees,—a pheasant in one's hand is worth two cock sparrows in a bush. One comfort is, the house-dog is very vicious, and won't let any of us stir in or out after dark—indeed, nothing can be more furious, except the bull, and at me in particular. You would think he knew my inward thoughts, and that I intend to have him roasted whole when we give our grand house-warming regalia.—With these particulars, I remain."

The father's letter, negotiating for a return to his shop and business, is a happy adaptation of the style of town tradesmen's advertisements and common parlance. We copy a few sentences by way of sample.

"Our bull, after killing the house-dog, and tossing William, has gone wild, and had the madness to run away from his livelihood, and

what is worse, all the cows after him—except those that had burst themselves in the clover-field, and a small dividend, as I may say, of one in the pound. Another item, the pigs, to save bread and milk, have been turned into the woods for acorns, and is an article producing no returns, as not one has yet come back. Poultry ditto. Sedulously cultivating an enlarged connexion in the Turkey line, such the antipathy to gipsies, the whole breed, geese and ducks inclusive, removed themselves from the premises by night, directly a strolling camp came and set up in the neighbourhood. To avoid prolixity, when I came to take stock, there was no stock to take—namely, no eggs, no butter, no cheese, no corn, no hay, no bread, no beer—no water even—nothing but the mere commodious premises, and fixtures, and goodwill—and candour compels to add, a very small quantity on hand of the last-named particular. To add to stagnation, neither of my two sons in the business, nor the two apprentices, have been so diligently punctual in executing country orders with despatch and fidelity, as laudable ambition desires, but have gone about fishing and shooting—and William has suffered a loss of three fingers, by his unvarying system of high charges."

Newgate Ballads are humorous burlesques of the ballad-making school of the day; and in Domestic Didactics there is some fair jesting with the recent publication of works from the pens of servants. Of the former, lines to Mary, a convict, are the most punningly and punishingly pointed. *Ex. gr.*

"Or, when my suit I first prefer'd,
To bring your coldness to repentance,
Before I hammer'd out a word,
How could I dream you'd heard a sentence?
Or when with all the warmth of youth
I strove to prove my love no fiction;
How could I guess I urged a truth
On one already past conviction?
How could I dream that ivory part,
Your hand—where I have look'd and linger'd,
Although it stole away my heart,
Had been held up as one light-finger'd?
In melting verse your charms I drew,
The charms in which my muse delighted—
Alas! the lay, I thought was new,
Spoke only what had been *indited*!
Oh! when that form, a lovely one,
Hung on the neck its arms had flown to;
I little thought that you had run
A chance of hanging on your own too!"

In the Domestic Didactics, the ascent to the summit of Mount Blank is highly laughable.

The following we insert as an original poetical *jeu d'esprit*, being a model for a new art of writing blank verse in rhyme:

A Nocturnal Sketch.

"Even is come; and from the dark Park, hark,
The signal of the setting sun—one gun!
And six is sounding from the chime, prime time
To go and see the Drury Lane Deane slain,—
Or hear Othello's jealous doubt spout out,—
Or Macbeth raving at that shade-made blade,
Denying to his frantic clutch much touch—
Or else to see Ducrow with wide stride ride
Four horses as no other man can split;
Or, in the small Olympic pit, sit, split;
Laughing at Liston, while you quiz his phiz.
Anon Night comes, and with her wings brings things
Such as, with his poetic tongue, Young sung;
The gas up-blazes with its bright white light,
And paralytic watchmen prowl, howl, growl,
About the streets, and take up Fall-Mall Sal,
Who, hasting to her nightly jobs, robs fobs.
Now thieves to enter for your cash, smash, crash,
Past drowsy Charley, in a deep sleep, creep;
But frighten'd by Policeman B. 3, flee, "No go!"
And while they're going, whisper low, "No go!"
Now puss, while folks are in their beds, treads leads,
And sleepers waking, grumble—"drat that cat!"
Who in the gutter leaps, squalls, mauls
Some feline foe, and screams in shrill ill-will.
Now Bulls of Bashan, of a prize size, rise
In childish dreams, and with a roar gear poor
Georgy, or Charles, or Billy, willy nilly—
But nursemaid in a nightmare rest, chest-press'd,
Dreameth of one of her old flames, James Ganes,
And that she bears—what faith is man's!—Ann's
hams

And his, from Reverend Mr. Rice, twice, thrice;
White ribands flourish, and a stout shout out,
That upwards goes, shows Rose knows those bows'
woes!"

The life of Zimmerman, the Solitary, has also much originality;—but we must now wind up with two or three miscellaneous quotations.

"A few Lines on completing Forty-seven.

When I reflect with serious sense,
While years and years run on,
How soon I may be summon'd hence—
There's cook a-calling John.
Our lives are built so frail and poor,
On sand, and not on rocks:
We're hourly standing at Death's door—
There's some one double-knocks.
All human days have settled terms—
Our fates we cannot force:
This flesh of mine will feed the worms—
They're come to lunch, of course.
And when my body's turn'd to clay,
And dear friends hear my knell,
O, let them give a sigh, and say—
I hear the upstairs bell."

Part of a letter from an old sportsman.

"The lads go out after Burds now and then, but I seldom cum at the rites of there shutting—
—you know

Wat is Hits is Histery,
But what is mist is mistery.

Talking of shutting, hav you seen Ubbard's new guns like wauking sticks—there a capital defence agin capital offences; as you may ether stick a feller or Shute him; or boath togethir. I wish farmer Gale had carried one last friday, for he was Rob'd cuming from markit by a foot paddy Irish man, that knockd him down to make him Stand. Luckily he had nothin on him when Stopped but sum notes of the Barnaby bank that had been stopd the weak afore. In the fishing line I am quite Dead bait, tho I have had manny a Good run in my tim, Partickler when the keeper spide me out where I hadent got Leaf. The last tim I went I could hardly un do my rod for roomatir in my joints, and I got the Lumbago verry bad wen I cum Back, and its atax I dont like. Beside wich I found verry Little big fish on a count of the pochers, who Kil em al in colde blood. I used sumtims to fote and sumtims to fil, but our waters is so over fishd theres no fish to be had, and as I am verry musicle, I dont like trolling without a catch, the last jack I caut was with my boot, and was only a foot long. As for racing, I never cared much a bout it; and in regard of betting, I am Better with out it, tho I al ways take the feeld wen I am Able, and suport the Farmer's Plate with al my Mite. Our Wist club is going of, Some of the members go on so; two of em are perpetuly quareling like anny thing but double dummies, for one plays like Hoyle and the other like Vinegar. The young men hav interduced Shorts, but I dont think theyle Last long. They are al so verry Sharp at the Pints, and as for drinking, I never se sich Liquorish Chaps in my life. They are al ways laying ods, even at Super, when theyle Bet about the age of a Roasted foul, wich they cal Chicken hazzard, or about the Wait of a Curran py, wich they cal the Currancy question. They al so smoke a grade manny seagars, but they cant put the old men's pips out, wich it Wood be a Burning shame if they did. I am sorry to say politicks has Crept in; Sum is al for reform, and sum is al for none at al, and the only thing they agre in is, that the land Lord shant bring in no Bil. There is besides grade discussins as to the new game laws, sum enteraning douts when sum people go out a shutting, wether even acts of Parliament will inable them to shute anny game."

"A horse-dealer" is one of Hood's most characteristic portraits.

"A horse-dealer is a double dealer, for he dealeth more in double meanings than your punster. When he giveth his word it signifieth little, howbeit it standeth for two significations. He putteth his promises like his colts, in a break. Over his mouth, truth, like the turnpike-man, writeth up no trust. Whenever he speaketh, his spoke hath more turns than the fore-wheel. He telleth lies, not white only, or black, but likewise grey, bay, chestnut-brown, cream, and roan—pyebald and skewbald. He sweareth as many oaths out of court as any man, and more in; for he will swear two ways about a horse's dam. If, by God's grace, he be something honest, it is only a dapple, for he can be fair and unfair at once. He hath much imagination, for he selleth a complete set of capital harness, of which there be no traces. He advertiseth a coach, warranted on its first wheels, and truly the hind pair are wanting to the bargain. A carriage that hath travelled twenty summers and winters, he describeth well-seasoned. He knocketh down machine-horses that have been knocked up on the road, but is so tender of heart to his animals, that he parteth with none for a fault; 'for,' as he sayeth, 'blindness or lameness be misfortunes.'

A nag, proper only for dog's meat, he writeth down, but crieth up, 'fit to go to any hounds;' or, as may be, 'would suit a timid gentleman.' String-halt he calleth 'grand action,' and kicking 'lifting the feet well up.' If a mare have the farcical disease, he nameth her 'out of comedy;' and selleth Blackbird for a racer because he hath a running thrush. Horses that drink only water, he justly warranteth to be 'temperate,' and if dead lame, declareth them 'good in all their paces,' seeing that they can go but one. Roaring he calleth 'sound;' and a steed that high bloweth in running, he compareth to Eclipse, for he outstrippeth the wind. Another might be entered at a steeple chase, for why—he is as fast as a church. Thorough-pin with him is synonymous with 'perfect leg.' If a nag cougheth, 'tis 'a clever hack.' If his knees be fractured, he is 'well broke for gig or saddle.' If he reareth, he is 'above sixteen hands high.' If he hath drawn a tierce in a cart, he is a good fencer. If he biteth, he shews good courage; and he is playful merely, though he should play the devil. If he runneth away, he calleth him 'off the Gretna Road, and has been used to carry a lady.' If a cob stumbleth, he con-

sidereth him a true goer, and addeth 'the proprietor parteth from him to go abroad.' Thus, without much profession of religion, yet is he truly Christian-like in practice, for he dealeth not in detraction, and would not disparage the character even of a brute. Like unto love, he is blind unto all blemishes, and seeth only a virtue, meanwhile he gazeth at a vice. He taketh the kick of a nag's hoof like a love-token, saying only, before standers-by, 'Poor fellow,—he knoweth me!'—and is content rather to pass as a bad rider, than that the horse should be held restive or over-mettlesome, which discharges him from its back. If it hath bitten him beside, and moreover bruised his limb against a coach-wheel, then, constantly returning good for evil, he giveth it but the better character, and recommendeth it before all the studs in his stable. In short, the worse a horse may be, the more he chanteth his praise, like a crow that croweth over Old Ball, whose lot it is on a common to meet with the common lot."

We should add, that the *Comic Annual* is dedicated to the King; and that we are enabled to ornament our review with two specimens of the prints,—“second sight”—a ludicrous double, and an “icy coolness between friends.”

SECOND SIGHT.

COOLNESS BETWEEN FRIENDS.

Aldine Poets, Vol. XVII. Poems of Milton, Vol. I. 12mo. pp. circ. 300. London, 1832. Pickering.

THIS beautiful edition has now commenced the works of our only English epic poet; and we need not add that the volumes devoted to Milton will be the most valuable among the collection. Nothing very new can now be elicited in a life of Milton; but the greatest care has been bestowed by Mr. Mitford in comparing and collecting his authorities; and his memoir has been compiled in a strict spirit of antiquarian research. Much pains has been bestowed on the question of the sale of the "Paradise Lost." That Milton certainly met not with that present and high reward, that great and instant popularity, which should have heralded his glorious futurity, is what no one can deny; still, considering the complete downfall of his party, and the state of literature

at the time, the sale of his great work was better than could have been expected.

"He sold his copy to Samuel Simmons, April 27, 1667, for an immediate payment of five pounds, with a stipulation to receive five pounds more when thirteen hundred of the first edition should be sold: again five pounds after the sale of the same number of the second edition, and another five pounds after the same sale of the third. None of the three editions were to be extended beyond fifteen hundred copies. The first edition was of the poem in ten books, in small quarto, which were advertised, plainly and neatly bound, at the price of three shillings. The titles were varied, in order to circulate the edition in 1667, 1668, 1669. Of these there were no less than five. An advertisement and the arguments of the books were omitted in some copies, and inserted in others: and, from variations in the text, it

would appear that single pages were cancelled and reprinted. The sale gave him in two years a right to his second payment; for which the receipt was signed April 26, 1669. The second edition was not given till 1674, and was printed in small octavo; and the number of books was increased to twelve, by a division of the seventh and twelfth, with the introduction of a few connecting lines. He did not live to receive the payment stipulated for this impression. The third edition was published in 1678, and his widow agreed with Simmons the printer to receive eight pounds as her right, and gave him a general release, dated April 28, 1681. Simmons covenanted to transfer the right for twenty-five pounds to Brabazon Aylmer, a bookseller, and Aylmer sold to Jacob Tonson half of it, August 17, 1683; and the other half, March 24, 1690, at a price considerably advanced."

A very beautiful and just piece of criticism winds up the memoir.

"In Milton was united, for the first and perhaps for the last time, the imagination of the poet and the belief of the puritan—of materials so opposite was his exalted character composed; yet both were perhaps equally necessary for the erection of the costly fabric of his fame. Had he not been a poet, he would not have been distinguished above other men of like persuasion with himself; men of vigorous minds and unquestioned integrity, the Vanes, the Sydneys, the Fleetwoods, of the age. As a scholar, perhaps he would have still stood eminently distinguished and alone; but Harrington excelled him in political wisdom, and Hall and other prelates in theological learning. Had he not been imbued with the austere feelings, the solemn and severe religion of the puritans, we should indeed still have possessed from his genius creations of surpassing beauty; but they would have been altogether of a different kind. We should have had the enchantments of Comus, the sounds of revelry, and Circe's cup; but we should have wanted the songs of a higher mood, the voice of woe, the sorrows and the pride of the Hebrew captive. We should not have been carried back, as it were by vision, into the dark and austere learning of the Sanhedrim, and had the teraphim, and the ephod, pall and mitre, and 'the old flamen's vestry,' brought before our eyes. We should still have possessed the noblest epic of modern days; but its argument would not have been the talk of angels, the sullen despair, or the haughty resolves of rebellious spirits, the contrition of fallen man, or the decrees of eternal wisdom. We should have had tales of chivalrous emprise, 'of gentle knights that pricked along the plain,' the cruelty of inexorable beauty, and the achievements of unconquerable love. Its scenes would not have been laid in the bowers of paradise, or by the 'thunderous throne' of heaven, nor where the wings of the cherubim fan the mercy-seat; but amid royal halls, in the palaces of magicians, and islands of enchantment. Instead of the serpent, with hairy mane, and eye of carbuncle, gliding among the myrtle thickets of Eden, we should have jousts and tournaments, the streaming of gonfalons, the glitter of dancing plumes, the wailing of barbaric trumpets, and the sound of silver clarions: battles fiercer than that of Fontarabia, and fields more gorgeous than that of the Cloth of Gold. What crowds of pilgrims and of palmers should we not have beheld journeying to and fro with shell and staff of ivory, filling the port of Joppa with their galleys? What youthful warriors, the flowers of British chivalry, should we not have seen caparisoned, and in quest of the holy Sangreal? The world of reality and the world of vision would have been equally exhausted to supply the materials. The odours would have been wafted from the 'weeping woods' of Araby; the dazzling mirrors would have been of solid diamond; and the flowers would have been anaranths, from the land of faëry. Every warrior would have been clothed in pyropus and in adamant. We should have watched in battle, not the celestial sword of Michael, but the enchanted Caliburn; we should have had, not the sorrows of Eve, and the fall of Adam, but the loves of Angelica, or the exploits of Arthur."

Waverley Novels, Vol. XXXI. Quentin Durward, Vol. I. Edinburgh, 1831, Cadell; London, Whittaker and Co.

THIS popular portion of Sir Walter's romances is ushered in by a very pleasant introduc-

tion, with less of anecdote than some of its predecessors, but containing some most admirable remarks on the decline of chivalry, and a no less admirable summary of the character of Louis XI. and its influence. We quote two of the notes. Cards, it is said, were invented for the amusement of Charles V.

"The alleged origin of the invention of cards, produced one of the shrewdest replies I have ever heard given in evidence. It was made by the late Dr. Gregory, of Edinburgh, to a counsel of great eminence at the Scottish bar. The doctor's testimony went to prove the insanity of the party whose mental capacity was the point at issue. On a cross-interrogation, he admitted that the person in question played admirably at whist. 'And do you seriously say, doctor,' said the learned counsel, 'that a person having a superior capacity for a game so difficult, and which requires, in a pre-eminent degree, memory, judgment, and combination, can be at the same time deranged in his understanding?' 'I am no card-player,' said the doctor, with great address, 'but I have read in history that cards were invented for the amusement of an insane king.' The consequences of this reply were decisive."

Speaking of the gipsies—

"Their first appearance in Europe took place in the beginning of the fifteenth century, when various bands of this singular people appeared in the different countries of Europe. They claimed an Egyptian descent, and their features attested that they were of Eastern origin. The account given by these singular people was, that it was appointed to them, as a penance, to travel for a certain number of years. This apology was probably selected as being most congenial to the superstitions of the countries which they visited. Their appearance, however, and manners, strongly contradicted the allegation that they travelled from any religious motive. Their dress and accoutrements were at once showy and squalid; those who acted as captains and leaders of any horde, and such always appeared as their commanders, were arrayed in dresses of the most showy colours, such as scarlet or light green; were well mounted; assumed the title of dukes and counts, and affected considerable consequence. The rest of the tribe were most miserable in their diet and apparel, fed without hesitation on animals which had died of disease, and were clad in filthy and scanty rags, which hardly sufficed for the ordinary purposes of common decency. Their complexion was positively Eastern, approaching to that of the Hindoos. Their manners were as depraved as their appearance was poor and beggarly. The men were in general thieves, and the women of the most abandoned character. The few arts which they studied with success were of a slight and idle, though ingenious description. They practised working in iron, but never upon any great scale. Many were good sportsmen, good musicians, and masters, in a word, of all those trivial arts, the practice of which is little better than mere idleness. But their ingenuity never ascended into industry. Two or three other peculiarities seem to have distinguished them in all countries. Their pretensions to read fortunes, by palmistry and by astrology, acquired them sometimes respect, but oftener drew them under suspicion as sorcerers; and lastly, the universal accusation that they augmented their horde by stealing children, subjected them to doubt and execration. From this it happened, that the pretension set up by these wanderers, of being

pilgrims in the act of penance, although it was at first admitted, and in many instances obtained them protection from the governments of the countries through which they travelled, was afterwards totally disbelieved, and they were considered as incorrigible rogues and vagrants; they incurred almost every where sentence of banishment, and, where suffered to remain, were rather objects of persecution than of protection from the law. There is a curious and accurate account of their arrival in France, in the Journal of a Doctor of Theology, which is preserved and published by the learned Pasquier. The following is an extract:—"On August 27th, 1427, came to Paris twelve penitents, *penanciers*, (penance doers,) as they called themselves, viz. a duke, an earl, and ten men, all on horseback, and calling themselves good Christians. They were of Lower Egypt, and gave out that, not long before, the Christians had subdued their country, and obliged them to embrace Christianity on pain of being put to death. Those who were baptized were great lords in their own country, and had a king and queen there. Soon after their conversion, the Saracens overran the country, and obliged them to renounce Christianity. When the Emperor of Germany, the King of Poland, and other Christian princes, heard of this, they fell upon them, and obliged the whole of them, both great and small, to quit the country, and go to the pope at Rome, who enjoined them seven years' penance to wander over the world, without lying in a bed. They had been wandering five years when they came to Paris first; the principal people, and soon after the commonalty, about 100 or 120, reduced (according to their own account) from 1000 to 200, when they went from home, the rest being dead, with their king and queen. They were lodged by the police at some distance from the city, at Chapel St. Denis. Nearly all of them had their ears bored, and wore two silver rings in each, which they said were esteemed ornaments in their country. The men were black, their hair curled; the women remarkably black, their only clothes a large old duffle garment, tied over the shoulders with a cloth or cord, and under it a miserable rocket. In short, they were the most poor miserable creatures that had ever been seen in France; and, notwithstanding their poverty, there were among them women who, by looking into people's hands, told their fortunes, and what was worse, they picked people's pockets of their money, and got it into their own, by telling these things through airy magic, &c. &c. &c. Notwithstanding the ingenious account of themselves rendered by these gipsies, the Bishop of Paris ordered a friar, called Le Petit Jacobin, to preach a sermon, excommunicating all the men and women who had had recourse to these Bohemians on the subject of the future, and shewn their hands for that purpose. They departed from Paris for Pontoise in the month of September. Pasquier remarks upon this singular journal, that however the story of a penance savours of a trick, these people wandered up and down France, under the eye, and with the knowledge, of the magistrates, for more than a hundred years; and it was not till 1561, that a sentence of banishment was passed against them in that kingdom. The arrival of the Egyptians (as these singular people were called) in various parts of Europe, corresponds with the period in which Timur or Tamerlane invaded Hindostan, affording its natives the choice between the Koran and death. There can be little doubt that these wanderers consisted originally of the

Hindustanee tribes, who, displaced, and flying from the sabres of the Mahomedans, undertook this species of wandering life, without well knowing whither they were going. It is natural to suppose the band, as it now exists, is much mingled with Europeans, but most of these have been brought up from childhood among them, and learned all their practices. It is a strong evidence of this, that when they are in closest contact with the ordinary peasants around them, they still keep their language a mystery. There is little doubt, however, that it is a dialect of the Hindustanee, from the specimens produced by Grellman, Hoyland, and others, who have written on the subject. But the author has, besides their authority, personal occasion to know, that an individual, out of mere curiosity, and availing himself with patience and assiduity of such opportunities as offered, has made himself capable of conversing with any gipsy whom he meets; or can, like the royal Hal, drink with any tinker in his own language. The astonishment excited among these vagrants on finding a stranger participant of their mystery, occasions very ludicrous scenes. It is to be hoped this gentleman will publish the knowledge he possesses on so singular a topic. There are prudential reasons for postponing this disclosure at present; for although much more reconciled to society since they have been less the objects of legal persecution, the gipsies are still a ferocious and vindictive people. But notwithstanding this is certainly the case, I cannot but add, from my own observation of nearly fifty years, that the manners of these vagrant tribes are much ameliorated;—that I have known individuals amongst them who have united themselves to civilised society, and maintain respectable characters;—and that great alteration has been wrought in their cleanliness and general mode of life."

A very spirited group, Durward's meeting with the king, by Bonington, is the frontispiece. The vignette is pretty; but the attitude of Jacqueline has somewhat both of affectation and constraint.

Newton Forster; or, the Merchant Service.

By the Author of the "King's Own." 3 vols. 12mo. London, 1832. Colburn and Bentley.

WE know few writers of the present day who have more reality in their sketching than Captain Marryatt—both vigorous and original, he gives at once life and interest to his scenes; few writers, either, have made greater improvement since their first appearance than he has; and we do not hesitate to give the preference to *Newton Forster*, in comparison with any of his works. Perhaps the opening of the *King's Own*, with its terrible appeal to the deepest sympathy of our nature, is Captain Marryatt's finest effort; but as a whole, we think, both for variety and sustained interest, *Newton Forster* must have the preference.

It came to us so late in the week that we can only give one illustrative extract. The hero has, by the malignity of the commander of a trading brig, been left on board in a sinking vessel.

"We must now relate what had occurred on deck during the struggle of Newton to escape from his prison. At one o'clock, Jackson had calculated that in an hour, or less, the brig would strike on the reef. He took the helm from the man who was steering, and told him that he might go below. Previous to this, he had been silently occupied in coiling the hawser before the door of Newton's cabin, it being his intention to desert the brig, with the seamen, in the long-boat, and leave Newton to perish.

When the brig dashed upon the reef, which she did with great violence, and the crew hurried upon deck, Jackson, who was calm, immediately proceeded to give the orders which he had already arranged in his mind; and the coolness with which they were given quieted the alarm of the seamen, and allowed them time to recall their scattered senses. This, however, proved unfortunate for Jackson. Had they all hurried in the boat at once, and shoved off, he would in all probability have been permitted to go with them, and Newton, in the hurry of their self-preservation, would have been forgotten; but his cool behaviour restored their confidence, and, unhappily for him, gave the seamen time to reflect. Every one was in the boat; for Jackson had quietly prepared and put into her what he considered requisite, when one of the men called out for Newton. 'D—n Newton now!—save your own lives, my lads. Quick in the boat, all of you.' 'Not without Mr. Newton!' cried the men, unanimously. 'Jump down, Tom Williams, and see where he is; he must sleep devilish sound.' The sailor sprang down the companion hatch, where he found the hawser coiled against the door, and heard Newton struggling inside. It was enough. He hastened on deck and told his companions; adding, that 'it would take half an hour to get the poor fellow out, and that's longer than we dare stay, for in ten minutes the brig will be to pieces.' 'It is you, you murdering rascal, who did it!' cried the man to Jackson. 'I'll tell you what, my lads, if poor Mr. Newton is to die, let this scoundrel keep him company.' A general shout proclaimed the acquiescence of the other seamen in this act of retributive justice. Jackson, with a loud oath, attempted to spring into the boat, but was repelled by the seamen: again he made the attempt with dreadful imprecations. He was on the plane-sheer of the brig, and about to make a spring, when a blow from a handspike (the same handspike with which he had murdered the unfortunate seaman) struck him senseless, and he fell back into the lee-scuppers. The boat then shoved off, and had not gained more than two cables' lengths from the vessel, when Newton effected his escape and ran on deck. The brig had now beat up so high on the reef, that she remained firmly fixed upon it; and the tide having ebbed considerably, she was less exposed to the beating of the waves. The sun was also about to make his appearance, and it was broad daylight when Jackson first came to his recollection. His brain whirled, his ideas were confused, and he had but a faint reminiscence of what had occurred. He felt that the water washed his feet, and with a sort of instinct he rose and staggered up to windward. In so doing, without perceiving him, he stumbled over the body of Newton, who also was roused up by the shock. A few moments passed before either could regain his scattered senses; and, at the same time, both sitting up on the deck, at about a yard distant, they discovered and recognised each other. Newton was the more collected of the two, for Jackson's insensibility had been occasioned by bodily—his by mental concussion. The effect of the blow was still felt by Jackson; and although recovered from the stupor, a dull, heavy sensation affected his eyesight, and confused his ideas. The sight of Newton went far to recover Jackson, who started up as if to grapple with the object of his hatred. Newton was on his legs at the same moment, and retreating, seized upon the handspike which lay on the deck, close to where Jackson had been struck

down, and placed himself in an attitude of defence. Not a word was exchanged between them. They remained a few seconds in this position, when Jackson, whose brain was again affected by the violence of his feelings, dropped down upon the deck in a renewed state of insensibility. Newton had now time to look about him, and the prospect was any thing but cheering. It was almost low water, and in every direction he perceived reefs of coral rock, and large banks of sand, with deep channels between them, through which the tide flowed rapidly. The reef upon which the brig had been grounded was of sharp coral; and, in the deeper parts, the trees could be discerned, extending a submarine forest of boughs; but it was evident: that the reef upon which the vessel lay was, as well as most of the others, covered at high water. As a means of escape, a small boat was still hanging over the stern, which Newton was able to manage either with her sails or her oars, as might be required. As there was no time to be lost, and the only chance of escape remained with the boat, Newton commenced his arrangements. The masts and sails were found, and the latter bent;—a keg was filled with water, a compass taken out of the binnacle, a few pieces of beef, and some bread collected in a bag, and thrown in. He also procured some bottles of wine and cider from the cabin: these he stowed away carefully in the little locker, which was fitted under the stern-sheets of the boat. In an hour every thing was ready; and, throwing into her some pieces of spare rope, and a small grapple to anchor with, there being still sufficient water alongside to float her, Newton gradually lowered one tackle and then another, until the boat was safe in the water. He then hauled her up alongside, made her fast by the painter, and stepped her mast. All was now ready;—but to leave Jackson to be washed away by the returning tide, when the brig would unquestionably go to pieces?—Newton could not do it. True, he had sought his life, and still displayed the most inveterate rancour towards him; and Newton felt convinced that so future opportunity would occur that his enemy would not profit by to insure his destruction. Yet, to leave him—a murderer!—with all his sins upon his soul, to be launched so unprepared into the presence of an offended Creator!—It was impossible—it was contrary to his nature and to the religion which he professed. How could he hope for the Divine assistance in his perilous undertaking, when he embarked on it, regardless of the precept to forgive his enemy? Newton ascended to that part of the deck where Jackson laid, and roused him. Jackson awoke as from a deep sleep, and then stared at Newton, who, as a precaution, held the handspike in his hand. 'Mr. Jackson,' said Newton, 'I have roused you to let you know that the boat is now ready, and that I am going to shove off.' Jackson, who recollected the scene of the previous night, and perceived Newton standing over him with the handspike, appeared wholly unnerved. In point of muscular power, Newton was his superior, independent of the weapon in his possession. 'Not without me! not without me!' cried Jackson, raising himself on his knees. 'For mercy's sake, Mr. Newton, do not leave me to this horrid death!' 'You would have left me to one even more dreadful,' replied Newton. 'I beg your pardon!—Pardon me, Mr. Newton, I was drunk at the time—indeed I was. I don't know what I do when I'm in liquor. Don't leave me! I'll obey your orders, and do any thing you wish! I'll wait upon you as your servant!—I will indeed, Mr. Newton!'

'I neither ask that you will obey my orders, nor wait upon me,' replied Newton. 'All I request is, that you will lay aside your wanton animosity, and exert yourself to save your life. For what you have already attempted against me, may God forgive you, as I do! For what you may hereafter attempt, you will find me prepared. Now follow me into the boat.' Without farther exchange of words, Newton, followed by Jackson, went into the boat and shoved off. The weather was moderate and the wind light. There were two islets which Newton had marked, which apparently were not covered at high water, one about ten miles distant, in the supposed direction of the land, for Newton had shrewdly guessed the locality of the reef; and the other about two miles from the first, farther out, with trees growing to the water's edge. To this latter Newton proposed pulling, and waiting there until the next morning. When they were both in the boat, Newton, finding that the wind was contrary, unshipped the mast, and taking the foremost oar, that Jackson might not sit behind him, desired him to take the other. The tide, which was now flood, and swept out to the southward, obliged them to pull at an angle to reach their intended destination. It was not until sunset that, with great exertion, they fetched the island nearest to the land, not the one that was covered with trees, as they had intended. As soon as the boat was secured, exhausted with fatigue they both threw themselves down on the sand, where they remained for some time. Having recovered a little, Newton procured from the boat some of the supplies which they required, and after satisfying their hunger in silence, they both lay down to repose. Newton, who was still afraid of Jackson's diabolical enmity, which his silence implied to be again at work, closed his eyes, and pretended for some time to be asleep. As soon as it was dark he rose, and first listening to the breathing of his comrade, who appeared to be in a sound slumber, he walked away from him about one hundred yards, so that it would be difficult to find him; he placed the handspike under his head for a pillow, and, worn out with mental and bodily fatigue, was soon in a state of oblivion. His sleep, although profound for three or four hours, was subsequently restless. The mind, when agitated, watches for the body, and wakes it at the time it should be on the alert. Newton woke up: it was not yet daylight, and all was hushed. He turned round, intending to get up immediately; yet, yielding to the impulse of wearied nature, he again slumbered. Once he thought that he heard a footstep, roused himself, and listened; but all was quiet and still, except the light wave rippling on the sand. Again he was roused by a sort of grating noise; he listened, and all was quiet. A third time he was roused by a sound like the flapping of a sail: he listened—he was sure of it, and he sprang upon his feet. It was dawn of day, and as he turned his eyes towards the beach, he perceived to his horror that the boat was indeed under sail, Jackson, who was in it, then just hauling aft the main-sheet, and steering away from the island. Newton ran to the beach, plunged into the sea, and attempted to regain the boat; but he was soon out of his depth, and the boat running away fast through the water. He shouted to Jackson, as a last attempt. The scoundrel waved his hand in ironical adieu, and continued his course. 'Treacherous villain!' mentally exclaimed Newton, as his eyes followed the boat: 'was it for this that I preserved your life in return for your attempts on mine? Here, then, must

I die of starvation!—God's will be done!' exclaimed he aloud, as he sat down on the beach, and covered his face with his hands."

In conclusion, we have only to remark, that Captain Marryatt's real-life scenes are very forcible; that they display much good feeling, though (even still) somewhat wanting in good taste; and that his chief fault is in his pseudo humour, which too often runs into extravagance, or degenerates into coarseness: but take him all in all, with his faults and his merits, he is one of the most original, striking, and powerful authors of the day.

Memoirs of the Duchess d'Abrantes.

(Second Notice.)

FERTILE as the last ten years have been in memoir-writers, the product of the last century is yet unexhausted. The truth is, it is scarcely possible to exhaust the records of a period so abounding with great men, so crowded with extraordinary events. To compile a history of Napoleon would require talents almost equal to his own; but, in the meantime, every possible material is being supplied, and every facility is being afforded, for trying truth by that best test,—comparison. Written with all the liveliness of a clever woman, and with all the advantages of near observation, these memoirs of the Duchess d'Abrantes combine great interest and entertainment. She has evidently her prejudices, and we doubt her being always an irrefragable authority; not so much, we readily admit, from intentional falsehood, as from that self-deception to which all are more or less liable. One prominent error the authors, like the narrators, of events generally commit,—they pre-suppose motives, and then deduce their consequences, and forget how much an action is changed by the colour given it by ourselves. Madame Junot had unusual opportunities for studying Napoleon: her mother was the intimate friend of his mother; as a young man, he was continually at their house; and she afterwards was wife to one of his favourite generals. We doubt, however, very much whether the envy attendant on such a position did not marvellously obscure the judgment: none of Napoleon's earlier friends seem ever to have forgiven his success. The opening scenes in the future emperor's life are of extreme interest: we quote one or two instances.

"I believe," said Albert one day to my mother, 'that the poor young man feels keenly his dependent situation.' 'But,' exclaimed my mother, 'his situation is not dependent; and I trust you have not made him feel that he is not quite at home while he stays here.' 'Albert is not wrong in this matter,' said my father, who happened to be present. 'Napoleon suffers on account of his pride; but it is a pride not to be censured. He knows you; he knows, too, that your family and his are in Corsica equal with regard to fortune. He is the son of Letitia Bonaparte, and Albert is yours—I believe that you are even related; now he cannot easily reconcile all this with the immense difference in the education he receives as a *bourrier* in the military school, separated from his family, and deprived of those attentions which he sees lavishly bestowed upon our children.' 'But you are describing envy, not pride,' replied my mother. 'No, there is a great difference between envy and the feelings by which this young man is disturbed; and I fancy I know the human heart well enough to understand the workings of his. He suffers, and perhaps more keenly in our

house than elsewhere. You are warm-hearted, but you cannot comprehend how misplaced kindness may sometimes fail to effect a cure. When you wished to make use of the credit of M. de Falgueyretes to obtain leave of absence for Napoleon for more than a day or two, I told you you were doing wrong. You would not listen to me. The warmth of your friendship for the mother has caused you to place the son in a continually painful situation; for painful it must be, since the reflection will recur to him: 'Why is not my family situated like this?' 'Absurd!' cried my mother: 'to reason thus would be both foolish and wicked in him.' 'He would be neither more foolish nor wicked than the rest of the world. It is but feeling like a man. What is the reason he has been in a constant state of ill humour since his arrival here? Why does he so loudly declaim against the *indecent luxury* (to use his own words) of all his comrades? Why? but because he is every moment making a comparison between their situation and his own! He thinks it ridiculous that these young men should keep servants when he has none. He finds fault with two courses at dinner, because when they have their *pic-nics* he is unable to contribute his share. The other day I was told by Durmaray, the father of one of his comrades, that it was in agitation to give one of the masters a *déjeûné*, and that each scholar would be expected to contribute a sum, certainly too large for such boys. Napoleon's reprehension is so far just. Well! I saw him this morning, and found him more than usually gloomy. I guessed the reason, and broke the ice at once by offering him the small sum he wanted for the occasion. He coloured deeply, but presently his countenance resumed its usual pale yellow hue. He refused my offer.' 'That was because you did not make it with sufficient delicacy,' cried my mother: 'you men are always such bunglers.' 'When I saw the young man so unhappy,' continued my father, without being disconcerted by my mother's warmth of manner, to which he was accustomed, 'I invented an untruth, which Heaven will doubtless pardon. I told him that before his father expired in our arms at Montpellier, he gave me a small sum, to be applied to the wants of his son in cases of emergency. Napoleon looked at me steadfastly, with so scrutinising a gaze that he almost intimidated me. 'Since this money comes from my father, sir,' said he, 'I accept it; but had it been a loan, I could not have received it. My mother has already too many burdens, and I must not increase them by expenses beyond my means, particularly when they are imposed upon me by the stupid folly of my comrades.'"

The influence of that prejudice which seems to run through these memoirs is strongly marked here: no allowance is made for the pride of a high spirit shrinking from obligation; no suspicion entertained that "l'imamable Albert," who, as we are afterwards informed, "painted like Vernet, whose pupil he was—who played on the harp much better than Krumpholtz, his master—and who made verses like an angel," might, nevertheless, not be the most suitable companion to a mind like Buonaparte's, who would value energies more than accomplishments;—and, what strikes us still more, not the slightest appreciation of the good and high feeling which shunned an encroachment on his mother's necessities.

Marianne Buonaparte at Saint-Cyr.

"One day my mother and some other members of my family went on a visit to Saint-Cyr, and Bonaparte accompanied them. Marianne

came into the parlour very melancholy, and at the first word that was addressed to her she burst into tears. My mother embraced her, and endeavoured to console her. It was some time before Marianne would tell the cause of her distress. At length my mother learned that one of the young ladies (Mademoiselle de Montluc) was to leave the school in a week, and that the pupils of her class intended giving her a little entertainment on her departure. Every one had contributed, but Marianne could not give any thing because her allowance of money was nearly exhausted—she had only six francs remaining. ‘If I give the six francs,’ said she, ‘I shall have nothing left, and I shall not receive my allowance for six weeks to come: besides, six francs are not enough.’ Napoleon’s first movement, as my mother told me when she related this anecdote, was to put his hand into his pocket. However, a moment’s reflection assured him that he should find nothing there; and he checked himself, coloured slightly, and stamped his foot. My mother could not refrain from laughing when she thought of the singular resemblance between the luncheon of Saint-Cyr and the breakfast of the military school at Paris; and she mentioned this in Greek to my uncle. The coincidence was easily explained; both the brother and sister were *boursiers* (free pupils) in the schools, at which there were, at the same time, the children of many noble and wealthy families. Now, the Bonaparte family were poor; this fact was openly acknowledged by M. Bonaparte, the father, when he wrote to the minister of war for the purpose of getting Lucien placed at Brienne. A great deal of discussion has been started on the question of the wealth or poverty of the Bonaparte family. The reproaches which have been founded on their supposed poverty are too contemptible for notice; and in my opinion it matters little what were the pecuniary circumstances of the family before they entered upon that career of greatness which the genius and fortune of Napoleon opened to them. But we will return to Marianne. My mother asked her what money she wanted; the sum was small,—ten or twelve francs. My mother gave her the money, and her distress was ended. When they got into the carriage, Napoleon, who had restrained his feelings in the presence of his sister, vented violent invectives against the detestable system of such establishments as the Saint-Cyr and the military schools. It was evident that he deeply felt the humiliation of his sister. My uncle, who was of a hasty temper, soon got out of patience at the bitterness with which he expressed himself, and made some observations which were not very agreeable to him. Napoleon was silent immediately; for at that time young people were educated in the observance of great respect to those who were older than themselves; but his heart was full: he soon brought back the conversation to the same subject; and at length his language became so violent, that my uncle exclaimed, ‘Silence! it ill becomes you, who are educated by the king’s bounty, to speak as you do.’ I have often heard my mother say that she thought Napoleon would have been stifled with rage. He was pale and red in the space of a moment. ‘I am not educated at the king’s expense,’ said he; ‘but at the expense of the state.’ ‘A fine distinction, truly!’ returned my uncle. ‘Is not the king the state? I will not suffer you to speak thus disrespectfully of your benefactor in my presence.’ ‘I will say nothing that may be displeasing to you, sir,’ replied the young man; ‘only give me leave to add, that if I were the

sovereign, and had power to alter these regulations, I would change them, so that they should be for the advantage of all.’”

We proceed to a noble act of his. Through the intrigues of Salicetti, he had been arrested, and his name struck off the list of generals: how he felt this, one single phrase of his own will best express.

“Bonaparte had in general a bad delivery; I mean to say, he was not eloquent in his manner of expressing himself. His concise style took from his language that air of courtesy, or, at least, of elegance, which is indispensable to the most ordinary conversation. The fact is, he was only eloquent at moments when his heart expanded: then it was, as the fairy legends say, that pearls and rubies dropped from his mouth. The present was one of those occasions; and the unfortunate men who had just suffered, found in Bonaparte an admirable panegyrist. Far different was his language towards Salicetti, Fréron, and all those, who, he said, wanted to renew the reign of terror. The mention of these names led him to speak of himself, and of his blighted hopes, and his misfortunes. ‘Yet I am only twenty-six years old,’ exclaimed he, striking his forehead—‘only twenty-six.’”

Salicetti is, in his turn, denounced. Madame de Permon gives him an asylum in her house, which, however, she denies when warned of the danger by Bonaparte, who seems convinced. They escape from Paris; and at the first stage the following letter is placed in Madame de Permon’s hands.

“‘I never like to be thought a dupe. I should seem to be one in your eyes, if I did not tell you that I knew of Salicetti’s place of concealment more than twenty days ago. You may recollect, Madame Permon, what I said to you on the first Prairial. I was almost morally certain of the fact; now I know it positively. You see, then, Salicetti, that I might have returned the ill you did to me. In so doing, I should only have avenged myself; but you injured me, when I had never offended you. Which of us stands in the preferable point of view at this moment? I might have taken my revenge; but I did not. Perhaps you will say that your benefactress was your safeguard. That consideration, I confess, was powerful. But alone, unarmed, and an outlaw, your life would have been sacred to me. Go, seek in peace an asylum where you may learn to cherish better sentiments for your country. On your name my mouth is closed. Repent, and appreciate my motives. Madame Permon, my best wishes are with you and your child. You are feeble and defenceless beings. May Providence and a friend’s prayers protect you! Be cautious, and do not stay in the large towns through which you may have to pass. Adieu!’”

Napoleon’s contempt for the race of exquisites, or, as they were then called, “incroyables,” is continually expressed.

“He had just then received a letter from his mother, in which she observed, that the reaction would probably deluge the south of France in blood. ‘It is those royalist *muscadins*,’ said Napoleon, ‘who are making all this uproar. They would be very glad to glean after the battle of the patriots. What fools there are in that Convention! They are all worthless Frenchmen.’ The young men to whom Bonaparte alluded wore grey great-coats with black collars and green cravats. Their hair, instead of being à la Titus, which was the prevailing fashion of the day, was powdered, plaited, and turned up with a comb, while on each side of the face hung two long curls called dogs’-ears

(*oreilles de chien*). As these young men were very frequently attacked, they carried about with them large sticks, which were not always merely weapons of defence; for the frays which arose in Paris at that time were often provoked by them.”

Again:

“On Bonaparte’s return to Paris, after the misfortunes of which he accused Salicetti of being the cause, he was in very destitute circumstances. His family, who were banished from Corsica, found an asylum at Marseilles; and they could not now do for him what they would have done had they been in the country whence they derived their pecuniary resources. From time to time he received remittances of money, and I suspect they came from his excellent brother Joseph, who had then recently married Mademoiselle Clary; but with all his economy, these supplies were insufficient. Bonaparte was, therefore, in absolute distress. Junot often used to speak of the six months they passed together in Paris at this time. When they took an evening stroll on the Boulevard, which used to be the resort of young men mounted on fine horses, and displaying all the luxury which they were permitted to shew at that time, Bonaparte would declaim against fate, and express his contempt for the dandies with their whiskers and their *oreilles de chien*, who, as they rode past, were eulogising in ecstasy the manner in which Madame Scio sang *Paole pafumée, paole panachée*. ‘And it is on such beings as these,’ he would say, ‘that Fortune confers her favours: Grand Dieu! how contemptible is human nature!’”

[To be continued.]

A Familiar Compendium of the Law of Husband and Wife, in Two Parts; to which is added, a Third Part, comprising the Laws relating to Breach of Promise of Marriage, Seduction, and Abduction. By a Solicitor. 8vo. pp. 240. London, 1831. Whittaker and Co.

WE were rather unlucky in our first opening of this volume: expecting to find a grave dissertation on the topics mentioned in the title-page, we stumbled on the following paragraph apropos of the cause “*Foot v. Hayne*.”

“The excitement on this occasion was chiefly amongst the more respectable classes of society; and early in the morning a crowd began to assemble on the outside of the court. On the opening of the court the rush was tremendous, and the tumult such, that the Lord Chief Justice directed, that if order could not be maintained, a requisition for assistance should be despatched to the Secretary of State’s Office. There were present two noblemen and several other persons of rank.”

In the next case cited at length—“*Rex v. Wakefield and others*”—after saying, “the two younger Wakefields were fashionably dressed,” which, we presume, lays down some useful axiom of law—we are then informed, that “Miss Turner was called into the box, and her appearance excited a great sensation in court. She was a pretty, genteel girl; and though she appeared to labour under considerable apprehension at first, she recovered her self-possession, and gave her evidence in a mild, but firm and collected manner, and with the greatest clearness. Mr. Wakefield sat directly opposite to her; but she kept her eyes fixed upon the jury-box, and scarcely moved them during the whole of her examination.”

* “This affected mode of dropping the *r* was common among the dandies of that time, or as they used to be called the *incroyables*.”

We have not been accustomed to these enlivening details in the usual course of reading legal reports; and however much they may please the generality of trial-readers, as such trials are found reported in the newspapers, we must take the liberty to doubt their necessity or usefulness in a work professedly of legal instruction. The fact is, the whole book is of flimsy construction, giving little information to the legal student beyond the common-places of its subject: and the third division is even of slighter materials than the first two parts—the trials noticed above forming its chief contents. The investigation requires deeper thought, more intense study, and more attentive labour, than our solicitor has bestowed upon it.

The Legal Examiner. 1831. Maxwell.

A NEW periodical, under the above title, has made its appearance, to enlighten the rising lawyers of the present day. We have looked over the first three numbers, which contain no very deep learning or black-letter knowledge; but their contents are of that description which students will do well to acquire and retain. The reports of cases seem to go very little beyond the newspapers—nor (as such publications are now conducted) is this perhaps necessary in a work like the present; but the title promises something beyond this. The great objection in our minds to these brochures is, the desultory style of reading with which they imbue the students, who find no one subject on which to fix their attention, but pass too quickly

“From grave to gay, from lively to severe.”

The law requires in its votaries a deeper attention, and closer study, than these kinds of works afford; yet we must ever bestow some praise on any book which endeavours to make an abstruse science more pleasing and more facile to those who pursue it. Of such, is the *Legal Examiner*.

May You like It. By Charles B. Tayler, M.A., author of “Is this Religion?” and “A Fireside Book.” Fifth Edition, corrected. 2 vols. London, 1832. Tilt.

It is now some years since we first gave that cordial praise which these charming little volumes so well deserved. Full of the poetry of feeling, keenly alive to the beautiful in nature and life, imbued with the deep and true spirit of religion—*May You like It* amply merited the success its simple and touching pages have obtained. The present new edition, neatly printed and prettily bound, will be a delightful Christmas present to our young friends.

A Popular Description of the Indigenous Plants of Lanarkshire, &c. By the Rev. W. Patrick. Edinburgh, 1831. D. Lizars.

THE aspect of the county of Lanark is varied and beautiful. A succession of forest, moorland, and mountain scenery, it comprises part of the basin of the majestic Clyde with its waterfalls and wooded dells, moors and heaths with coal and iron works, extensive sheets of water crowded with fish and wild-fowl, and desolate ranges of mountains long remarkable for their mineral treasures. A Flora of such a county is among the most interesting, from its variety and from its characteristic peculiarities. Our author has premised with some useful details on geological structure; and we are happy to see that he embraces the conception of the age of the older rocks, which has been obtained from a careful study of the metalliferous deposits of Leadhills and Wanlockhead. There

is much wanting to make this sketch perfect. The relative age of the sandstone has not yet been pointed out; we are ignorant of the date of elevation of the plutonic rocks; and there are unnoticed diluvial formations, which, in some cases, lie over the peat, and which are of considerable importance. This Flora does not include the cryptogamous plants; and the whole amount of species is 604, of which 146 are monocotyledons, and 783 dicotyledons. The most striking feature in the vegetation of Lanarkshire is in the moors and peat-bogs. It was in this county that we first studied the nature of these extensive formations in northern climates, and the results of our researches will not be found irrelevant to the subject. The plants which prevailed most on the dry steep land, and where the moss is merely a thin incrustation, were the *Erica tetralix* and *cinerea*, *Calluna vulgaris*, white fogs, yellow dry fogs (*Hypnum squarrosus*, *filicium*, and *rutabulum*), fox-foot, white bent, gouk bear (*Polytrichum commune*), with some few grasses of a stunted growth. The plants that abound on bent moss are stool bent, white bent, club rush, sage grasses (*Carices*), blue mountain grass, tormental, with some of the coarse grasses in a dwarfish state. The principal plants that grow upon and contribute to the formation of flow moss are, marsh fog, gouk bear, drab-coloured fog, cotton heads (*Eriophorum polystachion*, *vaginatum*, and *angustifolium*). These plants are apparently introduced, and their growth supported, by a redundancy of moisture in a cold climate. The juices, consisting chiefly of tannin, acid extract, and bitter principle, (probably gallic and suberic acids), give to the vegetable structure the power of resisting decomposition after life has terminated; and hence the formation of great bogs. The principle by which they become partly soluble, tinging the waters of the moorlands, is something similar to the partial solubility given to coffee by roasting. There are some curious observations which we made on the mode of succession of these plants, so as to affect the gradual elevation of the bog; and there are also a number of vagabond plants, lending beauty to these desolate tracts, which we have not space to describe. It is impossible to overcome the prejudices of education by critical severity, or we would ask the author, if determined to persevere in the artificial arrangement in his little work, whether it would not have been advisable to have printed a list of the species in their natural order, as an accompaniment? Plants of the same families grow oftentimes in similar places, and a list of this kind is a picture of the vegetation of the district. Their geographical distribution would be more easily understood, and the terms of comparison contained in the numerical proportion of the different families would be at once obtained.

The Library of Entertaining Knowledge. Pompeii, Vol. I. pp. 323. London, C. Knight.

WE cannot too highly express our admiration of this little volume, which is a model of perfection in the class of works to which it belongs. The subject is most interesting, and twenty quartos might fail to treat it better, or give us a clearer idea of it, with all its classical allusions and connexion with elegant literature. Whoever the editor is, he has executed his task with great fidelity, displaying ample information and a well-cultivated mind. To complete the extraordinary merit of this production, four plates on steel, and no fewer than a hundred and thirty-nine clever and characteristic woodcuts, illustrate its delightful text.

The Cabal: a Tale of the Reign of William the Fourth. 2 vols. 12mo. London, 1831. J. Cochrane and Co.

To publish a novel in two volumes bespeaks moderation; and this is the great merit of the work before us. It is a political jumble, in which living characters are shewn up, but so mixed and confused in their traits, and in the events in which they are represented to figure, that it is impossible to individualise them, and the reader leaves off at the end, like the spectator of a phantasmagoria, where there is nothing real, and only shadowy resemblances.

Punch and Judy. Illustrated by George Cruikshank. London, Reid.

THE public may tire of patent theatres, of tragedies, of operas, of all other scenic entertainments; but who ever tired of Punch? No one: and so here he is, all alive, from Cruikshank, in a third edition!

ORIGINAL CORRESPONDENCE.

POLAND!!

THE following is literally and absolutely original.—Ed. L. G.

SIR—You will forgive a fond father who sends you the effusion of his child, only eight years old! To Poland! animating subject! There are faults, but consider the tender age of the youth. I send them as the not untalented boy wrote them though I must in fairness say, I have altered a line or two, perhaps a little for the better; but the child's age must be considered.

Line 12 stood originally—

“The name of Poland o'er the world shall fly.”

Line 14—

“Thy glorious name shall never, never fall.”

And, last, line 21—

“For a dread plague, the cholera morbus called.”

These are faults which an inexperienced youth can hardly fail to escape from. Who can be perfect at so young an age? Should you insert the enclosed in your earliest, you will find on in the bright career of glory an infant Campbell, who may ultimately reach the envied goal of poetic distinction, and, at the same time, gratify a fond father who has entirely educated him, AND MADE HIM WHAT HE IS. I am, sir,

Your admirer and old subscriber,
L. L. B.

P.S.—I point out what I consider the superior passages by dots, thus The be in line 10, I must own to be my correction—my son had written is.

O Poland! thou art not yet overthrown
By Russia vast (we may say overgrown)—
Russia, whose GRASPING ARMS almost extend
From Europe's INFANT POINT to Asia's end:
No, Poland! yet thy doom is not arrived,
Thy nation's glory has till now survived;
Well hast thou fought; and still fight on and bleed,

While all the world looks on the glorious deed.
Fight to the last, till every Pole be dead,
So shall thy fame more wide and far be spread;
And when the last of all the Poles shall die,
The name of Poland still shall live on high!
And though the Russians Poland Russia call,
Thy glorious name shall still survive o'er all.
Is Warsaw lost? still Poland lives, and burns
With glorious ardour, GREAT AND GRAND BY
TURKS!

So fight! while yet another Pole remains,
AND DIE, TO COVER RUSSIA O'ER WITH
STAINS.

The pitying gods are careful of your cause,
And seem to laud your efforts with applause;
For a dread plague (by mortals morbus called)
The Russian army long ago appalled,
And thinn'd their ranks, and mow'd them down
like grass—
(It now has got to Sunderland, alas!)

* As these dots cannot conveniently be expressed in types, we have put the passages thus distinguished in the MS. in capitals.

What then should stop your efforts to be free? Fight on, and so you're surely so to be. Look to the Greeks, and to the days of old—IN WHAT THEY DID, YOUR STORY NOW IS TOLD;

So now let Warsaw strenuously go on, AND SHE SHALL BE ANOTHER MARATHON.

ARTS AND SCIENCES.

LINNEAN SOCIETY.

MR. LAMBERT in the chair:—Mr. Brown's observations on the organs and mode of fecundation in *orchideae* and *asclepiadeae* were concluded. Linnaeus, with many other botanists, and also Mr. Brown himself, from the peculiarities in the structure and relative position of the organs, considered the direct contact of the pollen masses and stigma as improbable; but from a series of observations instituted last spring on this family, the learned author has been induced to abandon his former opinion, and has now satisfied himself that the direct application of the pollen masses to the stigma is necessary to fecundation. In the *asclepiadeae*, whose reproductive organs are analogous to those of *orchideae*, it would appear that the agency of insects is absolutely necessary to extract the pollen masses from the cases in which they are enclosed, before actual fecundation can take place.

At the meeting on Tuesday evening Mr. Lambert was again in the chair: A paper by John Blackwall, Esq. F.L.S. was read,—on the means by which certain animals ascend the vertical surfaces of highly-polished bodies. The writer here combatted the idea of a vacuum being formed by the feet of such animals, and seemed to consider the secretion of a glutinous matter from these organs as favouring their ascent of smooth surfaces. There was also read at the same sitting, the first portion of a paper by Mr. Ogilby, B.A., entitled, "General history and distribution of marsupial animals, with original descriptions of those species which inhabit the continent of Australia and its dependencies." To the interesting contents of this paper we shall hereafter return.

ZOOLOGICAL SOCIETY.

THE monthly meeting of this Society was held at Bruton Street on Thursday, Dec. 1; Mr. E. T. Bennet in the chair. There had been received during the last month at the museum 131. 9s.; at the garden 195s.; total 208l. 9s. Various presents had been received for the museum and the menagerie; among the principal of which were four young ostriches, and a wild sow and pigs, presented by his Majesty; and a pair of ichneumons and a pair of Barbary mice, from Drummond Hay, Esq. H. M. consul at Tangier. A satisfactory statement was made of the funds of the Society; and it was announced that no new buildings were undertaken. Mr. Cox moved for the appointment of a committee to suggest to the council on the horticultural embellishment of the gardens; which was agreed to, and a committee was afterwards appointed. Mr. Sergeant Andrews gave notice of a motion, "that a certain part of the funds of the Society be reserved to accumulate for the formation of a museum."

NEW PATENTS

Granted by his Majesty for Inventions.—Sealed, 1831.

To Joshua Bates, of Bishopsgate Street, in the city of London, gentleman, in consequence of a communication made to him by a certain foreigner residing abroad, for an invention of certain improvements in machinery or apparatus for roving, twisting, or spinning cotton, silk, wool, hemp, flax, or other fibrous substances. Sealed 27th October, for enrolment—6 months.

To Sarah Guppy, of Tarway House, Clifton, near Bristol, widow, for her having found out and invented a method of applying and arranging certain articles, parts or pieces of cabinet work, upholstery, and other articles commonly or frequently applied to bedsteads and hangings, and also others not hitherto so applied. 27th October—2 months.

James Macdonald, of the University Club House, Pall Mall East, in the county of Middlesex, gentleman, in consequence of a communication made to him by a foreigner residing abroad, for a certain improvement or improvements in the construction of bridges made of iron or other materials, which improvement or improvements are also applicable to the construction of piers, rail-roads, roofs, and other useful purposes. 31st October—6 months.

To George Minter, of Prince's Street, Soho, in the county of Middlesex, cabinet-maker and upholsterer, for his having invented a fastening for dining-tables and other purposes. 1st November—2 months.

To Thomas Brunton, of Park Square, Regent's Park, in the county of Middlesex, Esq. for his having found out or discovered a new application or adaptation of certain apparatus for heating fluids or liquids, and generating steam for various useful purposes. 15th November—6 months.

To Thomas Brunton, of Park Square, Regent's Park, in the county of Middlesex, Esq. and Thomas John Fuller, of the Commercial Road, Limehouse, in the county of Middlesex, civil engineer, for their having found out and invented an improvement or improvements on certain mechanical apparatus applicable to the raising of water, and other useful purposes. 15th November—6 months.

To Arthur Howe Holdsworth, of Dartmouth, in the county of Devon, for his having invented improvements in the construction of rudders, and in the application of the same to certain descriptions of ships or vessels. 19th November—6 months.

To David Selden, of Liverpool, in the county palatine of Lancaster, merchant, in consequence of a communication made to him by a certain foreigner residing abroad, for an invention of an improved carding and slubbing engine for wool and other fibrous substances. 22d November—6 months.

Newton and Berry.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, Oct. 10th.—The first day of Michaelmas Term, the following degrees were conferred:—

Masters of Arts.—Rev. C. Taylor, Brasenose College, Master of Hereford School; Rev. R. Smith, St. John's College; Rev. J. Slade, St. Alban Hall.

Bachelor of Arts.—G. E. C. Walker, Merton College.

Oct. 20th.—The following degrees were conferred:—

Masters of Arts.—Rev. G. Phillimore, Student, Christ Church; Rev. W. F. Walker, Magdalen Hall.

Bachelors of Arts.—Rev. C. Crawford, Magdalen Hall; E. A. Dayman, Fellow, T. L. Tovey, Exeter College.

Oct. 27th.—The following degrees were conferred:—

Doctor in Divinity.—S. Hinds, Queen's College.

Bachelor in Civil Law.—J. R. Kenyon, Fellow, All Souls' College.

Masters of Arts.—T. C. Parr, Grand Compounder, G. Laire, C. R. Littledale, Student, Christ Church; Rev. E. Grimmer, Magdalen Hall; Rev. W. Harding, University College; Rev. J. Hughes, Rev. J. Phelps, Scholar, Jesus College.

Bachelor of Arts.—C. W. Orde, Grand Compounder, University College.

Nov. 3d.—The following degrees were conferred:—

Masters of Arts.—Rev. G. F. Cooper, Wadham College; Rev. J. C. Aldrich, Lincoln College; Rev. C. J. C. Bulle, Balliol College; Rev. J. Fry, St. Edmund Hall; H. Norris, W. Pemfether, S. Everard, Balliol College; A. A. Franklyn, Exeter College; Hon. W. H. Spencer, Christ Church.

Nov. 10th.—The following degrees were conferred:—

Bachelor in Civil Law.—W. B. Courtenay, late Fellow of All Souls' College, Grand Compounder.

Masters of Arts.—Rev. J. H. L. Gabbell, Christ Church; J. W. Wall, Fellow, New College; Rev. J. T. Bennet, J. Pearson, Balliol College.

Bachelors of Arts.—W. Sneyd, Christ Church, Hon. S. Herbert, Oriel College, Grand Compounders; Hon. G. C. Talbot, C. H. Barham, Hon. E. H. Grimston, Christ Church; H. Hogarth, G. Murray, T. C. Vaughan, Magdalen Hall; T. W. S. Grazebrook, E. H. Dymocke, J. F. Lees, E. James, Brasenose College; J. Muckalt, H. Wells, Queen's College; J. Hext, W. Hocker, J. W. Scott, Exeter College; C. G. Prideaux, W. Mallock, J. E. E. Wilmot, Balliol College; G. Cox, W. Fortescue, Fellows, New College; J. C. Powell, Trinity College; E. Holcombe, J. Jones, Jesus College; H. Aldham, H. S. Dyer, Worcester College; E. Rolles, J. Kingdon, F. Thomas, Pembroke College; A. Buller, Oriel College; F. J. Ellis, Merton College.

Nov. 17th.—The following degrees were conferred:—

Masters of Arts.—E. Bagnal, Magdalen Hall; T. D. Brown, J. C. Chaytor, Worcester College.

Bachelors of Arts.—H. Bunbury, Grand Compounder, Oriel College; J. H. Dewhurst, Worcester College; J. S. Dolby, C. H. Barling, Lincoln College; J. Brooke, B. Lowther, Exeter College; W. Weyt, Queen's College.

Nov. 24th.—The following degrees were conferred:—

Masters of Arts.—Rev. C. Mackenzie, Pembroke College; Rev. H. J. B. Wither, Oriel College.

Bachelors of Arts.—I. G. Overton, E. O. Trevelyan, Corpus Christi College; J. T. Mott, R. R. Dean, Christ

Church; N. J. Merriman, Brasenose College; J. Syme, St. Alban Hall; W. Borlase, Queen's College; C. Webster, J. F. D. Morris, Exeter College; J. P. Paine, Worcester College; J. Flower, P. S. H. Payne, E. H. Grove, R. P. Turner, H. B. W. Churton, Balliol College; F. Jones, E. V. Neale, J. M. Chanter, Oriel College; J. B. Morgan, J. Osborne, Trinity College; J. Jones, Jesus College; J. Robertson, Pembroke College; E. Penny, A. P. Dunlap, Fellow, St. John's College.

Dec. 1st.—The following degrees were conferred:—

Masters of Arts.—C. Singsaunt, Grand Compounder, Brasenose College; Rev. T. Eades, Worcester College.

Bachelors of Arts.—Lord Osulston, Christ Church; Rev. J. L. Galton, Edmund Hall; F. Bangh, Exeter College; J. Llewellyn, Jesus College.

CAMBRIDGE, Oct. 10th.—The under-mentioned degrees were conferred:—

Masters of Arts.—G. W. Crawford, Fellow, King's College; H. L. Jones, Fellow, C. D. Ratcliffe, Magdalen College.

Bachelors of Arts.—W. E. Lord, S. J. Stowe, Trinity College; C. F. Childs, Emmanuel College; F. Skinner, Sidney College.

Oct. 26th.—The following degrees were conferred:—

Bachelor in Divinity.—Rev. E. Day, Sidney Sussex College, Compounder, Vicar of Billington, Yorkshire.

Masters of Arts.—Rev. C. J. Shaw, Trinity College; Rev. P. Gilpin, Christ's College; J. Gaitley, Sidney Sussex College.

Bachelors of Arts.—J. L. Figgins, G. Watts, Queen's College; J. C. Symons, Corpus Christi College; H. Mathew, Sidney Sussex College.

Nov. 5th.—The Seatonian Prize (for the best poem on "David playing the harp before Saul") has been awarded to the Rev. T. E. Hankinson, M.A. of Corpus Christi College; and the successful poem is, in the opinion of the examiners, of such merit as to entitle its author to receive 100l.

The subject of the Norrison prize essay for the ensuing year is—"The intent and use of the gift of tongues in the Christian dispensation."

Nov. 16.—The following degrees were conferred:—

Masters of Arts.—J. D. Walford, Trinity College; R. S. Ellis, St. Peter's College; Rev. J. T. Campbell, Queen's College.

Bachelors in Civil Law.—E. F. Acton, Trinity Hall; P. Laurie, St. Peter's College.

Bachelors of Arts.—J. Wood (Compounder), R. C. Ward, Trinity College; T. Wharbro, St. John's College; W. H. Bond, J. Hammond, Queen's College; H. W. Aker, Emmanuel College.

At a congregation held December 1st, Sir R. H. Inglis, Bart. D.C.L. of Christ Church, and M.P. for the University of Oxford, was admitted *ad eundem* of this University.

The following degrees were conferred:—

Masters of Arts.—J. A. Pearson, J. Pearson, J. Wilsa, Trinity College; G. Warrs, St. Peter's College; C. M. G. Jarvis, Pembroke College; T. Nicholls, Trinity Hall; O. De Beauvoir Prieux, Catherine Hall.

Bachelors in Civil Law.—T. M. Ready, Catherine Hall; Rev. T. Farwell, Queen's College.

Bachelor of Arts.—G. Hutton, Trinity College.

ROYAL SOCIETY.

HIS Royal Highness the President in the chair.—The address delivered by the Duke at the anniversary, an outline of which appeared in the last Number of the *Literary Gazette*, was read. At its conclusion, Sir Astley Cooper introduced Mr. Coleman, Professor in the Veterinary College. In admitting Mr. Coleman, his Royal Highness warmly complimented him on the success which had attended his study and practice of that particular branch of physiology. The second section of Mr. Faraday's papers on experiments in electricity was also read. It detailed a variety of experiments with their results and the author's deductions: these were, on the whole, confirmatory of M. Ampère's theory. Three or four gentlemen were elected fellows. His Royal Highness stated, in the course of the evening, that though the Council was guided by the Society's statutes in the expulsion of certain gentlemen who had forfeited their rank as fellows by non-payment of their subscriptions, the opinion of the Society's law-officer would be had on the subject; and it might appear, in the end, that they could be reinstated. Some very eminent persons are amongst the excluded.

SOCIETY OF ANTIQUARIES.

MR. HALLAM in the chair. Mr. Hallam exhibited a twisted gold ornament, sent by Mr. Hayes, found on the estate of Sir William

hamlet of Ofot and Underwood, in Nov. 1830. Mr. Hawkins exhibited some very curious specimens of chessmen, found at Lewes, one of the Western Islands; they were evidently of ancient date, from several of the figures bearing the Norman kite-shaped shields and conical helmets. Mr. Hawkins gave no description of them, as he stated that Mr. Madden had promised to communicate a paper on the subject. The secretary concluded the reading of Mr. Bruce's historical account of Fisher, Bishop of Rochester. It gave further details of the tyrannical proceedings against him; that he was subjected to two or three examinations on written interrogatories previous to his trial; and that on the trial only such parts of the examinations were read as were likely to tell against him, as was usual in proceedings at the suit of the crown during the arbitrary reign of Henry VIII.

ROYAL ASIATIC SOCIETY.

THE first meeting of the session was held on Saturday last; Sir Alexander Johnston, V.P. in the chair. A great variety of donations, principally for the library, received during the recess, were laid upon the table: among them were two works, presented by Maharajah Kali Krishna Bahadur, a learned native of India, viz. his translation of the *Pooros Parikhyat*, or Touchstone of Men—a collection of tales, illustrating the different characters of men, from the original Sanscrit into English; and an alphabetical collection, in English, of moral aphorisms, from various authors. The Maharajah was subsequently proposed as a corresponding member of the Society. Syeed Khan, agent to Abbas Mirza, Prince Royal of Persia, and Sir Robert Scot, K.C.B., presented some oriental curiosities to the museum. A letter from Dr. Turnbull Christie, dated Alexandria, August 9th, addressed to Sir A. Johnston, was read. Dr. Christie was intrusted with the diploma of honorary member from the Society to his highness the Pasha of Egypt, and announces in the letter that it had been delivered to the pasha, who received the deputation standing, which was considered a great mark of honour. The paper read was written by Mr. F. Mansbach, and communicated by Colonel Gilbert. It comprised a short account of the famous temple of Juggernath, in Cuttack, and of the Rat'h Jatra, or Car Festival, annually observed there. Colonel Gilbert, some time since, presented a model of the car, and on the present occasion he gave a large painting, by a native artist, of the interior of the temple. It is executed on canvass in varnished water-colours, and is consequently liable to be easily injured. At the same time Colonel Gilbert presented several specimens of cake and stick lac, used in India; a very fine piece of talc from a quarry in Ramghur; and a pair of woolen stockings manufactured in Cashmir.

ROYAL SOCIETY OF LITERATURE.

DEC. 7. The Rev. Dr. Richards, V.P. in the chair. Mr. Hamilton read a memoir on an ancient Panathenæan vase, in the possession of Mr. Burgon, of Brunswick Square; communicated in a letter to Mr. Burgon from the Chevalier Brøndsted. Of this paper, which was replete with curious historical and archaeological research, we shall give a *précis* in our next number. Several additions to the Society's library were, as usual, announced: among them, the valuable one of a complete set of the *Quarterly Review*, presented by Mr. Murray.

NEW PUBLICATIONS.

Select Views of the Lakes of Scotland. Engraved by J. Swan, from original Paintings by J. Fleming. Part V. Moon, Boys, and Graves.

LOCH VEOL and Loch Earn have furnished the subjects for the fifth part of this very pleasing publication. In connexion with the latter lake, the following incident, which occurred during a deadly feud between the M'Nabs and the Neishes, and which is related in the text, shews the frightful state of the Highlands of Scotland at the period in question:

"On one occasion, it is said to have been in the reign of James V., the chief of the M'Nabs, who resided at Kennil-house, near the head of Loch Tay, had sent his servant to Crieff for provisions for a Christmas merry-making. The servant was way-laid on his return, at Loch-Earn foot, and robbed of all his purchases; he went home therefore empty-handed, and told his tale to the laird. M'Nab had twelve sons, all men of great strength, but one in particular exceedingly athletic, who was ironically termed 'John mion Mac' an Appa,' or 'smooth John M'Nab.' In the evening these young men were gloomily meditating some signal revenge on their old enemies, when their father entered and said, '*Bhe'n oidch an oidch, n'am bu ghilleam na gillean*,' 'the night is the night, if the lads were but lads.' The hint was taken as it was meant, for each man instantly started to his feet, and belted on his dirk, his claymore, and his pistols. Led by their brother John, they set out, taking a fishing-boat on their shoulders from Loch Tay, carrying it over the mountains and glens till they reached Loch Earn, where they launched it, and passed over to the island. All was silent in the habitation of Neish; secure in their insular situation, and having the boats at the island, all had gone to sleep without fear of surprise. Smooth John dashed open with his foot the door of Neish's house, and the party rushing in, they attacked their old enemies, putting every one of them to the sword, and cutting off their heads, with the exception of one man and a boy, who concealed themselves under a bed. Carrying off the heads of their enemies, and any plunder they could secure, the youths presented themselves to their father; and smooth John, holding up the head of the chief of the Neishes, said to his father, '*Na biodh freamh, oirbh*,' 'Be in fear for nothing;' and the piper instantly struck up the pibroch of victory. The old laird, after contemplating the bloody heads, declared,—'That the night was the night, and the lads were the lads.'"

A new Series of Original Illustrations to all Editions of the Waverley Novels. Part IV. Moon, Boys, and Graves.

"THE Pirate," "The Fortunes of Nigel," "Peveril of the Peak," and "Quentin Durward," are the sources of the eighteen embellishments of which this fourth part consists; and if the number had been eighty instead of eighteen, those sources would not have been sensibly diminished. Such is the graphic richness and variety of the great novelist's scenes, that there is scarcely a page of his immortal productions which does not afford at least a single subject for the pencil; and that a subject so distinctly and characteristically defined in all its parts, that an experienced artist has little more to do than instantly to transfer to the canvass, in all their vividness and vigour, the images which have been presented to his

Stanfield, Cooper, Boxall, Smirke, Wright, Bonington, Webster, Leslie, Wilkie, Lander, and Landseer, as the painters, and of Rolls, Sangster, Mitchell, Freebairn, Fox, Davenport, Ensom, Bacon, Watt, Graves, Goodyear, Goodall, and Horsburgh, as the engravers of these illustrations, are a sufficient warrant of their merit. "Goffe's reception of Cleveland," by Stanfield; "Jin Vin in Dame Ursley's chair," by Boxall; "the conversation between Hermione and Margaret," by Smirke; "the meeting of Julian and Bridgenorth," by Bonington; "Peveril saluting the landlady," by Fraser; and, above all, "Geoffrey Hudson the dwarf reading to Peveril," by Wilkie; are among our special favourites.

We have also lying before us a proof impression of an admirable "Portrait of Sir Walter Scott," engraved by John Horsburgh, from a picture by John Watson Gordon, which will accompany the first volume of "St. Ronan's Well." It is full of fine character.

Miss Taylor, in the Character of Lady Honoria Howard, in the School for Coquettes. From a drawing by A. E. Chalon, R.A.; drawn on stone by R. J. Lane, A.R.A. Dickinson.

WHEN we say that Miss Taylor ought to feel obliged to Messrs. Chalon and Lane for having done her such perfect justice, nothing can be further from our intention than to be so ungallant as to insinuate that they have done her more than justice. Subject, designer, and engraver, have, in fact, combined to produce one of the most charming little female whole-lengths we have ever met with. The *espiglerie* of the countenance is especially bewitching.

A New Illustrated Road-Book of the Route from London to Naples. By W. Brockedon. Part II. Murray.

THE second Part of Mr. Brockedon's highly useful work conducts the traveller from Paris to Turin, and communicates to him all the information necessary, both to facilitate his journey, and to prevent him from passing without observation the various objects on his road which deserve to be remarked. It is accompanied by a map of the route, and by five beautiful plates engraved by Finden; one from a drawing by Stanfield, and four from drawings by Brockedon.

Picturesque Beauties of Great Britain.

No. I. Virtue.

AN addition to the already numerous list of topographical publications brought out at a price which puts them within the reach of all. The present series will comprehend the county of Kent, in twenty-four Nos., each containing four views; which, if we may judge from those before us, will be very pleasingly and satisfactorily executed.

Views in the East. From original Sketches by Captain Robert Elliot, R.N. Part XIII. Fisher, Son, and Co.

"PULO PENANG," "Mah Chung Keow-Canton," and "Ruins about the Taj Mahal, Agra," are the finely executed embellishments of this part of Captain Elliot's publication. In speaking of the Taj Mahal, Captain Elliot says: "No one that ever lived lies enshrined in such splendour as Shah Jehan and his wife Muntāza Zēmanī, whose remains are deposited in this gorgeous sepulchre. The Taj Mahal is very justly celebrated as the finest, and by far the most beautiful, of all the monuments of Hindoostan; its design is at once elegant and grand;

its dimensions are great, and its proportions admirable; the materials of which it is constructed are costly in their kind, and superior in their quality; its exterior and interior ornaments and embellishments are elaborate and rich; and whether it is viewed as a complete and exquisitely finished work of a graceful and noble style of architecture, or taken and examined separately in all its various and minutely-wrought parts, it exhibits a structure that surpasses, we might safely assert, any thing of the kind that continues on the face of the earth, at this day, to arrest the attention, and demand the admiration, of those who travel into distant lands."

The History of the County Palatine of Lancaster.

By Edward Baines, Esq. Part X. Fisher, Son, and Jackson.

WE do not remember to have ever seen two more beautiful little prints, in their way, than the views of "Windermere Lake" and "Bold Hall," engraved from drawings by G. Pickering; the former by W. Le Petit, the latter by C. Mottram.

BRITISH INSTITUTION.

WE have had an opportunity of taking a hasty survey of the studies and copies by English artists from the great masters, so liberally left by his majesty, and by their other noble and liberal owners, at this national institution. The multitude is so great, that we cannot venture upon the subject this week; but we reserve our stricture for the next.

CHOLERA MORBUS.

Sunderland, Dec. 7.

MY DEAR SIR,—There has been some misunderstanding with regard to the official report sent from this town. The amount of new cases, deaths, and recoveries, by that report, is 376, 121, 193; while the balance, given up to this day, Dec. 7, is 37, when, by the above table, it should be 62. In the daily report, the 25 cases of simple diarrhoea, mentioned in my last, are subtracted from the column of remaining cases, and not from that of the total amount, which should be—from the commencement 351 cases, 121 deaths, and 193 recoveries, leaving a balance of 37. The cholera, though a melancholy addition to our catalogue of diseases, is more remarkable for its rapid fatality than quick dissemination; and should any thing like a successful treatment result from experience or chance, it would be shorn of its terrors, and be met with the same calmness as any other malignant disease. In our ignorance of the nature of contagion, there appear to be all the predisposing causes in this town which can be met with in any other congregation of human habitations in the same country; and if in a different season it does not shew itself with a more deadly aspect, it may be a painful and afflicting visitation, but never a plague or pestilence such as in former times has ravaged this our "father-land." The seven new cases reported to-day are all in the poor-house of the parish of Sunderland. It is not at all one of those poor-houses which reflect credit on this country, and is in a bad situation. The disease broke out there on the 26th of November, since which twelve or thirteen persons have been its victims; among these was the sister-in-law of the resident guardian. The nurse at the cholera hospital took ill after breakfast on the 2d instant, and died a little after 8 o'clock the same evening. She was an excellent nurse, cheerful in disposition, and fearless and assiduous in her duties.

Great virtues manifest themselves in times of great affliction. The rector of Sunderland parish, the Rev. Mr. Gray, is to be seen for hours together in the hospital, as reckless as a professional man; and there, as at their homes, he is a source of comfort and constant relief to the afflicted poor. We had a case of a minister of a dissenting chapel, who performed evening service, and fell a victim to cholera the next day. Professor Magendie and his companion Dr. Guillot have arrived here from Paris. The professor is quite satisfied that it is a new disease; but I am sorry to say he meets with the same difficulties in prosecuting his inquiries that we have all met with; and I fear his duties will call him away before proper opportunities of studying the disease can possibly be afforded to him. Dr. Guillot will, however, remain; and then there will be less danger of a hasty examination leading to incorrect results. We have had medical gentlemen here from various towns of Great Britain: Dr. Lane, from Liverpool; Dr. Law, from Dublin; Dr. Macfarlane, from Perth; Mr. Parsons, from Birmingham; Mr. Hulton, from Edinburgh; Mr. Baker, from Leeds; and a gentleman from Manchester. Once a-week we meet the medical men of the town, and Drs. Daun and Gibson, to converse upon the subject that at present engrosses our whole mental faculties, and almost baffles the acutest perception.

The disease has shewn itself since my last in three villages, Houghton le Spring, Penshaw, and Southwick. The first is six miles from Sunderland, and half way on the great road to Durham. A pedlar woman, Margaret Liddle by name, arrived there from Sunderland on the afternoon of the 1st, and died at 5 o'clock next day. Several have since been afflicted.

Penshaw and Southwick are on the river side. In the former village, George Dodd, a labourer, was the first taken ill, and died on the 2d. Two cases which were fatal—the one in eight, the other in nine, hours—followed. One of them was the village carpenter, and Dodds, undertaker. None of the cases at Southwick have been fatal. No new cases have been reported from Newcastle. There was great violence shewn in Sunderland at the first reports of the existence of this disease, but it is still greater in Newcastle. The *Tyne Mercury*, alluding to the visits of men who daily expose their lives in the cause of humanity—"I allude to the medical commission—says, 'They hover over us like birds of prey.' It must certainly reflect as much upon the public to tolerate, as upon the author to indite, such imbecile expressions. Truth can alone inspire a nation or an individual with confidence; and it will be found rather in science, or the application of one fact to the knowledge of another, than in the abuse of the privilege of freedom of opinion or the liberty of the press.

W. AINSWORTH.

Mémoire et Observations sur le Cholera Morbus régnant à Varsovie. Par le Docteur F. Antomarchi.

IN this pamphlet of thirty-six pages, which we have just received from the continent, the Doctor states that he was induced, by his admiration of the Poles, to go to Warsaw, and offer his services to the national government, by which he was well received, and appointed inspector-general of the military hospitals; a place created for him. He was requested to proceed as soon as possible to the army.

Most of the persons attacked were of the most wretched classes of society, lodged in filthy

habitations in narrow damp streets; and when the cholera attacked any of the higher classes, it was to be ascribed to their total neglect of regimen. During his stay of not quite four months at Warsaw (from May 17 to Sept. 6), he had of course ample opportunity for observing the disease; and the opinions of so eminent a physician, founded on experience, are entitled to great attention. The following are extracts from letters to the Polish committee at Paris, to the physicians of France and other countries, &c., and from the memoir.

"The cholera morbus, from its specific character, may be defined to be the *asphyxia of the heart* (I afterwards called it *choleric asphyxia*). The brain and spinal marrow have little to do with the disease; the heart alone is the seat of it."

"Being appointed by the national government inspector-general of the military hospitals in Poland, I owe it to truth and to myself to rectify the accounts propagated by ignorance or malevolence of the ravages of the cholera morbus, and of the sanitary state of Poland."

An extract from the general registers of the hospitals, from the 1st of March to the 31st of May, 1831, is annexed, shewing that the mortality was very small, and that, including the deaths by cholera morbus, only 95 patients died out of 10,000.

"The reigning malady, which is advancing towards the west of Europe, is not only the cholera morbus, as well known in Europe as in Asia and America—it has united itself with a much more terrible malady, the *gradual asphyxia*, which I have called *choleric asphyxia*, in two articles published in the Polish journals. It varies according to the different individuals who are attacked by it. Its character being sporadic, every body may be affected by it; but as it occurs solely under certain conditions and in certain individual circumstances, people may preserve themselves from it by sobriety, great cleanliness, abstinence from all food difficult of digestion, and especially by taking care to keep themselves warm; the perspiration being of great importance in the development of this malady.

"*Symptoms.*—The precursory symptoms are very vague, and very difficult to define precisely. Cramps in the extremities, and abdominal pains, sometimes precede this disorder. During its intensity the pulse and animal heat disappear, and are succeeded by a general lividity and as icy coldness of the body; at the same time the skin is dry, the countenance livid, *choleric*, bearing an impression of terror, the tongue and the mouth cold, the lips black and dry, the eyelids black, the eyes turned up and sunk in their orbits, the abdominal coats more or less contracted and depressed, the breathing short and hurried, groaning, hiccough, vomitings and dejections more or less frequent, watery, brown, yellowish, or whitish, when they exist (for most frequently these vomitings and dejections do not take place), extreme anxiety, the voice very weak, hoarse, and *choleric*; a general stupor, and death. The commencement of the *choleric asphyxia* is generally sudden, apoplectic, and more or less violent.

"I must observe, that this affection immediately precedes or follows the cholera morbus, bringing with it the suspension of the animal functions, and death. In almost all cases, cholera morbus is only accessory to choleric asphyxia.

• "I use the word *choleric* to designate the appearance of the face, because it is impossible to describe it exactly. It is not Hippocratic, but entirely *asi generis*. The name may be said of the voice."

"*Treatment*.—The general indication is to employ all possible means to vivify the system, by giving an impulse to the circulation of the blood and the animal heat. The patients labouring under choleric asphyxy must be warmed with dry and hot cloths; they must use warm baths (28° to 30° by Reaumur's thermometer) and vapour baths; numerous dry cuppings must be applied to the breast, along the back, &c., sinapisms to the limbs, the moxa on the whole epigastric region, instantaneous blisters to the lateral parts of the neck, warm drinks, and *laevements*: in a word, the treatment usually employed in cases of asphyxy in general, is very efficacious in choleric asphyxy.

"It is impossible to attend properly to patients under choleric asphyxy in the hospitals.

"*Non-contagion*.—As inspector-general of the hospitals, I have been able to see the disease, to make myself acquainted with it, to study it in all its forms, and to convince myself that it is in nowise contagious: the numerous daily reports, transmitted to me by a great number of physicians, assistants, &c. &c., sufficiently confirm this assertion.

"The experiments made on men and animals demonstrate this fact. Indeed, several physicians, among others, who inoculated themselves with the blood, the intestinal mucus, &c. &c., in short, with whatever was the most likely to communicate the disease, felt not the slightest effects from it.

Our next extract is horridly sickening.

"Animals, such as fowls, Chinese pigs, rabbits, &c., having been fed exclusively for several days on the blood, mucus, intestines, and other viscera, cut small, of cholera patients, far from being hurt by this food, grew fat, and were afterwards eaten by the attendants on the sick, who declared the flesh to be better tasted, more juicy and delicate, than usual. In a word, as a last proof of the non-contagiousness of the disease, none of the physicians, the assistants, the attendants, or even persons who slept in the same bed with cholera patients, and the other patients mingled pell-mell with them, caught the disorder.

"If all these indisputable facts in favour of non-contagion—if the honourable testimony of above four hundred eye-witnesses, most of them physicians, are reckoned for nothing—we must believe that the world does not choose to be enlightened and to know the truth."

DRAMA.

DRURY LANE.

ON Tuesday evening, Rossini's opera of the *Barber of Seville* was performed at this theatre with more of the author's music than hitherto, and altogether with much more operatic effect than has been usual on the English stage. Mrs. Wood, as *Rosina*, sang admirably: the lesson-song at the piano, in particular, was given with extraordinary power and effect. Mr. Wood enacted *Count Almaviva*; but we cannot compliment him—the music seemed beyond his powers, and his manner altogether was spiritless, and that of a man who had undertaken a task to which he was sensible he was not equal. By the by, if Mr. Wood must wear a Spanish cloak, he should learn to use it; he made his appearance with the cloak thrown over the right shoulder instead of the left, and although he held it fast with his left hand, it slipped several times, and, to prevent its falling to the ground, he was compelled to gird it round his waist instead of retaining it negligently on his shoulders. This is "villanous" in a Spanish grandee. Mr. H. Phillips, as the Andalusian *Barber*, sang the music of the character with great beauty and science. Of his acting, we should observe, bustling and spirited as it was, that Figaro's familiarity should be imbued with a due portion of obsequiousness. The fine voice of Mr. Seguin was heard to great advantage as *Dr. Bartolo*; he will, doubtless, be a "valuable auxiliary" (as the phrase runs) to the theatre. His dress was appropriate; but he so fashioned his head that it was strikingly like the portrait of the present pope, as shewn by the engraving in the Catholic Directory. The opera was received throughout with well-merited approbation. Mr. Bedford as *Basil*, Miss Russell as *Marcellina*, and the rest of the performers, exerted their best efforts for its success.

After the opera, "God save the King" was loudly called for, and sung by the whole of the performers. Mrs. Wood electrified the audience by her splendid style of singing the concluding verse.

The repetition on Thursday was equally triumphant; and followed by a new drama, in two acts, called the *Bride of Ludgate*. It is reported to be from the pen of Mr. Gerald, and is a very clever and amusing piece, founded on one of the many amours of Charles the Second. We see nothing in this production to induce a suspicion of its being borrowed; on the contrary, the neatness and spirit of its dialogue, the wit and character of its allusions, and its *tout ensemble*, smack of originality as well as of dramatic talent. We have not time to detail the plot; but cannot refrain from mentioning some of the author's hits which pleased us much. Charles, in playing the lover to the young bride, about to wed the old usurer, says, "You would not surely keep all the honey for the winter?" As king, he says elsewhere, "My place would soon be filled;" and when provoked in his disguise to fight, and taunted as a coward for refusing, "I always fight by proxy; and if you think the ready management of a weapon the sign of a gentleman, I can have ten thousand of them at fifteen pence a-day!" The whole of Charles's conversation is delightful, and Wallack made it tell. The other parts were ably personated: Miss Phillips, a sweet, and, where necessary, an affecting *bride—Ruth*, her maid, a perfect abigail, Mrs. Orger—*Shekel*, the old usurer, J. Russell—*Captain Mouth*, a Bobadil, Cooper—*Doeskin*, a serving man, Harley—*Mapleton*, a round-head, and yet a lover, H. Wallack—*Agate*, Mr. Hughes, &c. &c. &c. Altogether, we were much gratified with the drama, which has great sterling merit.

COVENT GARDEN.

A LITTLE piece, in one act, with songs, called *Country Quarters*, was performed for the first time on Tuesday. It is one of those trifles which abound on the French stages, and which are regularly transmitted to this country, to be warmed up for the entertainment of an English audience. To criticise such productions with accuracy would be labour completely thrown away. We shall only observe, that it has the usual routine of characters. A husband addicted to flirtation; a wife fond of wearing the breeches, and not a little jealous; an amorous old guardian, with an insipid ward; a lying footman; and a waiting-maid, who assumes a variety of disguises. It did not, however, appear that there was any very adequate reason for the different disguises and contrivances which were resorted to, and we are inclined to think that *Much Ado about Nothing* would have been a more appropriate title than *Country Quarters*. The performers did their best. Miss

Taylor looked vastly well in her hussar uniform, and sang a song or two in a very agreeable manner; but the chief business of the piece devolved upon Miss Poole, "a precious little article," as one of the characters denominates her, and ably did she sustain the burden. "The Drummer Boy," with the exception of the noisy drumming-song, was good; but the captain's groom was excellent. No actor of forty years' experience could look more knowing, or be more saucy in demeanour, than this very little lady; and her changes of dress were made with a rapidity worthy of Mathews or of Yates. The piece was well received, and fills up an hour that intervenes between the performance of *Artaxerxes* and the regular after-piece.

We are happy to see that the confidence which Miss Shirreff has acquired by practice has given additional strength to her vocal powers; and although there was little room for improvement, that little has been accomplished in her personation of *Mandane*. Mr. Wilson is also more at home in *Arbaces*; but the performance which eclipses every thing we have seen for years, is the *Artabanes* of Braham, not only in singing, but in acting. It is perfection itself.

We take this opportunity of farther correcting our opinion about the *Irish Ambassador*. Since its first night it has been justly curtailed; and the actors, being now sure of their words, are at leisure to practise some clever by-play, which, with a few whimsicalities introduced by Power, have materially improved its effect. Still, we think that it is hardly worthy of Mr. Kenney's acknowledged tact and talent as a dramatist.

WE insert with pleasure the following reclamation of Dr. Essex, a very estimable man, and very able musical teacher. It is as injudicious as unjust to cast the merits of such a master into oblivion—as if that could enhance the praise of his successor, or elevate the character of the pupil. On the contrary, it seems to us that Dr. Essex, fully appreciating the talents of Miss Shirreff, by sedulously cultivating them laid the sure foundation of her success under Mr. T. Welsh; both masters by their cares doing credit to themselves and their fair and interesting charge.

To the Editor of the Literary Gazette.

SIR,—You will indulge me much by informing the public, through the medium of your extensively circulated *Gazette*, that Miss Shirreff (the young lady who made her appearance as *Mandane*, in *Artaxerxes*, Thursday, last inst.) received her musical education from me—was brought out at the oratorios as pupil of Dr. Essex, March 5th, 1828, and sung the remainder of that season with a considerable share of public applause, very much to my gratification and credit as her master. Miss S. was under my tuition five years, during which period she became (what every good vocalist ought to be) a sound musician, in addition to her skill as a piano-forte performer and singer. When Miss S. was studying under me, a theatrical engagement was not contemplated or approved by her friends—I therefore educated her as a concert singer; and as such she was very favourably received by the public, and well reported of by the *Literary Gazette*, during the months of March and April, exclusive of the public papers of the day. Miss S. was (unfortunately for me) indisposed the whole of that season—therefore her natural powers were not developed to the extent they now are. Miss S.'s articles with me expired 29th Sept. 1832, since when, she has turned her attention to the stage, and has (very properly) placed herself under the tuition of Mr. Welsh, who, independent of his being a very good teacher, has, I am given to understand, considerable theatrical influence, and that line of the profession his particular forte. My reason for stating this to the public is, that being wholly dependent on my professional exertions for the support of myself and family, and having cultivated Miss Shirreff's musical talents to a high point, I may not be deprived of the credit justly due to my instructions; at the same time I beg to be distinctly understood, that I have no wish to detract from the merit of what Mr. W. may have done during the very short period Miss S. has been his pupil.—I beg to be considered most respectfully yours.

T. ESSEX, Mus. Doc. Oxon.

51, Dorset Place, Dorset Square, Regent's Park.

2d edition, enlarged, 8vo. price 10s. 6d. cloth.
INQUIRIES concerning the INTELLECTUAL POWERS, and the INVESTIGATION OF TRUTH. By JOHN ABERCROMBIE, M.D.
 Fellow of the Royal College of Physicians of Edinburgh, &c. and First Physician to His Majesty in Scotland. Edinburgh, Waugh and Innes; and Whitaker, Treacher, and Co. London.

Also, lately published, by the same Author, in 8vo. 2d edition, enlarged, 12s. boards.
Pathological and Practical Researches on Diseases of the Stomach and Esophagus.

In 8vo. 2d edition, enlarged, 12s. boards.
Pathological and Practical Researches on Diseases of the Stomach, the Intestinal Canal, the Liver, and other Viscera of the Abdomen.

In 12mo. 2d edition, enlarged, price 2s. boards.
SURE METHODS OF IMPROVING HEALTH AND PROLONGING LIFE, by regulating the Diet and Regimen. Embracing all the most approved principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the Cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life. To which are added, an Account of the Art and excellent Effects of Training for Health, Rules for reducing Corpulence, and Maxims for the Bilious and Nervous, &c. Illustrated by Cases.

By T. J. GRAHAM, M.D. &c.
 "We are disposed to think it the most useful and rational work of the kind we have met with. It contains many hints novel to us, and is altogether an admirable code of health."—*Atlas*, Sept. 1827.

"The tendency of this volume to advance the important objects which it proposes is unquestionable; and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1827.

"That men of all habits will derive information from it, calculated to increase their comfort and extend their days, is firmly our conviction."—*Edinburgh Courier*, Jan. 1828.

"This edition is attended to an Appendix, containing a full Account of the Cholera, with the best Remedies, as ascertained by Physicians of the greatest experience in that fatal Disease. London: Published by Simpkin and Marshall, Stationers' Court; sold by all Booksellers.

Of whom may be had,
 Lately published, by the same Author, 2d edition, in 1 large vol. 8vo. price 16s. boards, with Engraving.

2. A Chemical Catechism, in which the Elements of Chemistry, with all the recent Discoveries, are fully and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufactures, and Medicine, described. Illustrated by Notes, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms.

"We cannot but recommend it. Every subject of interest connected with this delightful science is treated of in the clearest manner."—*London Weekly Review*, 21st Feb. 1828.

"Every thing is here written up to the latest date, and the work cannot fail, we think, of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—*Monthly Magazine*, 1st March, 1829.

"The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements to the compound and illustrative branches of the study. It is very superior to Parkes's."—*Atlas*, 1st March, 1829.

In 2 vols. with 10 highly finished Engravings by Finden, and 10 Woodcuts by Williams, &c.
TRADITIONS OF LANCASHIRE, Second Series.

By J. ROBY, M.R.S.L.

In post 8vo. price 5s. 6d. boards.
THE LAST OF THE SOPHIS. A Poem.
 By C. HENNINGSEN, a Minor.
 London: Longman, Rees, Orme, Brown, and Green.

BOOKS IN THE PRESS.

On Wednesday next,
THE ROBBER.
 By the Author of "Charley the Fatalist." In 3 vols.
 Now ready,
 II.

The Jew; a Novel. 3 vols.
 "This is unquestionably a very extraordinary production. The author has fallen upon most picturesque times—full of strong combinations and striking contrasts—rich in the colourings of light and shadow. The intrigues of princes, and the councils of the church—the pomps of chivalry, and the splendour of burgher festivity—the robber hold of the German Baron, and the man-in-the-moon of the midnight murderer—the ceremonies of the confessional, and the silent solemnities of the Jews—figure in an endless variety, that leaves untouched which can mark or characterise the age. And all this mass of broad historic painting is harmonised and mellowed by a thousand minute touches, descriptive of domestic habits and superstitions, and manner and accidental customs and ceremonies, which would almost lead us to suppose that the author was himself a translation from the times with which he deals so familiarly. The characters are multiplex beyond all precedent; and the plot conducted by fifty convoluted streams, tending to and finally mingling in one. The narrative is composed of many distinct threads in the hands of a most skilful weaver, perpetually crossing and mixing with each other, without ever becoming entangled, and knit together with a skilful and not seldom really very admirable. The effect of the whole is that of a great historical picture, wrought out by a variety of episodes, and composed of a thousand groups—each painted with extraordinary fidelity and minuteness of detail, yet contributing in due proportion to the effect of the whole, and in which the leading incidents and principal characters are clearly discriminated and boldly marked. We shall not even give an extract, for we could not hope to enable the reader, from any number of extracts, to form an opinion of the merit of a work whose chief characteristic is the skilful use of a mass of materials wrought enough to form the ground-work of a whole library of modern novels."—*Albion*, Dec. 2d.

III.
Italy's Romantic Annals, forming the New Series of the "Romance of History." 2 vols. By Charles Macfarlane, Author of "Constantinople in 1809."

IV.
The Geographical Annual for 1832.
 "This beautiful and most useful little volume is a perfect picture of elegance, containing a vast sum of geographical information."—*Literary Gazette*.

It contains 100 steel Engravings of all the States, Kingdoms, and Empires throughout the World. Price 12s.; finely coloured, 21s.; in morocco, 3s. extra.

V.
The Affianced One. By the Author of "Gertrude." 3 vols.
 "One of the best of novels."—*Metropolitan Magazine*.
 "It abounds with lively sketches of society and sparkling anecdotes."—*Belle Assemblée*.
 Printed for Edwards and Bell, New Public Subscription Library, 25, Holles Street, Cavendish Square.

Albion Street, Dec. 2, 1831.
FIRST COMPLETE and UNIFORM EDITION OF THE LIFE AND WORKS OF LORD EYRE.

In order to prevent disappointments in the delivery of the First Volume of the above Work, Mr. Murray requests that Country Booksellers will do him the favour of sending to their Correspondents in London by Thursday, the 15th inst. the amount of the Orders they may by that time have received.
 "Country Booksellers may be supplied with Prospectuses for distribution, on application to their Correspondents in London."

Mr. Lodge's New Passage.
 On Monday next, in 1 vol.

THE PEERAGE OF THE BRITISH EMPIRE, as at present existing; arranged and printed from the Personal Communications of the Nobility.
 By EDMUND LODGE, Esq.
 Norroy King of Arms, F.S.A., &c.
 To which is added, a View of the Baronetage of the Three Kingdoms.
 Saunders and Otley, Public Library, Conduit Street.

On Monday, in 3 vols. elegantly bound, a Second Series of
MISS MITFORD'S AMERICAN STORIES FOR CHILDREN.

Also, uniformly bound,
The First Series, in 3 vols. 10s. 6d.
 Whittaker, Treacher, and Co. Ave Maria Lane.

Lift of Frederic the Great.
 On Monday the 19th inst. will be published, in 2 vols. 8vo. with a Portrait, from a Picture in the possession of His Majesty, **THE LIFE OF FREDERIC THE SECOND, KING OF PRUSSIA.**
 By LORD DOVER.
 London: Longman, Rees, Orme, Brown, and Green.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 15, South Molton Street, Oxford Street: sold also by J. Chappell, 58, Regent Chambers; E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Stan. Edinburg; W. Smith, 48, St. Mark Lane; and others. Also, at Glasgow: and J. Cunningham, Dublin. Agent for America, O. Rich, 13, Red Lion Square, London.
 J. MOYES, 33, Castle Street, Leicester Square.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 778.

SATURDAY, DECEMBER 17, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Some Memorials of John Hampden, his Party, and his Times. By Lord Nugent. 2 vols. 8vo. London, 1832. Murray.

THE title-page accurately defines the character of Lord Nugent's historical work. The mere biography of Hampden, famous though his name is, would have been too meagre; the investigation of all the matters with which he was politically connected would have been an entire and general history. His lordship has judiciously adopted the middle course; and while he has brought to light every thing which could be elucidated respecting the personal career of his hero, he has blended the narrative with some memorials of his party and his times—memorials apposite to, and which do not overlay, the more immediate theme of his inquiry.

From the noble author's known opinions, as well as from his choice of subject, it may readily be anticipated that he is extremely adverse to King Charles and the Royalists; and, on the other hand, views the lives and conduct of their adversaries with a very favourable eye. It is not our province to debate the question; but as we noticed D'Israeli's* *Commentaries* without canvassing his political bias, so will we report upon Lord Nugent's; leaving it to partisans on either side to determine which is the most correct and well founded, and which the best sustained by absolute facts; for it is long since we have ourselves been misled by the Romances called History.

Of the early life of Hampden very little has come down to our day; and the brief but important space of his public life is nearly all which Lord Nugent had before him. Here, however, he has rectified the errors of the *Biographia Britannica*, Chalmers' *Biographical Dictionary*, and other biographies; and amplified the accounts of Brodie and Hallam,† besides giving us some interesting private letters and documents hitherto unpublished.

It will readily be conceded, that to afford an adequate notion of a publication of this kind is hardly possible in a journal at once so compendious and various as the *Literary Gazette*: in truth, we can only hope to do so, and very

* With this agreeable writer his lordship breaks a lance or two, in a manner which may probably lead to some controversy; *sed non nostrum tantas componere lites*. The best anecdote we ever heard against the precision of Mr. D'Israeli is related of his tale of the country squire, who killed a fox within three miles of Edgehill on the day of the battle, and was so intent upon his sport, that he never heard, or heard of, that great event; but returning home full of a hard run, for many a day described the vicissitudes of that chase. Now the battle of Edgehill was fought on a Sunday!!!

† Among the materials for English history (his lordship observes) which have hitherto been but imperfectly examined, and which require the most careful arrangement, are the early sessional papers of the House of Commons. If properly classified, they would form a most valuable body of historical evidence, containing much interesting correspondence, and other matter, which has never yet been published; much, doubtless, that is not known to be in existence. These papers are now in a state which makes all casual reference to them very laborious. The journals alone are not in all cases to be trusted."

imperfectly, by the utmost extent of extracts which our limits admit. The following remarks on the advance of the spirit of liberty in Europe in the 16th century, afford a fair specimen of the noble writer's style and powers of thought.

"Thus was a great moral revolution at work, checked and delayed for a time by the power, the address, and the popularity of Queen Elizabeth, but still tending forwards, when the sceptre of this mighty princess passed into the hands of her kinsman. Such a spirit it required a sovereign of more than ordinary qualities so to direct, as that the reform should advance by steady and controllable degrees, and in such a manner as might carry with it the appearance rather of a wise agreement between prerogative and liberty, than of a forcible abridgment of the one, and a contested triumph of the other. In the later reigns, all the recorded precedents had leaned towards the claims of prerogative; but all the feelings of the people strengthened those of liberty. The feudal dues and tenures, although not abolished by statute till near a century afterwards, had, one by one, faded away, and with them had ceased all the protection which, during times when law was weak and civil rights imperfectly understood, the feudal power had afforded to the people. The feudal lords had, in their jealousy, established certain securities for themselves, and had maintained them by their power. These became incidentally a protection to other classes also. Upon the decay of this power, therefore, it was necessary that some new barrier should be raised against the crown, or additional strength and effect given to some old one. By the common law of parliaments, by Magna Charta, by the Forest Charter, the Statute de Tallagio, and the Statute of Provisors, severally, the monarchy of England had been declared to be a limited one; and so long as the military force of the country remained in the hands of the nobles, it did not concern them to look further than to military force for means whereby the limitations might be preserved. But that power had lately been withdrawn from them by the policy of Henry VII., who had provided for the maintenance of peace and the succession by rigorous edicts, limiting suit and service. The army, such as it was, had become now, for the first time, the king's army; for personal service had been commuted for rent; and those who had once been vassals had now become tenants. A little later in France, and under the able government of Ximenes in Spain, the influence of the nobles had been in like manner weakened. Then the commercial spirit arose and extended rapidly, and the luxuries which it introduced gradually increased the expenses and wants of the great families which had outlasted the wars; but it was imperfectly and ill directed. Wealth changed hands, and among the labouring classes (as is often the case upon the sudden introduction of any new system for applying capital), there was a grievous want of the means of subsistence. Public begging, and the

unappeasable tumults of starving men, ensued. It is true that, in the cities and sea-ports, the third estate was becoming enlightened and rich; but it had not yet power. All saw the means of power increasing in their hands, but few saw the manner of giving them direction or effect. The popular influences could be permanently secured and usefully administered, only by a parliament more freely representing and more intimately connected with a people, particularly the citizens, who were so manifestly increasing their share in the general stock of wealth and intelligence. The control over the revenue had been repeatedly contested, and finally acknowledged as an undoubted privilege of parliament; but, under different names, the means of supply were still left by usage in the sovereign's hands, and the sovereign had never been reduced to the necessity of making terms on this matter with his people. Mr. Hume, however inconclusive the argument which he founds upon it, is surely right in this position—that, of the two great contending principles of these times, it was the popular spirit which first encroached upon the prerogative, and not the prerogative on liberty. It is clear that, in exact proportion to the improvement in the intelligence, and consequently in the manners of a people, their influence in government will and ought to increase. A wise prince would have perceived that this tendency was not to be rudely thwarted, and would have bent his policy to meet with grace the growing genius and demands of the time."

Many of our readers will doubtless apply this reasoning to the present period—the resemblance is sufficiently striking. Characters of Elizabeth and her successor are ably drawn, according to Lord Nugent's view of both; and a little farther on, there is, we think, a satisfactory refutation of Mr. D'Israeli's charges against Sir John Eliot; on the ship-money question a like stand is made, and Hampden vindicated at length by his biographer. The discussion, however, is altogether too much for our bounds, and any partial extract would only mar its effect: we will therefore turn to the account of Hampden's leaving his paternal estate for the last time.

"During this conflict, Hampden was strenuously engaged in the various business of the house. No question of principle or detail, whether affecting the most important interests of the commonwealth and posterity, or the smaller concerns to be adjusted for his own county in the assembly to which she had sent him, none were too mighty for his capacity and courage, or too minute for his indefatigable industry. To all he applied those natural gifts of a ready understanding and a winning persuasion, as well as those acquired habits of arrangement, which fitted him to meet the necessities of the times and the demands of his electors. During the whole of the three last eventful years of his life, which were now beginning, his mind, which before had been occasionally applied to unconnected pursuits, was, without intermission, employed in

that uniform course of public service, to which his great duties, and his own deep sense of them, now wholly bound him. Never inactive, he had hitherto divided his time between the business of parliament, the study of books, and the amusements, as well as the useful occupations, of a country life. As a magistrate, he had borne a diligent share in the local affairs of his county; but he had also found leisure for indulging himself in 'an exceeding prepenseness to field sports,' and in the embellishment of his paternal estate, of which he was very fond. When, therefore, he finally abandoned all those pursuits and habits of social ease, which his temper and talents, and the mild virtues of his domestic character, so much inclined and fitted him to enjoy, the motive must have been powerful, and the sacrifice great. From this time till his death, except at some few hasty intervals, when business of public concern called him from the parliament, from the council, or from the camp, he never again returned to that home, to which the remembrances of his youth, his studies, his pleasures, and the blameless happiness of tranquil hours, had so strongly attached him. His mansion still remains. It stands away from both the principal roads which pass through Buckinghamshire, at the back of that chalky range of the Chilterns which bounds, on one side, the vale of Aylesbury. The scenery which immediately surrounds it, from its seclusion little known, is of singular beauty; opening upon a ridge which commands a very extensive view over several counties, and diversified by dells, clothed with a natural growth of box, juniper, and beech. What has once been the abode of such a man, can never but be interesting from the associations which belong to it. But, even forgetting these, no one, surely, who has heart or taste for the charm of high breezy hills, and green glades enclosed within the shadowy stillness of ancient woods, and avenues leading to a house, on whose walls the remains of the different styles of architecture, from the early Norman to the Tudor, are still partly traced through the deforming innovations of the eighteenth century,—no one, surely, can visit the residence of Hampden, and not do justice to the love which its master bore it, and to that stronger feeling which could lead him from such a retirement to the toils and perils to which, thenceforth, he entirely devoted himself."

On proceeding to the second volume we find so great an increase of interest, that we must again regret our inability to illustrate it sufficiently. The "Scottish Incident" is well, though shortly, stated; and so is the Irish rebellion and Protestant massacre. The "Grand Remonstrance" may justly be considered as the end of all dealing or intercourse between the opponent parties which could avert a civil war; and after the attempt to arrest the five members, that unhappy war openly broke out.

"By such as had looked forward through passing events to consequences, an appeal to arms must for a long time have been deemed unavoidable. Yet, to most, even of those who took part in the preparations and watched their progress, the great civil war came at last as matter of surprise. Many, of both parties, who had fanned the hidden and infant spark into life, saw with dismay the flames as they burst forth from either side, soon to meet in one general and mingling blaze. Thus it must ever be in civil war. By most men, however long it has threatened in its approach, it is not seen to be imminent until it is upon them; nor can it be comprehended in all its dreadful particu-

lars until they are to be dealt with face to face. The images of extreme and unnatural strife, so often pictured by the poet,—brother battling against brother,—the arm of the son raised against the parent,—are not among those which the most commonly present themselves to afflict society in civil war. But it is, that many of those ties of habit and affection which bind men the most closely to life are loosened,—severed by public enmity, or, what is less tolerable still than public enmity, suspicion and distrust. These are unhappinesses which, in civil war, may be the lot even of those whose condition leads them into the dispute only as the attached and obedient followers of the standard raised by some neighbouring influence, and among whom the connexions of friendship and of kindred are, generally, the least liable to be disturbed. But with those on whom their station imposes loftier callings, and who are answerable in the highest degree for the course which they assign to themselves and others, much more fearful are the trials which must hourly occur;—duties in conflict,—every private affection opposed to every public obligation,—and every plea, the strongest, for sympathy and protection, which cannot be answered. Even things inanimate, which appeal to remembrance only, crowd in with their numberless associations, to tell us how unnatural a state of man is civil war. The village street barricaded;—the house deserted by all its social charities,—perhaps occupied as the stronghold of a foe. The church where lie our parents' bones become a battery of cannon, an hospital for wounded, a stable for horses, or a keep for captives;—the accustomed paths of our early youth beset with open menace or hidden danger;—its fields made foul with carnage; and the imprecations of furious hate, or the supplications of mortal agony, coming to us in our own language, haply in the very dialect of our peculiar province;—these are among the familiar and frequent griefs of civil war. The family of Hampden did not escape those divisions which so unhappily distracted some of the noble houses at this time. Mr. Alexander Hampden had not only formed opinions which separated him entirely from his illustrious kinsman; but, about a year after the commencement of the war, he gave testimony of them by an act dishonouring to the name and station which he bore. He engaged himself in Edmund Waller's plot; two first cousins of John Hampden thus joining in a conspiracy against the persons of the principal members of the parliament, which, if not originally a scheme of assassination, was one which could have succeeded only by bloodshed, and for which two of the subordinate agents justly suffered an ignominious death. The first year of the civil war, grievous in so many ways for public considerations to Hampden, was a time also of great domestic affliction to him. Soon after the outbreak his eldest son died; but the severest blow was the loss of his favourite and beloved daughter, Mrs. Knightley. This was a sad visitation, the memory of which hung gloomily over his spirit during the short remainder of his life.

"In was under the woody brows of his own beautiful Chilterns that Hampden first published the ordinance to marshal the militia of his native county. The parishes and hundreds, often with their preachers at the head, mustered at their market-houses, to march forth to training. In the dearth of all the ordinary implements of war, arms and accoutrements of the most grotesque fashion now left the walls where, from the times of the civil wars of the

two Roses, they had hung as hereditary trophies in the manor-houses, the churches, and the cottages of the yeomen. In the returns of arms, particularly of the levies of the northern parts, at the first outbreak, the long-bow, the brown bill, and the cross-bow, resumed their place among the equipments of a man-at-arms. It was not till some months after, when the stores of Hull, and Newcastle, and Plymouth, and of the Tower of London, were distributed, that the match-lock and pistol found their way into the hands of the 'ordered musqueteers and dragoons' in the country parts; and even to the end of the civil wars, large bodies of men, besides the regular pike-men, were furnished only with rude lances; and, on the king's part, many thousands, particularly of the Welshmen, went to the battle with staves and Danish clubs. The conflicts which arose out of the meetings of parties acting under warrant to raise troops, and collect the other materials of war, gradually assumed the character of military skirmishes; and the towns, the high roads, and woods, through which the supplies had to pass, became daily, and in almost all parts of England, the scenes of encounters more or less obstinate and bloody. By degrees, as these parties grew larger in their numbers, and more confident in their strength, they issued out from the fortified towns to try their arms and spirit against bodies which they knew to be collecting in the neighbourhood, and to drive in cattle for the magazines which, in all parts, were in progress of being formed. As the summer advanced, the corn, still green, was reaped by working parties on each side, whether to swell with its unripe produce their own guarded granaries, or, as was oftener the case, for forage for their horses, or, oftenest, in order to take it from the reach of their enemies. This course had also the effect, in the neighbourhood of the cities, of obliging the country people to follow their food, and thus of enlisting themselves and increasing the garrisons. The history of these wars, as they proceeded, casts a peculiar interest on places, the names of which, as connected with the events of later times, carry with them no very lofty recollections. Even the small scale on which, throughout the civil wars, operations, insignificant in themselves but mighty in their consequences, were carried on, gives, at first hearing, a homely and contracted sound to the story of the contest. Thus, some men have made it matter of complaint, while traversing the plains and passes of Greece, that they have found that land, which has been made immortal by the warrior's sword, by the poet's song, by the gown of the orator, the statesman, and the philosopher, confined within such petty limits as those between the Egean Sea and the mountain boundary of her states. But this is an ill-considered feeling. What can more sustain the glory of that famous history than the reflection, how narrow the space in which the spirit of Freedom made good for ages her cause against the world?—No trifling cause of admiration, that the powerful lessons of liberty have sprung up into ripeness, and been reaped and stored up, even by other nations, from a germ like that of the Grecian republics, or the commonwealth of England. He who contemplates, without emotion, the victorious progress of mighty empires, may yet feel some enthusiasm when, standing in a rocky pass dark with pine and plane trees, or on a small sandy plain broken only by a few rude and shapeless hillocks, he is told,—'Here Grecian freedom died, to die, but not to be subdued: this is Themi-

pylæ;—here she triumphed,—you are among the graves of Marathon.' Then, though but the ploughman be seen on Chalgrove now,—though the names of Birmingham, and Coventry, and Gloucester, be no more known but by the peaceful contests of busy trade, with all its powers and all its enterprise,—though a few hours of journey suffice to carry us from the opening to the concluding scene,—from Oxford, where Charles held his court, to where last he grappled with his subjects at Naseby,—we may acknowledge, in even these names of familiar sound, the feelings which must ever attach themselves to places made memorable by bold endeavour or great achievement, by the acts, or by the fall, of men who have contributed to the fame of their native land."

[To be continued.]

Fisher's Drawing-Room Scrap-Book. With Poetical Illustrations, by L. E. L. 4to. London, 1831. Fisher.

WE had imagined that annual ingenuity was exhausted, and that nothing new could be devised to vary the beaten track; but here is not only a novel but a very delightful present for Christmas,—a most pleasant ornament for my lady's table, no matter in what room, be it boudoir or drawing-room, and an elegant offering to the fine arts and belles lettres. The publishers, who are so actively engaged on popular works, illustrated by engravings (such as Elliot's Views in the East, Sketches of Ireland, the National Portrait Gallery, &c. &c. &c.), having conceived the design of making a selection from these, fortunately obtained their illustration from the pen of L. E. L. Her sketches are brief,—compositions read in a few minutes; but some of them, we think, likely to leave a long impression upon the memory. Their variety is also strong proof of the exhaustless versatility of her genius. To sit down and write to a single picture is a task of no slight difficulty, as many who have tried well know; but to sit down to *thirty-six*, of all kinds and characters,—it takes away our breath to contemplate it. However, it has been admirably done, as our selections will shew; and we shall simply introduce them with the fair writer's own lively introduction.

"Though a preface be the first page seen in a volume, it is always the last page written. By that time, the golden age of hope has darkened into the iron age of fear. The ideas that seemed at first so delightful, are grown common, by passing through the familiarising process of writing, printing, and correcting. A proof-sheet is a terrible reality; and you look upon your work with much the same feeling as people look upon the prospect to which they are accustomed—they are much more alive to its faults than its beauties. For the volume now offered to the public, I must plead for indulgence. It is not an easy thing to write illustrations to prints, selected rather for their pictorial excellence than their poetic capabilities; and mere description is certainly not the most popular species of composition. I have endeavoured to give as much variety as possible, by the adoption of any legend, train of reflection, &c. which the subject could possibly suggest; and, with the same view, have inserted the two poems marked 'C,' for which I am indebted to a friend, whose kindness I gratefully acknowledge. A book like this is a literary luxury, addressed chiefly to a young and gentler class of readers: may I therefore hope, that the judgment I seek to interest will err on the side of kindly allowance. There are

three portraits, to which only brief prose notices are affixed—the days of poetical flattery are as much past as those of hoops and minuets. What the genius of Dryden could not redeem, I may be excused from even attempting. There is an old proverb, 'Leave well alone'; I shall, therefore, say little more of the embellishments than to mention, that the voluminous and expensive works from which they are selected, were 'fountains sealed' to the many. I need not entreat for the engravings that indulgence which myself required, but may trust them, as the Grecian orator did his client, to plead and win the cause by their own beauty."

We now come to this charming collection of plates, the title-page presenting a sweet medallion of the Princess Victoria, which is very fancifully illustrated by the author; but we pass to the "Pirate's Song off the Tiger Island," to illustrate one of Captain Elliot's most spirited drawings: what a multitude of images crowd the single page!

"Our prize is won, our chase is o'er,
Turn the vessel to the shore:
Place you rock so that the wind,
Like a prisoner, howl behind.
Which is darkest, wave or cloud?
One a grave, and one a shroud.
Though the thunder rend the sky,
Though the echoing wind reply,
Though the lightning sweep the seas,
We are used to nights like these.
Let it foam, the angry main,
Washing out the blood-red stain,
Which the evening conflict threw
O'er the waters bright and blue.
Though above the thunder break,
'Twill but drown our victims' shriek;
And the lightning's serpent coil
Will but glimmer o'er our spoil—
Maidens, in whose orient eyes
More than morning's sunshine lies;
Honour to the wind and waves
While they yield us such sweet daves—
Shawls, the richest of Cashmere,
Pearls from Oman's bay are here;
And Golconda's royal mine
Sends her diamonds here to shine.
Let the stars at midnight glow,
We have brighter stars below;
Leave the planet of the pole
Just to guide us to our goal,
We'd not change for heaven's own stars,
Yon glad heap of red dinars.
See the crimson silks unfold,
And the slender chains of gold,
Like the glittering curls descending,
When the bright one's head is bending,
And the radiant locks fall over
Or her mirror or her lover:
On which face she likes to dwell,
'Twere a prophetic task to tell.
All those crystal fountains
Sighs of the imprisoned rose,
And those porcelain urns are filled
By sweet Indian wood distilled;
And behold those fragrant piles,
Spice from the Manila Isles,
Nutmegs, cloves, and cinnamon—
But our glorious task is done.
Little dreamed the merchant's care
Who his precious freight should share:
Fill the wine-cup to the brim,
Our first health shall be to him."

How different is "Storrs," on the peaceful Lake of Windermere!

"I would I had a charmed bark,
To sail that lovely lake,
Nor should another prow but mine
Its silver silence wake;
No oar should cleave its sunny tide;
But I would float along,
As if the breath that filled my sail
Were but a murmured song.
Then I would think all pleasant thoughts,
Live early youth anew,
When hope took tones of prophecy,
And tones of music too,
And coloured life with its own hues—
The heart's true Claude Lorraine—
The rich, the warm, the beautiful,
I'd live them once again.
Kind faces flit before my eyes,
Sweet voices fill my soul,
And friends I long have ceased to love
I'll still think loved and here,
With such fair fantasies to fill,
Sweet lake, thy summer air,
If thy banks were not Paradise,
Yet should I dream they were."

"The calm and picturesque scenery of the Lake of Windermere might awake a thousand far more romantic visions than that of the return of the first warm feelings of youth. Shut out, as it were, from the world, and enshrined in delicious seclusion, here might the weary heart dream itself away, and find the freshness of the spring-time of the spirit return upon it. Here, at the mansion of Colonel John Bolton—a circumstance which gives interest to the plate—did the late Mr. Canning retire from the whirl of public affairs; and, to use the words of *Fisher's Illustrations of Lancashire*, 'here was restored, in some measure, the elasticity of a mind, whose lofty energies were ultimately, and for our country we may say prematurely, exhausted in the preservation of a nation's welfare.'"

But lakes furnish as different ideas and themes to the truly poetical mind as if they were in themselves totally dissimilar subjects. Thus our author treats the legend-crowned "Lake of Killarney."

"Why doth the maiden turn away
From voice so sweet, and words so dear?
Why doth the maiden turn away
When love and flattery woo her ear?
And rarely that enchanted strain
Whisper in woman's ear in vain.
Why doth the maiden leave the hall?
No face is fair as hers is fair,
No step has such a fairy fall,
No azure eyes like hers are there.
The maiden seeks her lonely bower,
Although her father's guests are met;
She knows it is the midnight hour,
She knows the first pale star is set,
And now the silver moon-beams wake
The spirits of the haunted lake.
The waves take rainbow hues, and now
The shining train are gliding by,
Their chieftain lifts his glorious brow,
The maiden meets his lingering eye.
The glittering shapes melt into night;
Another look, their chief is gone:
And chill and gray comes morning's light,
And clear and cold the lake flows on—
Close, close the casement, not for sleep—
Over such visions eyes but weep.
How many share such destiny—
How many, lured by fancy's beam,
Ask the impossible to be,
And pine, the victims of a dream!"

"The romantic story of Kate Kearney, 'who dwelt by the shore of Killarney,' is too well known to need repetition. She is said to have cherished a visionary passion for O'Donoghue, an enchanted chieftain who haunts those beautiful lakes, and to have died the victim 'of folly, of love, and of madness.'"

"Furness Abbey" is another touching production, simple and captivating.

"I wish for the days of the olden time,
When the hours were told by the abbey chime,
When the glorious stars look'd down through the mid-night dim.

Like approving saints, on the choir's sweet hymn—
I think of the days we are living now,
And I sigh for those of the veil and the vow.

I would be content alone to dwell
Where the ivy shut out the sun from my cell,
[Knee,
With the death's-head at my side, and the missal on my
Praying to that heaven which was opening to me:
Fevered and vain are the days I lead now,
And I sigh for those of the veil and the vow.

Silken broidery no more would I wear,
Nor golden combs in my golden hair;
I wore them but for one, and in vain they were worn—
My robe should be of serge, my crown of the thorn;
'Tis a cold false world we dwell in now,
And I sigh for the days of the veil and the vow.

I would that the cloister's quiet were mine;
In the silent depths of some holy shrine.
I would tell my blessed beads, and would weep away
From my inmost soul every stain of clay;
My heart's young hopes they have left me now,
And I sigh for the days of the veil and the vow."

The "City of Delhi" offers a subject of another description; but it is equally pleasing.

"Thou glorious city of the East, of old enchanted times,
When the fierce genius swayed all Oriental climes,
I do not ask from history a record of thy fame,
A fairy page has stamp'd for me thy consecrated name."

I read it when the crimson sky came reddening through the trees.

The twilight is the only time to read such tales as these; Like mosque, and minaret, and tower, the clouds were heaped on high—

I almost deem'd fair Delhi rose a city in the sky.

What sympathy I then bestow'd upon her youthful king! I fear I now should be less moved by actual suffering: All sorrow has its selfishness—tears harden as they flow, and in our own we half forget to share in others' woe.

I can recall how well I seem'd to know the princely tent, Where painted silk and painted plume their gorgeous colours blent, [stone, The conquests blazon'd on the walls, the roof of carved And the rich light that at midnight over the dark woods shone.

The lovely princess, she who slept in that black marble tomb,

Her only pall her raven hair, that swept in midnight The depths of that enchanted sleep had seem'd the sleep of death [breath.

Save that her cheek retain'd its rose, her lip its rose-like Gone! gone! I think of them no more, unless when they are brought,

As by this pictured city here, in some recalling thought— Far other dreams are with me now; and yet, amid their pain,

I wish I were content to dream of fairy tales again.

“Perhaps Sir Charles Morell, the real author of *The Tales of the Genii*, may be but an oriental Ossian; I only know, when reading them, I was truly ‘under the wand of the enchanter.’ The story of the ‘Sultan Mismar and the Enchanters’ is the one to which the above verses allude. The youthful monarch had enough to do; he had to rescue his throne from the usurpation of his brother, aided by the evil genii, and his mistress from an enchanted sleep in a tomb of black marble. If an author could choose his destiny, he would only implore fortune to grant him youthful readers. The vivid feeling and the rich imagination of the young lend their own freshness to the page; and then we look back with such delight to half-forgotten volumes, read beneath the old beech-tree, or in the oaken window-seat. What an Arabian poet says of those he loved in early days, I say too of all childhood's books, hopes, and feelings. The Arabian line runs thus:—

‘We never meet with friends like the friends of our Youth—when we have lost them.’

We will give another Indian subject.

“*The Grass-ropes Bridge at Toroe.*”

‘The English who have lost their health often resort to these hills for the hot season, where the air and exercise are sometimes as beneficial as the voyage to Europe.’ The following verses allude to the early death of a young friend, who, adopted by some distant relatives, accompanied them to India, and died in this very spot, whither she had been taken for the recovery of her health.

We had to watch the fading
Of that young and lovely cheek,
And that pale lip's mute upbraiding,
Which ask'd not sound to speak.

We saw that she was pining
For her own loved English land,
And her life's sweet light declining,
For she loathed our Indian strand.

Her heart was with her mother,
Far o'er the salt sea foam;
And she could not love another
As she loved her early home.

She clung with love too tender
To every former scene,
For one of eastern splendour
To be what they had been.

Alas! why did we bring her
To this golden land in vain?
Ah! would that we could wing her
To her native land again!

We never see her weeping,
But we know that she does weep;
And she names loved names in sleeping,
As she names them but in sleep.

We watch one bright spot burning
On her cheek of hectic red,
And we dread each day's returning,
Lest it rise but for the dead.”

But we must not be tempted into a wider field, even by our partiality for L. E. L., whose writings are so well calculated to excite generous feelings and admiration, instead of pro-

voking the petty carplings of miserable detraction;—and conclude with one poem upon a topic unusual to her, of great public interest, and upon a celebrated print—viz. that by Meyer, of a young girl teaching a Negro to pray.

“It was a king in Africa,
He had an only son;
And none of Europe's crowned kings
Could have a dearer one.

With good cane arrows five feet long,
And with a shining bow,
When but a boy, to the palm woods
Would that young hunter go.

And home he brought white ivory,
And many a spotted hide;
When leopards fierce and beautiful
Beneath his arrows died.

Around his arms, around his brow,
A shining bar was roll'd;
It was to mark his royal blood
He wore that bar of gold.

And often at his father's feet
The evening he would pass;
When, weary of the hunt, he lay
Upon the scented grass.

Alas! it was an evil day
When such a thing could be—
When strangers, pale and terrible,
Came o'er the distant sea.

They found the young prince mid the woods—
The palm woods deep and dark—
That day his lion hunt was done—
They bore him to their bark.

They bound him in a narrow hold,
With others of his kind—
For weeks did that accursed ship
Sail on before the wind.

Now shame upon the cruel wind,
And on the cruel sea,
That did not with some mighty storm
Set those poor captives free.

Or, shame to those weak thoughts, so fain
To have their willful way!
God knoweth what is best for all—
The winds and seas obey.

At length a lovely island rose
From out the ocean wave—
They took him to the market-place,
And sold him for a slave.

Some built them homes, and in the shade
Of flower'd and fragrant trees,
They half forgot the palm-hut huts
They left far o'er the seas.

But he was born of nobler blood,
And was of nobler kind;
And even unto death, his heart
For its own kindred pined.

There came to him a seraph child
With eyes of gentlest blue—
If there are angels in high heaven,
Earth has its angels too.

She cheer'd him with her holy words,
She soothed him with her tears;
And plyingly she spoke with him
Of home and early years.

And when his heart was all subdued
By kindness into love,
She taught him from this weary earth
To look in faith above.

She told him how the Saviour died
For man upon the tree;
‘He suffer'd,’ said the holy child,
‘For you as well as me.’

Sorrow and death have need of faith—
The African believed;
As rains fall fertile on the earth,
Those words his soul received.

He died in hope, as only those
Who die in Christ depart—
One blessed name within his lips,
One hope within his heart.”

We add no comment; the purity, the piety, and the poetical beauty of this poem alone ought to recommend the volume, of which it forms only a small portion.

The Life of Frederic II. King of Prussia.
2 vols. 8vo. London, 1832. Longman and Co.

WE are again indebted to Lord Dover for an interesting historical episode, respecting which we cannot do better, in the first instance, than quote from the preface. “The following pages have occupied the author of them for some time, and have extended to a greater length than he

originally intended; partly from abundance of materials, and partly from a wish on his part, having once commenced the work, to do justice to his subject. He was originally induced to undertake the task, by a feeling, that a *Life of Frederic the Second*, which should collect under one view the authentic, yet scattered, accounts of that extraordinary man, was a desideratum in history and literature.”

The noble author's industry has not been thrown away, for its result is a most delightful and comprehensive work. We select some amusing passages in the intercourse of Frederic with Voltaire. Correction of Frederic's works.

“One of his corrections, which may give a notion of the style of the others, is as follows: In one of his *‘épîtres familières,’* Frederic makes use of the word *plats* several times in the course of a few lines. Voltaire draws a line under the word whenever it occurs, and then puts in the margin, ‘*plats—plats—plats—voilà assez de plats pour un bon souper!*’ To make up for the freedom of such marginal annotations as these, great praise of the royal author occasionally appears. At the end of one of Frederic's letters in the same book, we find the following words in Voltaire's handwriting: ‘*Que d'esprit, de graces, d'imagination! Qu'il est doux de vivre aux pieds d'un tel homme!*’

“Among the advantages which were to accrue to Voltaire, in consequence of his residence in the palace of the King of Prussia, was the being supplied with tea, coffee, chocolate, sugar, &c. Those, however, whose duty it was to furnish him with these articles, usually sent him very bad ones. Voltaire complained of this to the king, who promised to have it remedied. The evil, however, continuing, and Voltaire again complaining, the king, in a jocular tone, told him, that as he saw that his anxiety respecting these trifles diverted his mind from the sublime studies in which he was engaged, he would give orders that he should no longer be troubled with them; and accordingly ordered these perquisites to be suppressed. The conclusion which the king thus unexpectedly came to, astonished and enraged the poet; and determined him to make up, by his own contrivances, for the advantages of which he had been deprived. With this view, he was accustomed to sell the allowance of wax candles which was still made to him, and to supply their place by the following ingenious manœuvre. While passing the evenings with the king in his apartment, he was accustomed to take opportunities of retiring to his own room; and each time that he did so, he armed himself with one of the large wax candles, which lighted the king's rooms, which he never brought back with him.”

“Upon one occasion, when Frederic thought he had more reason than usual to be displeased with Voltaire, he wrote to him a reproachful note, which concluded with these severe words: ‘You have a heart a hundred times more horrible than your genius is beautiful.’ He sent this note from his own apartment to that of Voltaire by a page. When Voltaire had read it, his rage knew no bounds. He applied to the king every odious epithet he could think of: at the same time making the most virulent charges against him. All this, with a loud and angry voice, while striding about his room, and shewing symptoms of extreme agitation. The poor page, who was waiting for his answer, was frightened beyond measure, and endeavoured to arrest his course, by saying to him, ‘Sir, recollect yourself, and reflect that he is a king: that you are in his house; and that I, who

listen to you, am in his service.' These words had an instantaneous effect upon Voltaire, though without apparently calming his violence; but he seized the page by the arm and cried out, 'It is you, sir, that I take as the judge between him and me. I defy you to discover any fault I have committed towards him. I have committed one, it is true, and it is an irreparable one: it is that of having taught him to make verses better than I can myself. Go, sir, and take him this answer!' The page went up stairs again to the king, whom he found walking about his room, and waiting impatiently for the answer. 'Have you delivered my note?' cried the king, as soon as he saw him. 'Yes, sire.' 'Did you deliver it to M. de Voltaire himself?' 'Yes, sire.' 'Did he read it before you?' 'Yes, sire.' 'What did he say and do, after having read it?' To this question the terrified page returned no answer. 'I ask you what M. de Voltaire said, when he had read my note?' Still the page continued silent. 'Take care of yourself, sir,' continued the angry monarch; 'I am determined to know what he said and did. There, speak! I command you.' The page, now more frightened than ever, began to tell his tale, stopping between almost every word, and not daring to lift his eyes to the king, who, as the relation proceeded, became every instant more agitated and more angry. But the exaggerated compliments to his own verses, which concluded the communication, restored him at once to calmness; and, when the page had finished, he only shrugged his shoulders, and said, 'He is certainly mad!'

We add one or two personal anecdotes of Frederic.

"One evening, after a great battle, Frederic approached a fire, which had been lighted by some of the grenadiers of his own regiment. The soldiers began to ask him where he had been during the battle. 'Generally,' said they, 'you lead us yourself where the fire is hottest; but this time nobody saw you, and it is not right to abandon us so.' The king, in a good-humoured manner, explained to them in what part of the field he had been, and his reasons for being there, which had prevented him from being at the head of his own regiment. As he began to grow warm, he unbuttoned his great-coat, and a ball dropped out, which he had received in his clothes. The hole the ball had made in the great-coat and coat was also perceptible. Upon this, the enthusiasm of the soldiers knew no bounds. They cried out, with all the tenderness of expression belonging in the German tongue to the singular pronoun, 'You are our own good old Fritz; you share in all our dangers with us: we will all die for you!' And the conversation concluded with their cheers, and their entreaties to the king to take more care of his own safety."

Death of Prince Henry.—"The king was peculiarly attached to this prince, on whose rising talents and good qualities he dwelt with fond affection. His death was a grievous blow to his royal uncle, who, upon this occasion, shewed more deep feeling than he was generally supposed to be possessed of. He had determined to consecrate to his memory a eulogy, which was afterwards read at a meeting of the academy; and, as was common to him upon such occasions, he sent for the Professor Thiebault to copy and correct it. When Thiebault arrived, the king received him with a countenance of deep melancholy, but, at the same time, with the air of a man who was determined to master his feelings. In this he, to a certain degree, succeeded, while he detailed

his reason for sending for him; but when he attempted to read the composition to Thiebault, his voice faltered. He had hardly got to the fourth page, before his grief became ungovernable. He burst into a flood of tears, and covering his face with his hands, held out the manuscript to Thiebault, without being able to utter a single word. 'I took the papers,' says that writer, 'contemplating with respect and a sort of consolation this great man, who thus proved himself as accessible as the rest of mankind to affections the most touching and the most dear to human nature.' After a pause of some minutes, Frederic ejaculated with difficulty, 'You understand what I wish you to do. Good night.' And thus concluded this interview, so honourable to the heart of Frederic; and from which Thiebault came away with an increased veneration for that monarch, bottomed upon his conviction of the sincerity of the feelings which he had displayed, and of his anxious wish, had it been possible for him to have done so, to have concealed them."

The Prussian princesses.

"The object of the Swedish ambassador, who was sent to Berlin to negotiate a marriage with a princess of the house of Prussia, was to obtain the hand of the Princess Amelia for the Prince of Sweden. That princess was strongly imbued with feelings of attachment for the religious tenets in which she had been educated, which were those of the Calvinists. She regarded with horror the change from Calvinist to Lutheran, which would have been necessary had she accepted the hand of the heir to the throne of Sweden. In this dilemma she opened her heart to her sister Ulrica, and demanded her advice to enable her to avoid the marriage. The Princess Ulrica, having first ascertained the fixed determination of her sister never to consent to the condition of changing her religion, counselled her to make herself as disagreeable as she possibly could to the Swedish envoy; to shew the greatest haughtiness when in his presence; to treat him herself with contempt; and to endeavour to appear as capricious and as domineering as possible. This conduct, which the Princess Amelia pursued, had the desired effect. The Swede turned from her, and began to observe the Princess Ulrica, whose conversation and manners presented the most studied contrast to those of her sister. At length, he demanded the hand of the Princess Ulrica for the Prince of Sweden. His offer was immediately accepted by Frederic, and with equal readiness by the princess herself. This acceptance, on the part of Ulrica, astonished and irritated Amelia. She thought her sister had deceived her, and that she had given her the advice, which she had acted upon, in order to secure for herself the station which had been destined for another. Though the Princess Ulrica seems really to have acted with fairness in this transaction, her sister never forgave her; and it was while smarting under the feelings of humiliation and vexation at the treachery, which she thought had been practised upon her, that she first regarded Trenck with the eye of favour. Her state of mind rendered her peculiarly susceptible of feelings, to which she turned both for consolation and vengeance. It was, as has been previously mentioned, at one of the fêtes for the marriage of the Princess Ulrica, that the intimacy between Trenck and the Princess Amelia commenced, which ended so fatally for both. Upon Trenck it brought a long and most cruel imprisonment, and upon his royal mistress evils of a still more dreadful kind. The Princess Amelia appears to have been endowed by nature with personal beauty,

with abilities, and with the gift and the wish to please. Shortly after her separation from her lover, she became suddenly and prematurely old and decrepit. Her beauty gave place to wrinkles; she was almost blind; her limbs were paralytic; and her utterance became so much embarrassed, that it was with difficulty she could be understood; her head shook violently; and her legs could not support her body. Her mind also became as much altered as her person. Instead of being the life of society, from the graces and amenities of her disposition, she became solitary in her habits, and bitter in her temper; always decrying others, and always rejoicing in the calamities which befell them. With regard to her bodily infirmities, she is supposed, by taking poisonous drugs, and other means, to have inflicted them upon herself, in the perverseness of despair at her own sad fate. It is related, that her eyes being weak, her physician advised her to hold them over the steam of a very powerful liquid, but to take especial care, at the same time, not to approach the liquid to her eyes. Instead of attending to these instructions, she rubbed her eyes violently with it; and the consequence was, that almost total blindness ensued, and that her eyes ever afterwards had a most distorted appearance, and as if they were actually starting out of her head. She lived in this wretched state for many years, and died shortly after her brother Frederic, who always shewed her a much greater degree of attention, and even of fondness, than he was accustomed to bestow upon the rest of his family."

Judicious in selection, intelligent in arrangement, and graceful in style, these attractive volumes well deserve the pains bestowed on their completion by their accomplished author. We think the *Life of Frederic* will meet, and we are sure that it deserves, a high place in public favour.

Lives of the Italian Poets. By Henry Stebbing, M.A. Second edition. 3 vols. 12mo. London, 1832. Bull.

WE are glad to see the cordial praise bestowed on this work confirmed by the public favour, which has carried it into a second edition. Mr. Stebbing has made many interesting additions, some of which—from his touching memoir of the unfortunate Foscolo—we shall transcribe to our pages.

Love affair:—

"Foscolo now enjoyed all the flattering attentions of a popular author, and was, it appears, soon involved in a new affair of the heart. The object of this passion is said to have been a daughter of the identical Marchioness whom Sterne encountered at Milan. From some cause or other, however, the lady proved unfaithful; and after regarding him with complacency till she had made sure of his affection, dismissed him from her thoughts. Signor Pecchio says that he was some years after walking with Foscolo, when the lady alluded to passed them in her carriage, and that he had the curiosity to ask him if he knew whether she who had a countenance so full of expression, had ever herself felt the passion with which she knew so well how to inspire others. The answer was in keeping with the usual tone of Foscolo's language when somewhat irritated—'I believe not,' he said; 'she has a heart made of brains!'

Instances of his eccentricity:—

"I am told that he was once dining at the table of a distinguished nobleman, when some person present, whose principles were widely opposite to his own, ventured to make remarks

which he conceived derogatory to the honour of Italy. He did not conceal his emotion, but replied with all the force of his stentorian eloquence. The spirit of refined society quickly yielded to the indignation of the patriot, and grasping the table-cloth with both his hands, he went on, increasing in energy as he proceeded, till at last, his adversary having made a remark which added more fuel to the flame, he jumped up, and still grasping the table-cloth, drew, to the infinite consternation of the guests, most of the dishes into their laps. It may be as well, perhaps, to mention here, that he was not less ready to say what he felt than quietly chatting with his acquaintances, if he chanced not to be in a remarkably forbearing humour, than when provoked to do so on some great occasion. A friend of mine, for whom he in reality felt considerable esteem, happened to be sitting alone with him one day, conversing on a variety of topics, when the discourse took a turn which tempted my friend to dilate at length, and with great gravity, on some point in philosophy. Foscolo listened to him a long while, but at last, without saying a word, he rose, rang the bell for the servant, and on her appearance quietly told her to request her mistress to come up stairs. The lady obeyed, and he desired, in a supplicatory tone, that she would sit down and talk with his friend, for that he had quite tired him with his absurdities. Many instances of his intemperate passion have also been told me by Mr. Redding and other gentlemen, who were in the habit of engaging with him at chess. He was remarkably fond of that game; but such was his rage whenever his adversary made a very successful move, that he would start from his seat, and, gnashing his teeth, pull up his hair in large quantities by the roots. It mattered little where he might be when his anger was thus roused. A gentleman, who was in the habit of playing with him in his own house, has told me that he always took the precaution of running to the opposite side of the room before he proclaimed check-mate. On the other hand, it is generally known to his acquaintances, that being irritated in a similar manner one evening, when playing at the house of a nobleman, he started up, and, before the whole company, challenged his astonished opponent to a rencontre of a different kind.

"At the period of which I am speaking, he occupied one of the Alpha cottages near the Regent's Canal; but he soon resolved upon establishing himself in a house better suited to his taste; and as one was not to be found of this character already built, his next determination was to build one for himself. A piece of ground adjoining the cottage he occupied was accordingly purchased, and there he had soon the pleasure of seeing his various little plans executed with all the speed and skillfulness of English ingenuity. The house was built in the style of a Venetian villa, and was named by its possessor the Digamma Cottage, in commemoration of the credit he had obtained by his remarks in the *Quarterly Review* on that controverted point of classical criticism, the origin of the digamma. So far as the purchase of the ground, and the simple erection of the building were concerned, Foscolo might have anticipated his income in a much worse manner; but this was only the commencement of his plans: the cottage had to be furnished, and cabinet-makers and upholsterers were applied to, with little regard to what would be the extent of their bills. He seems to have conceived that his talents would always command as much money as he required, and that

he had but to make himself happy, and delight his mind with the elegancies of life, to convert every thought he possessed into an ingot of gold.

"At the period of which we are speaking, he was in tolerable employment. He wrote for the *Quarterly* and *Edinburgh Reviews*, and the encouragement given to his excellent essays on Petrarch served to increase simultaneously his means and his expectations. So extensive were his designs, that he found constant employment for some young men of ability to translate or improve his language; and it was with one of these, Mr. Graham, that he was guilty of the folly of fighting a duel, on account of his favourite servant. But a casual observer might have supposed that he was rapidly advancing in fortune. The establishment he kept up was one which would have swallowed up a revenue far greater than that which he could ever hope to command, had all his designs been completed and crowned with success. His debts, consequently, were always on the increase; and as a large part of his upholsterers' bills remained unpaid, he was soon involved in difficulties which rendered ruin inevitable. To accelerate the approaches of distress, his mind was at times too much oppressed with anxiety to allow of its free action; and thus the great wheel of the machine on which his whole subsistence depended soon grew unfit for use. The importunities of his creditors were at first borne with tolerable patience; the confidence he felt in the powers of his genius, and the unwillingness with which minds such as his yield to mere pecuniary distress, kept him from perceiving the whole extent of his difficulties. He was annoyed, but he was not as yet wise enough to acknowledge to himself that he had entered on a plan of life far different to that which his means authorised; and he went struggling on till his promises and excuses no longer availed him with those who had demands on his purse. On the first extreme pressure of distress he had recourse to his friends, and the aid they afforded him delayed for a brief period the progress of his disasters. But he was now in reality in a far worse situation than before—he had commenced a practice which hurt his independence, and which contributed still further to deceive him as to the nature of his difficulties. A small sum was not sufficient to render him any effectual aid; but however small the sum borrowed, it is sufficient to make a man of delicate and independent mind feel uneasy. And no one can doubt that Foscolo felt this; but he never thought of anticipating any difficulty, and generally, therefore, he had no other alternative but that of yielding to it or asking help of some of his acquaintances. At length an execution was placed on his premises, and he then appears to have resigned himself to despair. A gentleman, whose name I am not at liberty to mention, received a message from him late one evening, intimating the circumstance, and fully expressive of the misery of the writer. The call was promptly attended to; but on the gentleman's arrival at the cottage he was informed that Foscolo had retired to his apartment. He hastened to the room, and gaining admission with some difficulty, he discovered on the table near which the poet was seated, a little dagger, which Foscolo always carried in his bosom, but only displayed on great occasions. After a slight inquiry, therefore, into the cause of his present distress, he settled the demand of the person who had placed the execution in the house, and Foscolo was once more at ease. I am indebted to the kindness of

Mr. S. C. Hall, who went to reside with him about this time as his secretary, for the knowledge of many particulars which respect the state of his mind under these distressing circumstances. He now began, it seems, to experience the most terrible fits of despondency. 'He would sometimes ask me to pass the evening with him,' says the gentleman above named; 'but in the midst of our conversation he would cease speaking, and sit for a couple of hours wrapped in the most gloomy silence.' This, however, was not the only sign which he gave of the miserable state of his thoughts. Mr. Hall, who lived in the small house next the Digamma Cottage, and which Foscolo retained in his hands, was startled by seeing him enter his apartment one afternoon with a worse than ordinary gloom upon his brow. 'Mr. Hall,' he began, 'I am come to see you for the last time. In two hours I shall be no more. When I was still a youth, Mr. Hall, I was numbered among the great men of my country—I was even called the first of poets when there was no hair upon my chin. Alfieri, Monti, and the rest, all either feared or envied me; and I was on distinguishing myself, till even Buonaparte himself trembled before me. And now what am I? A poor, miserable exile! My countrymen abuse me because I do not help them; and here I am myself without friends, and without one shilling in my pocket! I must sacrifice either my honour or my life; and I will therefore die!' Having said this, he left Mr. Hall to his uncomfortable ruminations; but the next morning he made him another visit, and laughed and chatted as if he had no recollection whatever of the part he had acted the preceding afternoon. On another occasion, however, he addressed him in a similar manner.—'I will die,' said he; 'for I am a stranger, and have no friends!' 'But surely, sir,' was the answer, 'a stranger may have friends.' 'Friends!?' he exclaimed, 'I have learnt that there is no meaning in the word. I assure you I called on the editor of the —, to learn if there had been any thing about me in the newspapers; for every body seems leagued against me, and leaving nothing undone to plague me. I assure you I do not think I will live after next Saturday, unless there be some change.'"

What a pitiable picture of at once human strength and human weakness!—Full of generally interesting information elegantly communicated, we again cordially recommend these volumes to public favour: they do credit both to the feeling and the industry of their author.

The Mechanism of the Heavens. By Mrs. Somerville. 8vo. pp. 623. London, 1831. Murray.

WE opened this book with no inconsiderable apprehensions for the reputation—we mean the scientific and literary reputation—of the author; for although Mrs. Somerville has not been considered, by persons acquainted with such subjects, as one of the most accomplished and most highly informed mathematicians of the day, no public evidence, antecedent to the appearance of this work, had been afforded of the correctness of this very high praise. We felt, therefore, the deepest interest in the result of the gigantic experiment our countrywoman undertook to perform, which was no less than to give to the world a succinct, profound, but at the same time, as popular a view as possible of the great La Place's *Mécanique Céleste*.

A mere translation of that work would itself have been a formidable task; and we may remark, by the way, that the distinguished

American mathematician, Bowditch, has already given to the world a portion of a translation, illustrated by copious notes, which cannot fail to be of the highest value to the student in those intricate pursuits. Mrs. Somerville's object, however, was of a different order, and one more consonant to the boldness and vigour of an original thinker, conscious of adequate powers to invest even the most abstruse topic with the virgin interest which true genius alone can create. She saw that La Place's book was sealed to all who were not in familiar possession of that marvellous language in which his history of the heavens is exclusively written, and without which familiar acquaintance, the study became one of almost hopeless labour. Mrs. Somerville had fortunately obtained not only all the requisite knowledge to understand La Place's exposition of the subject, but believed that she could facilitate its acquisition by others; and she conceived the energetic and public-spirited idea of acting as interpreter between the great continental successor of Newton and the less-instructed mathematicians, astronomers, and, we may add, general readers of her native country.

From the dedication, which we have much pleasure in stating is addressed, with singular taste and propriety, to Lord Brougham, it appears that we are indebted to the sagacity of this extraordinary person for having first suggested the undertaking, and to his great influence afterwards in securing its accomplishment. His lordship, it seems, wished to embody La Place's work in the publications of the Society for the Diffusion of Useful Knowledge; but, as may readily be supposed, Mrs. Somerville could not accomplish this purpose. Now, however, that the first grand step has been made towards giving a popular character to the highest flights of astronomical knowledge, we believe the object which the lord chancellor had in view no longer impossible, but only under one condition of the problem, namely, that the master-hand which originally gave the impulse shall undertake its completion.

It would be quite foreign to the purposes and habits of our Journal to give even the slightest sketch of the work before us; in fact, as the author says in her introduction, "To accomplish the task of giving an account of the *Mécanique Céleste* without having recourse to the higher branches of mathematics is impossible;" and as we cannot pretend to have time (although, of course, we have the knowledge) to do the topic justice, we shall spare our readers the shock of a whole army of figures and symbols, with which we might cover our pages, if we were disposed to shew off our learning. As we despise such ostentation, for reasons best known to ourselves, we shall rest content with alluding to the most obvious distinction between this work and its great original, and then advert to the strictly popular branch of the undertaking.

"Diagrams," says Mrs. Somerville, "are not used in La Place's works, being unnecessary to those versed in analysis: some, however, will be occasionally introduced for the convenience of the reader."

We do not know what meaning others may attach to the word occasionally, but to us it gave no idea of the extent of the assistance which this departure from the plan of La Place is calculated to afford. Of course, this is not done throughout; for although, as our author says, "many subjects admit of geometrical demonstration, yet the object of the work being rather to give the spirit of La Place's method, than to pursue a regular system of demon-

stration, it would be a deviation from the unity of his plan to adopt it in this."

For all this, we have good authority for saying, that the student who really wishes to understand the mechanism of the heavens as developed in that splendid work, will here discover, by this and other aids furnished by Mrs. Somerville, the readiest means that are possible of acquiring that knowledge. Our author well characterises La Place's work as the resolution of "a great problem in dynamics, wherein it is required to deduce all the phenomena of the solar system from the abstract laws of motion, and to confirm the truth of those laws by comparing theory with observation."

Still, however, had Mrs. Somerville confined herself to the mighty task just described, and which she has executed with a degree of address every way worthy of her principal, she would have fallen short of our wishes. We should have felt greatly disappointed, indeed, if she had not condescended to give the host of general readers some conception of the wonders concealed from their sight under the mystic garb of the differential calculus. With great good sense, therefore, and no small kindness, Mrs. Somerville has given all that we could have desired, in a preliminary dissertation, which, independently of its own intrinsic excellence, cannot fail to stimulate many readers to pursue for themselves the investigation of the phenomena it describes.

We possess already innumerable discourses on astronomy, in which the wonders of the heavens and their laws are treated of; but we can say most conscientiously, that we are acquainted with none—not even La Place's own beautiful *exposé* in his *Système du Monde*—in which all that is essentially interesting in the motions and laws of the celestial bodies, or which is capable of popular enunciation, is so admirably, so graphically, or we may add, so unaffectedly and simply placed before us. The style is luminous and precise throughout, totally without ambition, either in thought or expression, and untouched by any depreciating apologies as to the execution, or marred by any feebleness in the design. We see nothing of the author, and think only of the subject; and it is quite clear, from the strongest possible internal evidence, that while she was penning this dissertation, a single thought of self never once crossed her mind. She felt—she must have felt—perfectly competent to treat the subject as it ought to be treated; and under this conviction, gave almost spontaneous currency to her knowledge. That such perfection in style is the result of labour, at some time or other, we hold to be quite as certain as any proposition demonstrated in this book; but we are also quite sure, that the ease, vigour, and clearness, throughout such a dissertation as this, can spring only from the completest familiarity with the subject in all its bearings, chastened by the single-hearted purpose of telling what is to be told in the plainest and most acceptable language.

Is it asking too much of Mrs. Somerville to express a hope that she will allow this beautiful preliminary dissertation to be printed separately, for the delight and instruction of thousands of readers, young and old, who cannot understand, or who are too indolent to apply themselves to the more elaborate parts of the work? If she will do this, we hereby promise to exert our best endeavours to make its merits known. At present we have left ourselves no space to enter into the analysis we shall be delighted to be again called upon to undertake; and we can only repeat, that we are not ac-

quainted with any account of the celestial movements which is at once so complete in all its parts, and yet so judiciously condensed. Indeed, when we came to the conclusion, we felt only regret that our intellectual feast was so short: but on reading it again, we discovered much more matter for careful reflection than we had discovered when hurried along by the witchery of the style, or seduced into new curiosity by the evergreen freshness of this delicious subject. For of astronomy it may be more truly said, than almost of any other science, that the further we advance, the greater is our desire to proceed. In this pursuit every thing is pure, serene, certain. It is truly the "image of eternity, the throne of the invisible," that we are then contemplating; and the mind which is not raised by such contemplation above the selfish objects and angry passions of this earth, must be gross indeed. But we must not forget that it involves still higher and more important considerations, by teaching us at once the wisdom, the power, and the beneficence of God, the Creator of all these things. And it must go hard indeed with our hearts if they be not touched by these important proofs of the Divine goodness to the creatures he has placed on one of the smallest of the countless myriads of orbs he has set in motion.

The following passage, with which we shall conclude this notice, is a good specimen of our fair author's style, and is much in point.

"The heavens afford the most sublime subject of study which can be derived from science: the magnitude and splendour of the objects, the inconceivable rapidity with which they move, and the enormous distances between them, impress the mind with some notion of the energy that maintains them in their motions, with a durability to which we can see no limits. Equally conspicuous is the goodness of the great First Cause in having endowed man with faculties by which he can not only appreciate the magnificence of his works, but trace with precision the operation of his laws, use the globe he inhabits as a base whereon to measure the magnitude and distance of the sun and planets, and make the diameter of the earth's orbit the first step of a scale by which he may ascend to the starry firmament. Such pursuits, while they ennoble the mind, at the same time inculcate humility, by shewing that there is a barrier, which no energy, mental or physical, can ever enable us to pass: that however profoundly we may penetrate the depths of space, there still remain innumerable systems, compared with which those that seem so mighty to us must dwindle into insignificance, or even become invisible; and that not only man, but the globe he inhabits, nay the whole system of which it forms so small a part, might be annihilated, and its extinction be unperceived in the immensity of creation."

The Excitement, &c. for 1832. 12mo. pp. 391. Edinburgh, Waugh and Innes; Dublin, Curry, jun. and Co.; London, Treacher and Co.

THIS northern Annual, calculated, by stirring stories, to awaken youthful and indolent minds to the beauties of literature and instruction, consists this year of a very various selection from numerous interesting works. It also offers us several original pieces, of which we copy two as examples of the whole.

"A singular Case of Presentiment by an Officer of the British Army.—On the 8th of March, 1801, the British army, under the command of Sir Ralph Abercromby, landed in Egypt, and defeated the French troops, who

fled towards Alexandria. This was previous to that memorable occasion on which the gallant commander-in-chief received his mortal wound, which created so powerful a sensation in the British army, as that event occurred on the 21st. On this occasion, Lieut. O., of the — regiment, lost his cloak; consequently shared, during the bivouac of the following days and nights, my cloak, as his brother lieutenant. On the night of the 11th, orders were received for the attack of the French troops on the following morning. In the middle of the night, Lieut. O. awoke me, and said, 'Well, I know I shall fall to-morrow; but you will not be hurt, though you will have a close shave or two,' or words to that effect. 'But,' he added, 'I am sure poor T. will be severely wounded.' I tried to divert his mind, and begged him to be still, and try to get a little sleep, as we should probably have sharp enough work in the morning, and we should be the better of a little rest. He still persisted, however, in declaring his conviction that he would fall, and gave me particular directions regarding his writing-desk, and some little property he had. His writing-desk was aboard one of the vessels; and he particularly requested that I would see it thrown overboard, and sunk in the sea, without opening it. This request I assured him should be attended to; and though I could not see it accomplished myself, his friend, Lieut. T., who was carried aboard the vessel, saw it carried into effect.* Next morning we were pretty early called into action. The French were completely beaten, and poor Lieut. O. was killed by a cannon shot, in the early part of the action. His friend T., who he foretold would be badly wounded, lost an arm. I myself, though I escaped unhurt, had my sword carried away by a shot from the same guns by one of which poor Lieut. O. fell. In this way, every circumstance that had been impressed on his mind on the preceding night actually took place, and I had the mournful office of complying with his request, in seeing that his writing-desk, without its being opened, should be sunk in the deep."*

"*Singular Instinct of a Pelican.* — When the — regiment was returning from the expedition to Egypt under the lamented and gallant Abercromby, there accompanied it a tame pelican, which had been taken in Egypt with a broken wing, and which wing had been amputated by the surgeon. It so happened, that while it was on board of ship, the other wing was broken also, and it had to undergo the same operation. Severe as this operation was, however, the bird recovered, but always appeared alarmed when the surgeon came near him, though perfectly familiar and at ease with the rest of his fellow-passengers, both those of the regiment and the ship's company, — taking fish and other food, with great familiarity, out of their hands. One day, however, he appeared very uneasy, and certainly ill; so much so, that all thought he was dying; when, with the fine point at the end of his huge bill, he opened a vein under the stump of one of his wings, and thus let himself bleed. After this, he soon recovered, and was brought to Scotland by the officer to whom he belonged. This singular bird was well known to many gentlemen and ladies in Edinburgh and the neighbourhood, having attached itself to the lady of the house, and particularly to the cook, both of whom it would follow like a dog. But, it was observed, it was particularly afraid of going into the water, aware, probably, that, by the

loss of its wings, it had lost its balance, which is so necessary to birds, both on the water and on the wing."

The whole of the volume is entertaining, and full of marvels of every kind, which well justify its name of the *Excitement*, and recommend it fully to the same share of popularity which has been enjoyed by its two predecessors of 1830 and 1831.

The French Poetical Gift; or, Cours Élémentaire de Littérature, from Malherbe to Voltaire. With English Notes by G. L. G. le Normand de l'Osier, &c.; edited by M. L. Fenwick de Porquet. Pp. 211. London, 1831. Fenwick de Porquet and Cooper.

THIS is a very pretty little volume, containing some judicious selections of French poetry, a portrait of Malherbe, and a critical introduction. It will be a nice Christmas present for our young friends. We have been amused by the fancy of putting an English title-page to a book entirely in the French tongue.

Family Library of French Classics. Œuvres de Racine, Tome V. Œuvres de Voltaire, Tome II. Paris et Londres, 1831. Treuttel et Würtz.

WE have again to repeat our warm commendations of this edition: it is neat, cheap, and complete.

Lodge's Peerage of the British Empire. Post 8vo. pp. 491. London, 1831. Saunders and Outley.

Lodge's Genealogy of the British Peerage. Post 8vo. pp. 410; and the arms engraved. Same publishers.

WE have to-day merely time to notice the appearance of these handsome volumes, also deriving value from the high authority of the name of Lodge in the title-page. But what we most approve, at a hasty glance, is the separation of the genealogies from, may we say, the *account current* and fluctuation of the peerage; the former remaining unalterable, and the latter, as new editions are hereafter called for, not being encumbered with the reprint, and consequent expense, of settled matter. The plan is excellent, and the work brought down to the last creation of peers.

The Family Library, No. XXVI. Sketch of the Reformation in England. By the Rev. I. J. Blunt. London, 1832. J. Murray.

THIS is an excellent subject, either for a single small volume or for a far more elaborate work. The importance of the reformation to religion, politics, and literature, must render a view of that great event interesting at all times; and though we have not been able as yet to qualify ourselves to speak critically of Mr. Blunt's performance, we can say that our general impression is favourable. There is a peculiarity—a quaintness indeed, about the style which has rather pleased our fancy; and the principles of the author seem to be truly orthodox.

Roscoe's Novelist's Library. Vol. VI. London, Cochrane and Co.

THE second volume of *Tom Jones*, capitally illustrated by G. Cruikshank, carries on the process of this series with undiminished spirit. The frontispiece is remarkable for strength and diversity of character in nearly twenty figures; and Squire Western and his lady cousins an excellent sketch.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

ON Wednesday week only one report in the mechanical department was brought before the Society, on a method of taking angles. The proceedings altogether possessed little public interest.

The Society ordered a set of Barry's splendid etchings to be presented to his Royal Highness the Duke of Sussex. Communications on a fire-escape, on an instrument for drawing spiral lines or volutes of various forms, &c. &c. were read.

Nothing of importance occurred at the meeting of this week.

ROYAL GEOGRAPHICAL SOCIETY.

DEC. 12th. — W. R. Hamilton, Esq. in the chair. A very interesting communication was read, addressed to the Society by M. Douville, a French gentleman lately returned from South Africa; and who appears to have made an extraordinary and most successful journey into the interior of that country, behind the Portuguese settlements on the Congo, or Zaire.

M. Douville landed first at Benguela, in 1827, but shortly afterwards proceeded to Landano, and thence to the mouth of the river Bengo, or Zenza; the latter being the proper name, and the former only known to the Portuguese quite at its mouth. From this point he proceeded in a direction nearly east, examining the districts of Bengo, Icolo, Golungo, and Dembos, the latter an object of especial dread both to the natives of the adjoining provinces and to the Portuguese themselves, in consequence of a remarkable echo that repeats the peals of thunder which, in the stormy season, are almost incessant, so as to produce a truly awful detonation. And here the traveller's constitution first sunk under the fatigue and exposure to which he was subjected, and he was long detained by severe illness. His wife, also, who accompanied him, was here severely ill; but with a courage which deserved greater success — for ultimately she died in the country — she persisted in continuing the dangerous route.

The next provinces which M. Douville examined were those of Ambacca and Pungo Andongo, the geological formation of which he describes as extraordinarily rent and torn by volcanic action, now extinct. And thence he turned directly south through Haoo, Tamia, and Bailundo, independent provinces, occupied by a fierce, warlike people, from whom, however, he met with little molestation. He states, indeed, that almost every where he was beset and less obstructed in the independent, and, as they are called, savage districts, than in the Portuguese; the authorities in which he was uniformly jealous of him; while the bearers and guides whom he was enabled to procure from them were at the same time weaker, less enterprising, and less to be depended on in almost every particular.

From Bailundo, M. Douville was obliged to return to Benguela; but, after a very short repose he again set forth, and proceeding S.E. first traversed the province of Nano, and thence arrived at Bihé, situate in 13° 37' south latitude, and 20° 14' east longitude from London. The general elevation of this country is considerable, being about 7000 feet above the level of the sea; all its rivers are rapid, and make a very loud noise in their beds; and a great variety of curious and previously unknown plants are found in it. M. Douville has brought back

* These passages seem to be contradictory. — Ed. L. G.

FINE ARTS.

ROYAL ACADEMY.

It is with peculiar satisfaction that we have to notice the award of the gold medal to Mr. M'Clise, given by the Royal Academy every three years. This medal is not only an honourable distinction, but is accompanied by solid pecuniary advantages.

Upon no student of the Academy could this reward of "talent and industry," to use the words of the president, have been, in our opinion, with more propriety bestowed than upon Mr. M'Clise. The academicians, no doubt, judged honestly and conscientiously from the work before them, and delivered their verdict accordingly. Our judgment arises from a different cause; and we record it as a cheering beacon-light to the young and ardent spirit embarking in the noble but hazardous profession of the fine arts.

It has been our fortune to know Mr. M'Clise from the commencement of his London career, and we were the first to be attracted by, and publicly to notice, the promise of his talent. Four years since, with doubt and diffidence, he presented to that Academy, from which he has now taken the highest degree in the arts, a probationary drawing to enable him to become a student; and he has since annually carried away the first medals in his respective classes. Last year Mr. M'Clise obtained, at the same time, the first medal in the painting school, and the first medal in the life,—a circumstance, we believe, without parallel in the annals of the institution. He has now gathered the last laurel. The steadiness of this youth in the pursuit of his object, is a pledge against the otherwise startling rapidity with which he has attained eminence. We have, upon more than one occasion since our earliest mention of him, noticed with commendation some of the early works of Mr. M'Clise, and we trust that our anticipation of his ultimate success may be as brilliantly realised as he can himself desire.

Mr. M'Clise is a native of Cork—the birth-place of Barry, by the by—and we have no doubt the intelligence of his progress will make his townsmen up in bottle.

Mr. Parris.—We refer with like pleasure to the advancement in honours of this delightful artist, to whom no department in his profession, from the immense Colosseum and Diorama, to the lovely Bridemaid, or minute delineations of familiar life, seems to come amiss; and whom we also had the pleasure of distinguishing by praise in the columns of the *Literary Gazette*. It is always gratifying to have our estimate of genius confirmed by the event; and matters of this kind are productive of the most agreeable sensations which occur in the laborious and often painful task of periodical criticism. Mr. Parris has been appointed Historical Painter to the Queen: may it encourage him to persevere with the same zeal and success which has already raised him so high in his profession!

BRITISH INSTITUTION.

It is well that the annual collection of copies and studies made by the artists and amateurs of the pictures of the old masters, at the Gallery of the British Institution, is not exhibited to the public at large; and that it is to be seen only on two days;—on the one by the directors and governors of the Institution, on the other by the friends of the artists and amateurs themselves. Repetitions so numerous of the same subjects are by no means favourable to the display of art; and this fact never im-

pressed us more forcibly than when we ascended the stairs of the Gallery last week. The effect was absolutely astounding; and it was impossible not mentally to exclaim,

"Something too much of this!"

We are perfectly aware of the advantages which have been derived, and which may henceforward be derived, by the British school of painting, from a judicious use of the kindness and liberality of the noble and opulent owners of the works of the great masters, contributed for the purpose of study; but that judicious use consists in entering upon a careful, and patient, and practical investigation of the latent principles on which the works in question have been produced. This consideration, we are concerned to say, appears (comparatively speaking) to have been but little attended to during the recent season. Above a hundred and thirty artists, students, &c. have, in the course of little more than a month, contrived, with pernicious industry—for it has in most instances been the labour of the hand, and not of the head—to cram the Gallery from end to end with slight, hasty, incorrect, and consequently valueless, imitations of the admirable works which, as we humbly conceive, were placed before them with a very different object.

We now come to the more pleasing task of pointing out a few of those to whom our general censure is not justly applicable. And first, as far as we had the opportunity of observation, it appeared to us that in the estimate of talents, our female artists may almost, if not altogether, be said to have the balance in their favour. A singularly clever copy, in oil, has been made by Miss Alabaster, from "The Infant Don Balthazar," by Velasquez. In water-colours there are several admirable studies, by Miss Fanny Corboux, Miss Derby, Miss M. A. Pickersgill, &c., principally from the works of Sir Joshua Reynolds and Metzu. Of the before-mentioned painting by Velasquez, there is also an excellent copy by Mr. M'Clise. In the train of good specimens may be ranked those of Messrs. Middleton, and Herbert Smith, after Vandyke; of Messrs. Woolmer, and Hofland, (the latter not finished,) after Claude; and of Messrs. F. Watts, and Lance, after Bergheim. Mr. Clater has very judiciously, and with great skill, selected the group from the back-ground of the recumbent "Venus" by Titian. After a head by Rembrandt, there are several clever studies by Mr. Simpson and others. The "March of Silenus," by Rubens, has been closely followed by Mr. Bus; and Mr. Faulkner's copy of the portrait of "Mrs. Lloyd," by Sir Joshua, is also very successful. But "The Snake in the Grass," by Reynolds, which, to speak literally, as well as metaphorically, is the eye of every collection in which it appears, has been but remotely approached by any one. Time, as well as skill, it must be recollected, is on the side of Sir Joshua; and where is the artist whose palette is so harmonious as that of Time?

NEW PUBLICATIONS.

Original Designs for Cottages and Villas, in the Grecian, Gothic, and Italian Styles of Architecture. In thirty plates, designed and drawn on stone by E. W. Trendall, Architect to the Epsom Grand Stand, &c. Carpenter and Son.

This is one of the most satisfactory of the various publications of a similar nature which have come under our notice; and it has the great merit of furnishing an estimate of the expense at which the several designs contained in it may be realised;—from the simple single

cottage of 350*l.*, to the graceful Italian villa of 3,000*l.* The details respecting the roofs, doors, windows, mouldings, &c. are calculated to be of great utility. We recommend any of our readers who contemplate the erection of a mansion for themselves, especially in the neighbourhood of London, or of any other large town, and who wish "to unite convenience and elegance with economy," to consult Mr. Trendall's work.

National Portrait Gallery of Illustrious and Eminent Personages. By William Jerdan, Esq. Part XXXII. Fisher, Son, and Co. It would be difficult to select three better impersonations of bravery, piety, and science, than the subjects of the thirty-second part of the *National Portrait Gallery*;—namely, Lord Northesk, Mrs. Hannah More, and Sir Astley Cooper. In addition to other matter, the memoir of Mrs. More contains an interesting description, in a letter from a friend, of the countenance, figure, manners, and character of that excellent and venerable individual. In the memoir of Sir Astley Cooper are several very entertaining anecdotes of that eminent surgeon's early life. While speaking of Sir Astley's extraordinary professional success, his biographer observes,—"We believe we may state, on unquestionable authority, that in the last year of his abode in the city, at New Broad Street, he realised the largest sum ever known by a medical practitioner; no less, indeed, than 21,000*l.*—and for years after his transit to the west end of the town, the same astonishing celebrity, with its consequent wonderful income of from 18,000*l.* to 20,000*l.* per annum, attended his footsteps." The portraits, which are from the pencils of Lawrence, Pickersgill, and Pattison, are admirably engraved.

Anecdotes of William Hogarth, written by himself; with Essays on his Life and Genius, and Criticisms on his Works. Part I. Nichols and Son.

A very valuable and pleasing supplement to Mr. Major's recent republication of Dr. Trusler's "Hogarth Moralised." It is to be completed in four parts, and will contain forty-eight plates not to be found in Dr. Trusler's work. The two volumes, combined, will comprehend all that is known respecting our great satirical and humorous painter, and pretty nearly all that has been written on his merits. The present Part is chiefly occupied with his account of himself, and with the criticisms of Horace Walpole, Gilpin, Ireland, and Christie.

Carlo Ferriero, the unfortunate Italian Boy. Lithographed by W. Day. Silverlock.

PUBLISHED, we are told, for a charitable purpose. There are few persons familiar with London who will not be struck with this very characteristic sketch of the poor boy, whose memory it will forcibly recall. His tortoise on one hand, the other soliciting aid, and the laughing good-humoured eyes and mouth, which won their way to many a donor, are all truly expressed; and it is a melancholy reflection to think how little they affected the remorseless ruffians by whom he was destroyed.

Sir W. Scott, Bart. Painted by Wilkie; engraved by E. Smith. Moon, Boys, and Co. This is a very broad and effective portrait, in which the engraver has happily embodied Mr. Wilkie's style, and afforded the admirers of

• We have been told that the boy had placed 5*l.* or 38*l.* in some Savings' Bank near Leicester Square, and intended to return home a wealthy wanderer, to his father, a small farmer in Sardinia, in the present month!

the Northern Wizzard an opportunity of possessing another resemblance of him, also from a Scottish hand, in its way not inferior to his own fame.

PANORAMA OF FLORENCE.

A PRIVATE view of Mr. Burford's new Panorama of Florence, yesterday, afforded us very great pleasure. It is one of the most striking likenesses of a city which we ever saw; and more highly finished as a painting than is usual with works of the kind. A fine subject and excellence in art are sufficient recommendations of any panorama; and the present prefers both these claims to the public approbation.

CHOLERA MORBUS.

[Our letter from Newcastle, of the latest date, will not, we hope, abate the interest which has been taken in these communications. It is not our desire to puff them into undeserved importance; but we give them to the public as statements to be relied upon, as coming from an individual who sought the dangerous seat of cholera in this country, to pursue his own study of the disease, and who is utterly unconnected either with those commercial interests, which seem but too willing to conceal the progress of the pest, rather than impede the business of the port,—or with those medical men who are predisposed to take up sides as their situation prompts, either for or against the perils of the spreading malady.—Ed. L. G.]

Newcastle, Dec. 14.

MY DEAR SIR,—I have the melancholy duty of calling your attention to the progress of the cholera, which after visiting a number of small villages in the environs of Sunderland, has now broken out in two towns of large population and great commercial importance. Considering the number of persons resident in both these places, of similar habits and modes of life to those among whom its ravages were most conspicuous in the town of Sunderland, it is rather curious that the disease should not previously have entered this new sphere of propagation, than that it should finally make its appearance, and, if we judge by the Newcastle reports, with a power of infection which exceeds any thing that it has hitherto shewn in this country. Whatever may be the diversity of opinion among medical men with regard to the isolated cases of Oswald Reay or Robert Jordan, more especially the latter, still it is not at all impossible, as indeed has occurred under my observation, that persons may fall victims to the malignant cholera without immediately communicating the disease to others. This is rendered still more remarkable in the cases which followed, of Eddy, a waterman's wife, and Maria Mills, both persons of dissolute habits. I am sorry that my excellent friend, Dr. Walland of Sheffield, should have been led to make any hasty remarks upon the examination of this last person's body. Further observation, which will no doubt be afforded to him in Sunderland, will lead him to form a more correct estimate of the difficulty that is presented by the pathology of this disease. The total number of cases which have occurred in Newcastle since the 8th of December, are 61, out of which 2 have recovered and 13 died. It is certain, that the number of deaths compared with the number of cases does not bear a strict relation to the results as yet presented by the malignant cholera; and lead us to place some doubts, farther increased by the great number which are reported at the first breaking-out of the disease, that these reports may contain cases of a doubtful nature. I have the opinion of a gentleman who has studied the disease with me in Sunderland, and who has seen several cases in this town, to bear me out in this supposition.

The different parishes have provided themselves with hospitals, and a resident surgeon is appointed to each. The board of health exert themselves to their utmost, and the subscriptions have hitherto been extremely liberal: it is to be hoped, that the obstinacy of some who *will not have the disease*, and of their medical parasites, will not be able to plant impediments in their way, as occurred in the town of Sunderland, and was there productive of the most irremediable mischief—and of warfare against truth, for which there is but a too certain relish even in this town.

Mr. Greenhow, of North Shields, in a letter to the mayor of Newcastle, dated Dec. 11th, announced the appearance of cholera in that place. I in consequence went thither yesterday, but was only enabled to see one case, the wife of a man who had himself suffered from the disease, and from which he had recovered. He had come lately from Sunderland. His wife took ill at 12 o'clock the night previous to my arrival; and the symptoms, which in her were extremely well marked, will most probably have had a fatal termination. At the little colliery of Seghill, a village in this vicinity, eight cases terminated fatally during the course of last week. At Sunderland the ratio of new cases, deaths, and recoveries, remains still nearly the same; though I have reason to think, from the number of specifics which are beginning to be found out, that it is really becoming milder in its attacks. A Mr. Tine, here, has raised his *tiny* voice to prove that the cholera does not exist in Sunderland. The press complain that medical men do not study the subject with sufficient historical impartiality and professional gravity: who would either study or write for individuals who are ready to assert, if it suits their temporary objects, that white is black? But there are, we might mention, many medical men busily engaged in collecting proper statistical details, with careful medical investigations; yet this mode of procedure is not consonant with the rapid succession of bold assertions that have so frequently been made upon this important and deeply interesting subject. I remain, &c.

W. AINSWORTH.

SKETCHES OF SOCIETY.

THE SIN OF PUNNING.

To the Editor, &c.

SIR,—I have read with more attention than they deserved, the remarks of your correspondent "Senex" against punsters. In point of matter there is little to reply to, his lugubrious effort consisting chiefly of asseverations strung together, and which are no more proved to be applicable to a punster, than his allusion to hanging a hound proves that Jack Ketch ought to be employed by the nation to execute every individual who shall try to promote mirth, instead of to vilify his neighbours. Your correspondent professes much respect for truth, but he appears only to employ it in order to convey error; for he endeavours to lead us to suppose, that punning is the cause of the confusion that exists in our language and ideas. Now, to any one, even to the unhappy old gentleman who addressed you, it must be apparent, that bringing two words before the mind in one sentence, and at the same time leading it to perceive the precise manner and degree in which they differ and accord, will do any thing but tend to supposing them the same, or to confusing their import; for who ever could conceive that a person saying, "An ass ought to do more work than a horse, because his ears are

longer," would produce during the subsequent life of a hearer, a confusion between the life of the annual admeasurement of time as oral organs of a donkey, or lead him to suppose time was measured as if by a wand, and *ergo* by the length of donkey. Illustrative facts seem to be things your killing correspondent studiously avoids, would have given us some instance of produced (unless he means his letter as by the practice with which he deals so h. Your phlegmatic friend is really too accurate with, and evidently too little accurate to connect effects and causes, to allow entertain a hope that by addressing my remarks to him on the advantages of punning, I convince him of its great benefit. I therefore, merely say a few words to readers on the good I have seen derived it. Happily, I have been in the habit of in the society of those who do not on occasions exert the whole power of the battery of their reason, as your friend done, but enliven those about them with sparks, that rather indicate the powerful whence they proceed, than lead us to them their fullest effort. In the first place, punning causes mirth, and thus enlivens the gloom of the English dinner-table. It does more; a pun will often, when else will take effect, stop one of those du the form of a debate, which are not quently the pest of social life, by obliging majority of a party to be silent listeners what they do not wish to hear, or are to understand. Moreover, these sallies of imagination often lead to remarks more liant than those which give them birth. last some mind shines forth with a lustre would not have been produced but for the sient flash that set it in action. One correspondents seems to argue against the instead of the use of puns; and on this he might say as much on any other subject if abuse be an evil, according to his sh every thing is an evil in itself, because every thing is capable of being abused. But pun are men of too critical minds thus to ceived; and in the remarks which have made against them by your correspondent they will merely trace the malignity of who, incapable of raising a smile them are envious of the talent the punster possesses, and, mortified they cannot share the pun reward, wish to impugn the motives and of that which they find attractive in but fatal to themselves. I have the pleasure to remain, a lover of mirth and an avowed scriber,

JUVENAL.

MR. EDITOR,—Under the head, "Sketches of Society," I have seen in your last week's *Belles Lettres* a letter on the Sin of Punning. SENEX, which I consider contains asseverations rather extraordinary. I am not addicted to punning, nor would I defend general punning, but neither would I punish punsters nor damn.

Senex commences with asserting, it might be said that he who would make a word would pick a pocket! I know this dictum has been affiliated on Dr. Johnson; but I think that the assertion is as malignant as Punning is neither a perversion of truth of thought; nor is it true, as Senex says, that to any man who has thought at all, it is apparent that he thinks through the medium of words—nay I will assert words do not diminish, though they may represent ideas as received or furnished. Here, then, are

and I at issue. Language is not the mode nor medium of thought itself; but it is the mode or medium, or vehicle, whereby men have generally agreed to communicate their thoughts or ideas—language is the dress of thought, and words are its parts. Thought may be possessed and communicated in various modes without language; but language is certainly the best mode adopted for communicating thought. Ideas must exist antecedent to words,—and independently of these exist. Words may, indeed, subsequently have a sort of retro-reflective effect—not of engendering new ideas, but of making combinations or contrasts of those already received. But the ideas themselves must originate from material impressions—and while in this life, perhaps from them alone; for we have no knowledge but by perception or inspiration, and all knowledge must be rendered evident and palpable to the sense. Sensation is the vehicle of impressions, and thence of ideas; and though the mind may afterwards abstract such perceptions, still all conceptions must be referred to perception as their criterion and source. The ideas of objects may be considered as the shadows of substances—substanceless indeed, yet still resembling their prototypes. All our ideas are of natural objects, or of some artificial combination or preparation of natural objects; but none of our ideas result from arbitrary signs invented to preserve not supersede those ideas:—that would make an effect be its own cause.

Punning is therefore to language what grimaces are to gestures—and who will censure grimaces if they are useful in conveying a particular trait of feeling or train of thought? Grimaces are distortions or contortions of gesture—ridiculous perhaps, but not disgusting when intended for a legitimate object—and punning bears a similar relation to words or language; but punning has no specified relation to thought, further than as it exists in the mind of the punster. Wit is the laughable allusion of thought—punning the laughable allusion of language. Now, we do not censure wit in abstracting thought and applying it to a particular relation not perhaps before recognised; why then should we censure punning, which does not pervert words more than wit perverts thought? Or why not allow a pleasing alteration in words—an alteration merely temporary and particular—as well as an alteration in ideas, according as a playful imagination may perceive a comparison? And a temporary and transient alteration, not a permanent contortion nor perversion, is all pretended to or effected by wit or punning. All tropes of rhetoric are actual puns, and all figures are virtual witticisms; at least all such tropes and figures as are based on comparison. Finding a comparison between objects and ideas is certainly great, and noble, and dignified—is the utmost effort of thought—and is the resource and standard of all knowledge; yet finding a fancied comparison, for a pleasing purpose, between the signs of those ideas, though less dignified and natural, is not therefore contemptible nor culpable. Wit does not pervert thought by its particular application or comparison; neither does punning confuse or pervert language (I speak of legitimate wit and punning); for thought thus induced into a particular application retains its form after the transient alienation of wit—so do words retain their original acceptation, after punning has affected them, just as the features are restored after a grimace. A comparison of words, either as they affect the ear or eye, may possibly be contemptible or fastidiousness; but it can never be considered

culpable in any point of view whatever, by any person possessing honour or candour. To say, therefore, that a mere punster would pick a pocket—that is, that he who for an innocent purpose institutes a fancied or real resemblance between words, would institute for a criminal purpose a relation between his own fingers and the purses or pockets of another—is a detestable falsehood, emanating from the malignancy of envy, as well as the ignorance of politeness and truth. I had much rather be a punster, than he who wantonly condemns him; for punning may be condemned as a miserable effort of abstractive comparison, but can never be condemned as a wilful act of mystification or misrepresentation; and a false accuser is worse than the falsely accused.

JUVENIS.*

Crown Coffee House, Holborn.

SIR,—Finding your columns open to the persecuted, and knowing that you always publicly expose a punster when he deserves it, I have ventured to lay my case before you. I am unfortunately troubled with a step-son, who not only annoys me, but every one else, by his puns and jokes. In fact, sir, his nonsense keeps my cook continually in *broils*—my housemaid in *hot water*—occasions quarrels between the pot-boy and my *porter*—and has been the cause of several actions against me, his unhappy father-in-law.

The other morning, thinking it would have some influence on his joking propensities, I took up your last week's *Gazette*, and commenced reading to him the letter from "Senex" against the poor, pitiable, petty, paltry, pocket-picking practice of punning; and wishing to impress it on his mind, as I proceeded, I said—"There, John, you hear, 'the effect is more deadly than your mind can perceive.'" "Deadly, sir! I always thought it *lively*." This so enraged me that I hurried on to the concluding lines, where I most pointedly read, "Who would call a punster *friend*?" "Certainly no one but a *Quaker*," replied the "poor wretch!" This was quite enough—and I threw down the paper, disgusted.

Now, sir, this precious step-son has been boring me for some time to purchase him a commission in the army, and says I can have no objection, for his mother is *quite agreeable* (but, sir, I do not think her so); and yesterday—just as I was rejoicing at the loss of his company and his jokes for a short time—the following note was handed to me:—

Dear Step-father,—I take a farther step to induce you to accede to my wishes, and to prove how well calculated I am for the army, by sending you the subjoined—my new plan of attacking a city "in lines." Notwithstanding all that my mother says, Believe me yours,
JOHN THOMAS.

Great London's the city for wealth,
For merchants, marts, shipping, and docks,
Where freemen support foreign bonds,
And buy themselves into the stocks.

Where booksellers live in a Row,
And coaches must stand in their ranks—
Where people will sail on the Thames,
Though fearing "a run on the banks."

A stony-soil'd Smith-field is kept
For beasts by these great demitens,
Where bullocks are *alter'd* to posts,
And sheep are compell'd to use pens.

Old Billingsgate, too, is well known—
For London the sole fish depôt,
And where in good friendship each morn
Both Christians and musculo-men go.

Within their own Halls very oft
Large Companies dine in high glee—
Besides, in a principal street,
There's a Company all days for tea.

* Two Juvenises to one Senex is rather hard odds.—
Ed. L. G.

Now, among their great men it's been said
A goose pretty often is found—
Fool libel, alas! though we know
Their *Poultry* is greatly renown'd.

The aldermen—each in a gown
Which old women's notions entails—
Transact all the "business of weight,"
But will not be troubled with Scales.

Last winter the king was to dine
With the mayor and the citizen knights,
Who—very well known as good *livers*—
Prepared for a great shew of *lights*.

It appears the mayor's note to the duke
Deprived all the Cits of their pleasure,
For the corn-market people declared
That the *meal* was upset by this measure.

But the notable note once forgotten,
Sir John grew in favour each day,
Till again for the office of mayor
Sir Peter found him in the way.

While some, with the aid of queer tales,
Strove hard to get Laurie a-head,
Key "stood at the top of the pole"—
"Put up by his friends," it was said.

But the aldermen threw out the mayor,
And thought to put him to the rout;
While his friends "twas supposed they were *brewn*"
Declared that they all would stand *stead*.

Elected—rejected—again,
Sir John at length conquer'd his foes,
Who fall'd—while so many said "Ay!"—
The City to lead by the "Noes!"

MUSIC.

NEW PUBLICATIONS.

Historical Ballads. Part I. England. 4to.
pp. 92. Chappell.

THIS is a very original and a very well-executed design, whether we look at the poetical amber and music in which these interesting incidents of former times are preserved—at the choice of the incidents themselves—or at the tasteful and curious fashion in which they are adorned by subjects from the graver. William the Conqueror's grave, the death of Rufus, the wreck of Prince William the son of our first Henry, Cœur de Lion's Sirvente, the Battle of Azincour, the Union of the Roses, the Armada, and several other historical events, are briefly described from ancient authors and records; and upon each of them Mr. Planché has written a characteristic ballad, which Mr. Bishop has set to music. Each is also embellished with an appropriate wood-cut, done in a clever style: among these are the Abbey of St. Etienne at Caen, the burial-place of the Conqueror; Rufus's stone in the New Forest; where that king was slain; Henry I. mourning the loss of his children, from an old illumination in the Cotton collection; the ruins of the Castle of Durrenstein, where Cœur de Lion was imprisoned; parts of the armour of the Black Prince, as preserved at Canterbury, and parts of that of Henry V., as at Westminster; the Manor House, Grafton Regis, Northamptonshire, where Edward IV. met the fair Lady Elizabeth Grey; a gold medal in honour of the marriage of Henry VII. and Elizabeth of York, and a medal struck in commemoration of the destruction of the Armada. Even those who are acquainted with the antiquarian cave of Mr. Planché, and the neatness with which he has produced his several works on subjects professedly illustrative of by-gone times, would hardly expect to see such valuable reminiscences in what may be called a music-book. Some of them are rare, and hitherto unengraved, and all of them are worthy of attention. With regard to the musical compositions, we shall only say that we prefer Edward III. to the Black Prince and Azincour—the former smacks of an ancient originality. As a specimen of the poetry, we quote the "Shipwreck of Prince William."

"The sea is glass, and mirror'd there
Are the bright round moon and her sea-maid hair;

And the bark leaps on like a living thing,
As the reckless rowers laugh and sing,
And shout, as they pass each lagging sail,
That woe in vain the fickle gale
From the arms of night.

England's darling hope and heir,
And the flower of England's youth are there.
And calm and bright as that moon-lit sea,
The life of the young and gay must be;
And time with them as swiftly flies
As the bark that over its surface hies,
Like a beam of light!

A shock—a shriek!—and the young and brave
Are wrestling all with the whelming wave—
Their lips are still from the wine-cup wet,
The merry burden is ringing yet;
And lo! they drink of the bitter surge,
And the booming billows yell their dirge,
With the struggle, white.

England's court is clouded o'er—
England's king will smile no more.
Oh! the many that giddily sweep
Over the world's delusive deep,
Nor dream of the shoal or the sunken rock,
Till ruin yawns with the fatal shock,
In the haven's sight!"

We need scarcely repeat, that this volume is one of the fittest of the season for the fair musician and admirer of polite literature. Mr. Allan Cunningham is, we are told, engaged on Part II., Scotland.

Melodies. Dedicated to the Queen. By Mrs. Alexander Kerr. London, Novello; Edinburgh, Robertson.

THIS is another beautiful lady's book, than which a more pleasing present could hardly be offered in the circle for whose gratification, in eye, ear, and mind, it seems especially addressed by its accomplished author. The elegance and refinement displayed in the embellishments would alone recommend it to great favour; but when we consider that music, poetry, and ornament, are all the production of one person, and that person a young female, we are surprised at the combination of talent, and hail it with the more fervour when united with feminine grace and intelligence. The volume is appropriately dedicated to the Queen; and the airs possess much of the simplicity which we like. "Alone with me their memory be," is a sweet air. "Oh! slumber on," is another of equal merit, with a pretty and peculiar accompaniment. The "Boat glee" will, we think, become a favourite; it is light and agreeable. Some of the poems are founded on real events, others spring from warm yet gentle feelings. "My father-land" is a delightful recollection of infancy—we quote four verses of it in corroboration:—

"Again upon thy verdant bank I stand,
Thou oft-remembered, silvery-flowing Tweed,
Endeared by absence view my father-land,
Each outlined hill around, and woodland mead:
Yon bridge, o'er which so oft I've musing leant,
Whilst gazing on thy waters' tranquil flow,
Recalling hours in brighter day-dreams spent,
Than e'er fulfilled may bless our path below.
Still does thy sweet and gently murmur sound
My spirits soothe, mine ear attract, and seem
Each flow'ry brae, each well-known spot around,
Like strange realities of youthful dream.
In other climes, in distant lands I've been,
Which nature gifts with ever-varying bloom,
Yet have I none preferred to thee, bright scene!
My once so happy, and my early home.

Oh! when I've shelter'd from the sultry heat,
To mark the proud course of some giant stream;
In bright blue skies the early sun to greet—
Have watched the splendour of his orient beam;
When from the lofty Ghauts' impendent height,
Or toiling round a fortress-hill's ascent,
The fury of the fierce monsoon in might
Has dashed along, and mighty forests rent—

How has my heart with transport turn'd to thee!
How have I pictured thy enchanting dell!
The fondly cherish'd scenes of infancy—
Can any other those bright scenes excel?
Oh! there are names within our breasts enshrined,
The sweetest still, which Fancy can portray:
Time-hallow'd, blest, which are so clear defined,
They fade not, change not, e'en in life's decay."

1. *Love's Offering* for 1832. By F. N. Bayley. London, Wybrow.

2. *Le Bouquet; a new Set of Quadrilles.* By G. Stanley. S. Chappell.

3. *The Cadeau* for 1832. Johanning and Whatmore.

1. WITHOUT any striking feature in this volume, there are some pretty little sentimental songs, particularly the first, which is really sweet enough, though it does not tempt quotation.

2. Very easy to play, and very agreeable to dance to. We recommend this set of quadrilles to our charitable friends, not only for their own merit, but as the work of an unfortunate man.

3. A pretty present for our fair friends, with pretty songs, musical waltzes, and a set of quadrilles. This volume will prove a pleasing companion for a long evening. We must, however, find fault with the taste of the editor in admitting a set of quadrilles from an unsuccessful opera—they are the worst things in the book.

The Musical Gem; a Souvenir for 1832. Edited by N. Mori and W. Ball. London, Mori and Lavenue.

WITH the exception of the set of quadrilles, the whole of the music in this handsome Annual is simple and pleasing. Beautiful lively German airs are sprinkled through the volume; and a great many gallops and mazurkas, some of them known and some original, all *capacitally* arranged, add greatly to the utility, as well as the beauty of the book. A very pretty frontispiece is made by a lithographed portrait of Miss Stephens, after Jackson. Mrs. Wood, Miss Inverarity, Paganini, and Moschelles, also figure in portraiture, with biographical sketches. Miss Inverarity, it is stated, is the grand niece of Ferguson the Scottish poet.

DRAMA.

COVENT GARDEN.

MISS SHIRREFF played *Polly*, in the *Beggars' Opera*, on Thursday, with still greater *éclat* than *Mandane*. Braham, Bartley, Mrs. Keeley, and Mrs. Gibbs, made the strongest cast of the whole opera.

THE ADELPHI.

ANOTHER merry novelty has been produced here, called *Favourites in Town*. This extravaganza, written by Mr. Moncrieff, exhibits the most popular performers of the Adelphi in favourite characters: they are jumbled together in town, and making fun with each other, contrive marvellously to entertain the audience. The best proof of success is a theatre crowded every night, and *Victorine* still reigning with undiminished attraction.

OLYMPIC.

A VERY agreeable little comedy was performed here on Wednesday last, entitled the *Dumb Belle*. It is written by Mr. Bernard, the author of *Old Regimentals*, &c.; and is a sort of companion-picture to Mr. H. Bayly's *Perfection*. A Captain Vivian of the Queen's own (Mr. J. Vining) has travelled all over the world in search of a dumb woman, whom he could love well enough to take for a wife, having an unconquerable horror of the "extraordinary development of the organ of speech," ill-naturedly made proverbial respecting the ladies. His *Cousin Elisa* (Madame Vestris) determines to punish him; and on his arrival pretends to have lost her speech by an

accident, which at first delights him; but to his great annoyance, he soon discovers that she is deaf as well as dumb; and he is consequently compelled to bawl all his tender speeches through an ear-trumpet. We shall not enter into a detail of the incidents by which matters are brought to a satisfactory termination; suffice it to say they are amusing and ingenious. The piece is prettily written, was exceedingly well acted and received, and will no doubt be a lasting favourite.

VARIETIES.

Aérographe.—Under the name of *aérographe*, M. Pessault Delatour has invented, and presented to the French minister of marine, a portable telegraph, capable of being used by night as well as by day; the principles of which are exceedingly simple, and which promises to be extensively serviceable.

Revue Encyclopédique.—This publication has changed hands. M. Jullien has surrendered it to new editors. M. Hippolyte Carnot has published an address in the French journals, in which, while he acknowledges the merits of M. Jullien, he intimates the necessity of introducing a better arrangement into the work, and giving it a more encyclopedic character.

Sir Walter Scott.—By letters from Malta we are happy to learn that Sir Walter Scott has arrived there in improved health.

Naval Toy.—A very pleasing toy has been put into our hands by its publisher (Mr. N. Carpenter), who has founded it on Captain Basil Hall's charming volumes, *Fragments of Voyages and Travels*, &c. &c. It is called the Log-book of a Midshipman, and is certainly a most entertaining way of teaching naval tactics. Twenty pictures represent so many scenes, so well described in the gallant captain's narrative; and a tee-totum, with numbers marked upon it, and an allotment of counters, enable a juvenile party to play the game; which in its good and bad fortune, as the spin indicates, leads to the various difficulties, defeats, retrograde movements, and successes, which constitute this novel amusement. But what we like the best in it, is the continual reference to the *Fragments*; which being read, render the youthful gamesters familiar with the circumstances of a seafaring life, and beguile them sportively into the acquisition of much useful knowledge. Its effect is also likely to promote a literary taste, and to induce a more extensive perusal of the popular volumes to which we have alluded; and it would not be easy, at this Christmas-gift-ing time, to put more attractive subjects under the eye of youth. We commend it in this view to parents and guardians.*

Barrel-Organs, &c.—It is computed that there are wandering about the streets of Paris 106 organ-players, 135 singers, 271 musicians, and 220 mountebanks; three-fourths of whom are strangers in the city, and only 150 of whom are French. It is well known that the crowds which these personages collect are very favourable to the operations of pickpockets. Henceforth they are to be subjected to a rigid superintendence, and, among other regulations, are

* Apropos, speaking of Captain Hall's productions, we might mention his excellent and sensible remarks on the preparatory education of a boy intended for the navy, which have appeared in the *United Service Journal*: they are well worthy of the attention of the public, and especially of the directors of the new naval school at Hartwell. In their sound principles and practical advice we can readily anticipate future heroes of England, at once moral and brave, intelligent and daring, religious and unconquerable, bearing the flag of their country with undiminished glory over every sea-girt portion of the globe.

to go home at six o'clock in the evening in winter, and at eight in summer.

Asylum for Female Orphans.—The advertisement which we this week observe in the newspapers, of the election of five poor girls into this Institution, prompts us to notice it in our columns, where such notices are far from misplaced, since the cause of charity and benevolence can never be dissociated from the cause of education and literature. This Asylum was instituted by Sir John Fielding in 1758, and incorporated in 1800. It is destined for the reception of friendless and deserted girls—as destitute a class as ever appealed to humanity for succour and protection. From the account before us, it seems to be highly and respectably patronised; and we rejoice to see it stated, that “more than two thousand deserted females have been sheltered and protected from vice and want by it, supplied with food and raiment proper for them, and taught whatever could render them useful in their situation, or comfortable and happy in themselves.” Such an establishment needs only to be extensively known to augment its power of usefulness and enlarge its services to society.

The Pitcairn Islanders!—The descendants of John Adams and others of the Bounty mutineers, over whose fate so romantic an interest has been thrown, have at length had the spell dissolved into a sad reality. By the last Sydney newspapers we observe that this colony, eighty-six in number, has been transported to Otaheite by H. M. S. Comet; and the information adds, that they do not appear well pleased with the change, in consequence of the dissolute habits of the people with whom they are now intermixed.

Mr. Holman, the celebrated blind traveller, was, according to the same journals, at Sydney; where improvements were proceeding, and a newspaper, called the *Independent*, and a two-penny post, had been established at Launceston; though the streets of Sydney were in such a state that the inhabitants were obliged to receive the governor on stilts.

Diorama.—M. Daguerre's new diorama at Paris is a view of Mont Blanc from the Valley of Chamouni.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. L. Dec. 17.]

Maternal Sketches, with Minor Poems, by Eliza Ruth-erford.

Mr. Samouelle's new work, the *Entomological Cabinet*, is in the press.

A new periodical, to be called the *Pocket Album of Fashion, Music, and Romance*, is announced.

The Hackney Carriage Pocket Directory for 1839, with a coloured Map, and the New Regulations commencing January 5th.

The second and concluding volume of the *Succession of Sacred Literature*, by J. B. B. Clarke, M.A.

LIST OF NEW BOOKS.

METHEOROLOGICAL JOURNAL, 1831.

December.	Thermometer.	Barometer.
Thursday... 1	From 33. to 48.	30.09 to 30.09
Friday... 2	40. to 48.	30.06 to 30.09
Saturday... 3	39. to 48.	30.05 to 30.02
Sunday... 4	39. to 51.	29.96 to 29.86
Monday... 5	40. to 50.	29.80 to 29.56
Tuesday... 6	39. to 51.	29.38 to 29.42
Wednesday 7	43. to 53.	29.40 to 29.90

Wind N.W. and S.W., the latter prevailing. Except the 6th, cloudy; rain at times. Rain fallen, 1.5 of an inch.

December.	Thermometer.	Barometer.
Thursday... 8	From 43. to 55.	29.15 to 29.22
Friday... 9	46. to 55.	29.10 to 29.20
Saturday... 10	43. to 54.	29.32 to 29.43
Sunday... 11	39. to 55.	29.47 to 29.35
Monday... 12	40. to 54.	29.33 to 29.16
Tuesday... 13	42. to 53.	29.32 to 29.48
Wednesday 14	33. to 48.	29.55 to 29.60

Wind S.E. and S.W., the latter prevailing. Except the 13th and 14th, generally cloudy, with frequent rain. On the evening of the 13th, from 7 to 7h. 15m., a violent thunder-storm, accompanied with vivid flashes of lightning, and a smart shower of hail; immediately after the first peal of thunder, the wind rose terrifically, carrying away tiles and branches of trees; this, however, was but of short duration. Faint flashes of lightning in the S.W. from 5 p.m. till after midnight. Rain fallen, 1.25 of an inch.

CHARLES H. ADAMS.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. November 1831.

Thermometer—Highest.....	56.00°.....	82d.
Lowest.....	30.50°.....	98th.
Mean.....	30.3985	
Barometer—Highest.....	30.96.....	93th.
Lowest.....	29.08.....	6th.
Mean.....	29.63844	

Number of days of rain and snow, 16. Quantity of rain and melted snow in inches and decimals, 2.7075.

Winds.—2 East—3 West—3 North—3 South—1 North-east—0 South-west—8 North-west.

General Observations.—The mean temperature was nearly the average of the month, therefore much colder than November last year: on fourteen nights the thermometer descended below the freezing point, and there were not the usual number of fine days—the latter part of the month was very dull and heavy: the mean of the barometer was high, and the maximum much above any in the corresponding month for the last eight years: the quantity of rain also above the average; and more has fallen since the 1st of January, than in all last year: about half an inch of snow fell between the afternoon of the 16th, and 8 a.m. on the 17th. The evaporation 0.15 of an inch.

TO CORRESPONDENTS.

To "an Admirer of Mr. Canning." We answer, that the purport of Mr. Stapleton's work is to show that Lord Castlereagh's system of foreign policy consisted in siding with the ultra-monarchical party, whereby collision between that party and the democratical was produced—that Mr. Canning's system consisted in neutrality between those two parties, and in "staying the plague both ways"—that by this system he confined within the narrowest limits the collision which he found, and prevented any new one occurring—that the Duke of Wellington returned to Lord Castlereagh's system, whereby, as Mr. Canning had predicted, in two years a collision was produced.

Upon reconsidering the subjects, we deem it as well not to publish poems on Cholera, the Italian Boy, &c.

We think we shall devote a notice in our next to sundry original poems which have been sent to us for insertion.

To C. H. We have enough ad to keep tolerably right ourselves; and we cannot undertake the task of correcting our contemporaries.

History of Morley, and several local and topographical works are only delayed for want of room to do them justice.

We mistook the name of the clever and successful author of the *Bride of Ludgate*. It should have been spelt *Jerrold*—and *palmam qui meruit ferat*.

A proof of the wisdom and liberality of the two patent theatres is afforded by their both choosing the same subject for their Christmas Pantomime: to be sure, there could be but one Hop o' my Thumb fit for such a purpose!

In honour of two noble lords who appear as authors in our Review of this week, we have discontinued all our continuations, and noticed none but works hitherto unrecorded in our page. It happens through this, that Roby's Traditions of Lancashire, Chenivex, the Usurer's Daughter, and other Reviews, in type, are postponed.

We cannot tell N. B. C. more than the brief advertisement itself, what "the Town" is. It is a good name for a newspaper, of which it seems to be the announcement.

ERRATUM.—In our last, we printed the names of Messrs. Colburn and Bentley as the publishers of *Newton Forster*, by mistake for Cochrane and Co., to whom we are indebted for this able novel.

ADVERTISEMENTS.

Connected with Literature and the Arts.

TO HAILEYBURY and ADDISCOMBE

STUDENTS.—For the convenience of those who wish to continue their Studies during the Vacation, the most important branches requisite for the above Seminaries, in Oriental, Classics, and Mathematics, are taught during the present holidays at the London Oriental Institution, No. 8, South Colonnade, Bedford Square, the conductors of which acquired the Oriental Languages in India from learned Native Teachers, and have passed several Honorary Examinations for the Hon. E. I. Company's Service with distinguished success.

PUBLIC EXAMINATION.—Feinagian

School, 7, Great George Street, Eastern Square, Mr. J. M. Murton, A.B. (educated by the late Professor Feinagian) invites the attention of Parents and Guardians to the Public Examination of his Pupils, to be held on the evenings of Wednesday and Thursday, the 21st and 22nd inst. at 7 o'clock precisely. Those who, from sad experience, have found that their children have been years at school without making any progress commensurate with the time, are requested to attend and form a judgment of themselves on the advantages to be derived from the Feinagian System.

Tickets of admission may be had at the School.

SOCIETE DES PROFESSEURS de LANGUE FRANCAISE.

Patrons.

S. A. B. Monseigneur Le Duc de France.

S. A. B. Madame Le Duchesse de Kent.

President et Vice-Président.

M. J. C. Taver, Etion.

M. Le Docteur Granet, Durham House, Chelsea.

Cette Société, Philantropique et Littéraire, vient d'être fondée dans l'intention, 1o, d'établir des Liaisons Fraternelles entre les Français qui exercent l'enseignement de leur Langue en Angleterre. 2o, de former un Fond de Secours pour subvenir aux besoins de leurs Confrères malheureux, et de ceux qui n'ont pu faire des économies pour leur vieillesse. 3o, d'assurer aux Français des Maîtres instruits et capables.

On peut se procurer le Sommaire des Statuts de la Société chez tous les Libraires de Londres, ou chez le Secrétaire, qui remettra d'un tiers parvenu des Examens à ceux de M. le Professeur qui lui en fera la demande.

A l'Assemblée générale du 5 Janvier, 1832, on a arrêté définitivement les Statuts qui ne sont que provisoires.

A Londres, 8, Carlton Chambers, Regent Street.

BD. LEFEE, Secrétaire.

N.B. Les Lettres adressées au Secrétaire doivent être affranchies.

TO DETECT FRAUD.—AN Fencil

having Steel Points, or Needles, or Tortoiseshell Points, and White Metal, substituted for Silver, in Gracings on the Fencil.

To avoid all the inconvenience arising from the spurious articles, see that the Fencil has the same "S. Mordant and Co. makers and patentees" on the body of the case, and that the case is all silver or all gold; and also to ensure the proper mode for replenishing the case, see that each box has a yellow label, with the word "Warranted" on it, and a red sealing-wax impression, bearing the initials "S. M. and Co."

In many instances the purchaser has paid as much for these spurious Steel-pointed Pencils and Tortoiseshell Cases, as for the genuine silver and gold articles.

Shoppers in provincial towns would do well to observe the above remarks, to prevent their being imposed upon, the public using much inconvenience in not being supplied with the genuine article.

Elegant and appropriate Christmas Presents.

Just published, for the Use of Young Persons.

A NEW AND COMPREHENSIVE

DRAWING-BOOK, on an improved Plan; or, a Series of Practical Instructions in Landscape Painting in Water-Colour.

By JOHN CLARK.

Illustrated by Fifty-five Views from Nature, descriptive Objects, mounted in imitation of Drawings, enclosed in a handsome Box.

The Price of the Work is Six Guineas: a sum which does not exceed what is usually paid for a good Drawing-Master for Twelve Lessons.

2. Urania's Mirror, coloured, 1l. 14s.

* * The Second Part of Urania's Mirror, containing the Planets, an Orrery, &c. will shortly appear.

3. Clark's Portable Diorama, 3l. 3s.

4. Myriorama, First Series, 15s.

5. Myriorama, Second Series, 1l. 4s.

6. Asheton's Historical Map of Palestine, 1l. 15s. canvass and roller; 2l. 2s. full coloured and varnished, in roller; 1l. 16s. canvass and case.

London: Printed for Samuel Leigh, 16, Strand.

Transfer Prints.

Just published by Dobbs and Co. 124, Fleet Street, and 13, Soho Square,

A NEW SERIES of SCREEN-PATTERNS, by one of the most admired Artists in Fencil of the present day.

A Set of Picturesque Designs for Pale Screens.

A Complete Assortment of Grecian and other Ornamental Borders.

In addition to the above, Messrs. Dobbs and Co. have stored on hand a great variety of Lithographic Prints, both English and Foreign, suitable for all the purposes to which transferring is applied. These may be transferred either on White Wood or on Dobb's Transfer Card-board; and ladies will be enabled to transfer their work by means of Dobbs's Crystal Varnish, which is perfectly colourless, and will give a clear and transparent finish.

N.B. Sold by all respectable Booksellers.

EDINBURGH REVIEW.—Advertisements for insertion in the Advertising Sheet of No. 108, are requested to be sent to Longman and Co. Paternoster Row, by December 24th; and Proprietors, Bills, &c. to be stitched in the Number, within a week from that date. Advertisers will perceive the advantage of sending their Advertisements and Bills early, as they are placed in the order in which they are received by the Publishers.

Ackermann's Annuals for 1823.

Just published by R. Ackermann, 95, Strand,

FORGET ME NOT. This Volume commences a new Series, printed on larger paper and in more durable binding than heretofore, and contains Engravings by W. D. and E. Finden, Graves, Carter, C. Rolla, Engleheart, Davenport, &c. from Drawings or Paintings by Sir T. Lawrence, Martin, Frost, Richter, Holman, and other distinguished Artists. The Literary Department embraces the usual variety of Contributions by popular Writers of both Sexes. Price 12s.

Ackermann's Juvenile Forget Me Not, embellished by Ten Engravings on Steel by eminent Artists. This Work claims the particular notice of those who wish to put into the hands of youth of either sex an elegant Miscellany, expressly adapted to their age and capacity, and conducive alike to moral improvement and pleasing instruction. Price 8s.

Erasmus.—The Drawing of the Vanquished Lion, in the Juvenile Forget Me Not, ascribed by mistake to E. Landseer, A.R.A., is by T. Landseer, the Engraver of that Plate.

The Humourist, by W. H. Harrison, Author of "Tales of a Physician," illustrated by Eighty-one Engravings on Wood of Comic Subjects, designed and executed by W. H. Brooke. Price 12s. bound in morocco.

A second edition of Ferdinand Franck, or the Youthful Days of a Musical Student, now first illustrated by Engravings on Wood, from Designs by George Cruikshank. Price 3s. boards.

The Sacraments and the Sabbath.

In 8vo. price 2s. 6d. boards.

THE SACRAMENTS and the SABBATH, in Four Sermons, before the University of Oxford, with Remarks on Holy Scripture, by WILLIAM JAMES, M.A.

Vicar of Cobham, Surrey, and Fellow of Oriel College. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Library of Modern Fiction.

In 50 vols. post 8vo. price only 6s. per vol. neatly bound,

THE MODERN NOVELISTS; a Selection of the best recent Works of Fiction, from the pens of the most eminent Authors; among which will be found Works of Mr. Ward (the Author of Tremaine), Mr. Lister (the Author of Granby), Mr. Theodore Hook—Mr. Horace Smith—Mr. Grattan—Mr. Bailew, &c. &c.

As the Impression of this cheap and unique Collection is limited to 800 Copies, those who are desirous of procuring Sets, are requested to transmit their Orders forthwith to their respective Booksellers; and, in order to accommodate those persons who already possess some of the Works contained in this Collection, it has been determined to issue them also in separate Sets, at the same price, by which means the public may complete their Sets, or make any selection they please.

Printed for Henry Colburn and Richard Bentley, New Burlington Street.

Printed by Messrs. Rivington.

A LETTER FROM MONTAGU BURGOYNE, Esq., one of the Verderers of the Forest of Waltham, to His Majesty's Commissioners of Woods and Forests; shewing the Necessity of Enclosing a considerable part of that Forest, not only with a view of maintaining the Rights and Interests of the Crown, but of providing Work for Thousands of His Majesty's Subjects, who are starving for want of Employment.

A Library Present for the Ladies.

Price 12s. elegantly bound in morocco, uniquely embellished and gilt.

THE COMIC OFFERING; or, Lady's Melange of Literary Mirth for 1823.

Edited by MISS L. H. SHERIDAN.

And embellished with Seventy original and most Humorous Designs by various Comic Artists, with a variety of facetious Contributions by the principal Female and other eminent Writers of the day.

A few Copies may be had of the Comic Offering for 1823. Price 12s. bound as above.

"The Comic Offering is a lady's book, and well does it merit that designation. Calculated for the boudoir in its purity of morals and refinement of taste, it is also a suitable ornament for the studies of the artist. Miss Sheridan has filled up a niche in our Annual literature that was decidedly unoccupied—filled it with humour and wit, and her efforts will, we are confident, not be overlooked by the 'gentle dames' for whose amusement they are admirably calculated. The illustrations are numerous and beautiful, and the volume in every way calculated to brighten the pleasures of the summer bower, as well as of the winter fireside."—*Gleaner.*

"That which L. E. L. is in the world of sentiment, Miss Sheridan is in the world of fun—the absolute empress, unrivalled and unparalleled! The engraved drolleries of her work are exquisite—the literature is of the very first order: this is certainly the most humorous and really droll of all the Comic Annuals."—*World of Fashion.*

"There is not in this very original work one borrowed pun; and its elegance and taste render it peculiarly adapted for female perusal: there is every thing to commend, and nothing to condemn. The exquisite binding alone ought to sell the book; and we cannot desire any greater passage or more extensive circulation."—*Lady's Museum.*

Published by Smith, Elder, and Co., 63, Cornhill.

In 12mo. price 2s. in cloth.

LUTHER'S TABLE-TALK; or, some Choice Fragments from the Familiar Discourse of that godly, learned Man, and famous Champion of God's Truth, Dr. Martin Luther.

London: Longman and Co.; Hatchard; Seelye; and Rivington; Timms, Dublin; Whyte and Co. Edinburgh; Bellamy, York; and Finlay and Charlton, Newcastle-upon-Tyne.

The Little Library.

BIBLE ILLUSTRATIONS; or, a Description of Manners and Customs peculiar to the East, especially Explanatory of the Holy Scriptures. With Sixteen Engravings.

By the Rev. BOURNE HALL DRAPER.

Price 4s. square 18mo. half-bound.

The preceding Volumes of the Little Library are:—

1. **The Mine; with Sixteen Engravings.** By the Rev. Isaac Taylor. 2d edition, price 3s. 6d.

2. **The Ship; with Sixteen Engravings.** By the same Author. 2d edition, price 3s. 6d.

3. **The Forest; with Twenty-six Illustrations.** By Jefferys Taylor. Price 3s. 6d.

4. **The Public Buildings of the City of Westminster Described; with Twelve Engravings.** Price 3s. 6d.

5. **The Public Buildings of the City of London Described; with Twelve Engravings.** Price 3s. 6d.

6. **The Garden, or Familiar Instructions for the Laying-out and Management of a Flower Garden; with Illustrative Engravings on Wood and Steel.** Price 3s. 6d. plain, and 4s. 6d. coloured.

Preparing for publication,

The Farm; a New Account of Rural Toils and Produce. By Jefferys Taylor.

The Volumes, although connected by a General Title, as belonging to the Little Library, are individually complete, and not numerically arranged.

As the Publisher of the Little Library has recently printed several other works for the instruction and amusement of young persons. His Juvenile Library contains a large collection of approved publications, and a variety of popular schemes to facilitate the education of youth.

The Algerines; or, Twins of Naples. In 3 vols. 12s. 6d.

Soldier Boy. By Rosalia St. Clair. 3 vols. 12s. 6d.

Eve of St. Agnes. By Catherine Ward, (now Mason). 4 vols. 22s.

In 12mo. 2d edition, enlarged, price 2s. boards.

SURE METHODS OF IMPROVING HEALTH and PROLONGING LIFE, by regulating the Diet and Regimen. Embracing all the most approved principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the Cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life.

To which are added, an Account of the Art and excellent Effects of Training for Health, Rules for reducing Corpulence, and Maxims for the Bileous and Nervous, &c. Illustrated by Cases. By T. J. GRAHAM, M.D. &c.

"We are disposed to think it the most useful and rational work of the kind we have met with. It contains many hints novel to us, and is altogether an admirable code of health."—*Atlas*, Sept. 1827.

"The tendency of this volume to advance the important objects which it proposes is unquestionable; and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1827.

"That men of all habits will derive information from it, calculated to increase their comfort and extend their days, is firmly our conviction."—*Edinburgh Observer*, Jan. 1828.

To this edition is attached an Appendix, containing a full Account of the Cholera, with the best Remedies, as ascertained by Physicians of the greatest experience in that fatal Disease. London: Published by Simpkin and Marshall, Stationers' Court; sold by all Booksellers.

Of whom may be had, lately published, by the same Author, 2d edition, in 1 large vol. 8vo. price 16s. boards, with Engravings.

2. A Chemical Catechism, in which the Elements of Chemistry, with all the recent Discoveries, are very clearly and fully explained, and its Applications to the Phenomena of Nature, to Agriculture, Manufacture, and Medicine, described. Illustrated by Notes, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms.

"We esteem and recommend it. Every subject of interest connected with this delightful science is treated in the clearest manner."—*London Weekly Review*, 21st Feb. 1828.

"Every thing is here written up to the latest date, and the work cannot fail, we think, of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—*Monthly Magazine*, 1st March, 1828.

"The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements to the compound and illustrative branches of the study. It is very superior to Parkes's."—*Atlas*, 1st March, 1828.

Wallace's Treatise on Geometry.

In 1 vol. duodecimo, with Plates, 3s. in cloth.

A TREATISE ON GEOMETRY; comprising a copious Demonstration of the Elements of Euclid, with a Commentary, Theoretical and Practical, and a Collection of Propositions for Exercises, intended for the Use of Students.

By ROBERT WALLACE, A.M.

Teacher of Mathematics, &c. Glasgow.

"Mr. Wallace, in the work before us, may almost be said to have imitated Euclid; he has condensed and simplified the work, shortened the demonstrations, and facilitated in no ordinary degree the study of the science. There are several other improvements, which render this book the best, as it is the cheapest work of the sort published."—*Scott's Times*.

Printed for Thomas Tegg, 78, Chesapeake, London; R. Griffin, and Co. Glasgow; and sold by all Booksellers.

PICKERING'S ALDINE EDITION of the British Poets. Vol. XVIII. price 5s. containing the Poems of Milton, Vol. I. with a Portrait, original Memoir, and Notes. By the Rev. JOHN MITFORD.

Poems by L. E. L.
In demy 4to. price 21s. tastefully bound and gilt, and containing 36 highly finished Engravings, &c.

FISHER'S DRAWING-ROOM SCRAP-BOOK. With Poetical Illustrations.
By L. E. L.

Gifts are the beads of Memory's rosary, Whereon she reckons kind remembrances Of friends and old affections.
London: Fisher, Son, and Co.; and Simpkin and Marshall.

CONVEYANCERS' EVIDENCE.

By THOMAS COVENTRY, Esq., Barrister at Law.
"In assuming the office of mediator between buyer and seller, borrower and lender, I have considered—first, what the one can strictly require; second, what the other may justly refuse; and, third, the medium course dictated by fair-dealing."

London: J. and W. T. Clarke, Portugal Street, Lincoln's Inn.
Of whom may be had, by the same Author,

1. Powell on Mortgages, 3 vols. 6th edition, 5s. 5s.

2. Watkins on Copyholds, 2 vols. 4th edit. 1l. 12s.

3. Digested Index to Reports (forming, with Hammond's and Jeremy's Indexes, a complete Digest of Adjudged Cases, from the Earliest Period to the Present Time), 3 vols. 2l. 5s.

4. Watkins's Elements of Conveyancing, 7th edition, 15s.

5. Concise Forms in Conveyancing, 4th edit. 6s. 6d.

6. Observations on Titles under Enclosure Acts, 6s.

7. Jones's Pocket-Book, 2 vols. 6th edit. 18s.

8. A Treatise on Common Recoveries, 8s.

9. A Readable Edition of Coke upon Littleton, 1l. 1s.

In 8vo. 2d edition, 6s. 6d. boards.
A TREATISE ON PULMONARY CONSUMPTION; its Prevention and Remedy.
By JOHN MURRAY, F.R.S. F.L.S. &c.

"How can we refuse to assent to testimony as to the power of an avowed agent, which has science and experience to give weight? With the example of Harvey, Jenner, Davy, and others before his eyes, Mr. Murray has adopted that course of careful publicity which is most congenial to the high and noble spirit of chemical investigation which he has chosen."—*Monthly Rev.*
"Mr. Murray, in his recently published work on consumption, has deserved the gratitude of his countrymen. He has traced the disease and its remedies chemically, and appears to us to have taken new and original views of both. His work is, moreover, full of very interesting and curious facts, of a nature to engage the unscientific observer."—*Spectator*.

"A valuable little work."—*Recorder*.

Printed for Longman, Rees, Orme, Brown, and Green.
By the same Author,
Memoir on the Diamond. 12mo. 5s. cloth.
A Glance at some of the Beauties and habits of Switzerland. 12mo. 7s. boards.

BOOKS IN THE PRESS.

Dr. Lardner's Cabinet Cyclopaedia.

No. 779.

SATURDAY, DECEMBER 24, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Eugene Aram. By the Author of "Pelham," "Paul Clifford," &c. 3 vols. 12mo. London, 1831. Colburn and Bentley.

"UNGENTLE" as our craft is esteemed, and "ungentle" we do not deny that it is—for, Heaven knows, our feelings for the work and our feelings for the author are too often at variance—yet it has its pleasures, and among the very highest of them is the perusal of a work like this. No one can deny to Mr. Bulwer a foremost place among the names which do honour to modern literature. His readers may vary in their preferences—one may like the lively and actual satire of *Pelham*; a second prefer the poetic imagination of the *Disowned*; a third the deeper conception and dramatic effect of *Paul Clifford*: but the very fact of these preferences shews how much there is from which to choose. It is not in every age that we would appeal to popularity as the sure precursor of fame, but we may safely in the present time. The reading public now is large and enlightened; and the daily judgment is far more likely to err on the side of severity than of eager admiration. The great popularity of our author's works is at least a good sign; and though we are free to confess that not even a public condemnation could have changed our opinion of pages which seem to us fraught with genius, yet we are equally willing to admit that it has been a personal gratification (if a critic can have one) to see that the general judgment has so powerfully borne out our own. We ought to be more national with our countrymen's literary triumphs than we are; and when we find a writer admired and appreciated in other lands (France, Germany, and America, for example, where large editions of these works have been reprinted,) it were a good and a high feeling to rejoice in the success, and take a pride in that writer being of our language and our time.

Eugene Aram is decidedly the most finished of Mr. Bulwer's productions. An admirably wrought-out story, of which we never lose sight, gradually rises in interest, till the feeling becomes equally intense and painful. There are scenes, in the third volume especially, superior in power and effect to any thing he has yet done. Eugene Aram is a fine, a most original conception. He is described as "a man whose whole life seemed to have been one sacrifice to knowledge. What is termed pleasure had no attraction for him. From the mature manhood at which he had arrived, he looked back along his youth, and recognised no youthful folly. Love he had hitherto regarded with a cold though not an incurious eye: intemperance had never lured him to a momentary self-abandonment. Even the innocent relaxations with which the austere minds relieve their accustomed toils, had had no power to draw him from his beloved researches. The delight *monstrari digito*—the gratification of triumphant wisdom—the whispers of an elevated vanity—existed not for his self-dependent and soli-

tary heart. He was one of those earnest and high-wrought enthusiasts who now are almost extinct upon earth, and whom romance has not hitherto attempted to portray—men not uncommon in the last century, who were devoted to knowledge, yet disdainful of its fame—who lived for nothing else than to learn. From store to store, from treasure to treasure, they proceeded in exulting labour; and having accumulated all, they bestowed nought—they were the arch-misers of the wealth of letters. Wrapped in obscurity, in some sheltered nook, remote from the great stir of men, they passed a life at once unprofitable and glorious—the least part of what they ransacked would appal the industry of a modern student; yet the most superficial of modern students might effect more for mankind. They lived among oracles, but they gave none forth. And yet, even in this very barrenness, there seems something high: it was a rare and great spectacle—men living aloof from the roar and strife of the passions that raged below, devoting themselves to the knowledge which is our purification and our immortality on earth, and yet deaf and blind to the allurements of the vanity which generally accompanies research—refusing the ignorant homage of their kind, making their sublime motive their only meed, adoring Wisdom for her sole sake, and set apart in the populous universe, like stars, luminous with their own light, but too remote from the earth on which they looked to shed over its inmates the lustre with which they glowed."

Eugene Aram is, if we may use such a term, a miser of the mind—one who accumulates gold not as a means, but as a possession—one who acquires knowledge, of which the mere acquisition is to be its own "exceeding great reward." Nothing can be well more opposed to that display, which is the characteristic of our own age. Perhaps the former spirit of lonely study might have been more delightful to the individual—the present one of diffusion more advantageous to the many; and it is a strange but true thing, that the happiness and interest of one are rarely compatible with the happiness and interest of the multitude: of itself is the last person for whom we can live.

We know few things more touching than the following confession, wrung in a moment of pain from the lips of the solitary student.

"Ah!" said Aram, gently shaking his head, "it is a hard life we bookmen lead. Not for us is the bright face of noon-day, or the smile of woman, the gay unbending of the heart, the neighing steed and the shrill trump—the pride, pomp, and circumstance of life. Our enjoyments are few and calm, our labour constant; but that, is it not, sir?—that, is it not? the body avenges its own neglect. We grow old before our time—we wither up—the sap of youth shrinks from our veins—there is no bound in our step. We look about us with dimmed eyes, and our breath grows short and thick, and pains and coughs and shooting aches come upon us at night—it is a bitter life, a bitter life—a joyless life. I would I had

never commenced it. And yet the harsh world scowls upon us—our nerves are broken, and they wonder we are querulous—our blood curdles, and they ask why we are not gay—our brain grows dizzy and indistinct (as with me just now), and, shrugging their shoulders, they whisper their neighbours that we are mad. I wish I had worked at the plough, and known sleep, and loved mirth—and not been what I am."

In a narrative whose unity is so dramatic, it is difficult to make a quotation, without its being either unconnected or indistinct; but perhaps the following scene, between Aram and the wretched man who threatens him with an accusation, will display a part, without too much revealing the whole.

"It is not easy for either of us to deceive the other. We are men, whose perceptions a life of danger has sharpened upon all points: I speak to you frankly, for disguise is unavailing. Though I can fly from your reach—though I can desert my present home and my intended bride, I would fain think I have free and secure choice to preserve that exact path and scene of life which I have chalked out for myself—I would fain be rid of all apprehension from you. There are two ways only by which this security can be won: the first is through your death—nay, start not, nor put your hand on your pistol; you have not now cause to fear me. Had I chosen that method of escape, I could have effected it long since. When, months ago, you slept under my roof—ay, *slept!*—what should have hindered me from stabbing you during the slumber? Two nights since, when my blood was up, and the fury upon me, what should have prevented me tightening the grasp that you so recent, and laying you breathless at my feet? Nay, now, though you keep your eye fixed on my motions, and your hand upon your weapon, you would be no match for a desperate and resolved man, who might as well perish in conflict with you as by the protracted accomplishment of your threats. Your ball might fail—(even now I see your hand trembles)—mine, if I so will it, is certain death. No, Houseman; it would be as vain for your eye to scan the dark pool into whose breast you cataract casts its waters, as for your intellect to pierce the depths of my mind and motives. Your murder, though in self-defence, would lay a weight upon my soul, which would sink it for ever: I should see in your death new chances of detection spread themselves before me—the terrors of the dead are not to be bought or awed into silence; I should pass from one peril into another; and the law's dread vengeance might fall upon me, through the last, even yet more surely than through the first. Be composed, then, on this point! From my hand, unless you urge it madly upon yourself, you are wholly safe. Let us turn to my second method of attaining security. It lies, not in your momentary cessation from persecutions; not in your absence from this spot alone; you must quit the country—you must never return to it—your home must be cast,

and your very grave dug in a foreign soil. Are you prepared for this? If not, I can say no more; and I again cast myself passive into the arms of fate." "You ask," said Houseman, whose fears were allayed by Aram's address, though, at the same time, his dissolute and desperate nature was subdued and tamed in spite of himself, by the very composure of the loftier mind with which it was brought in contact: "You ask," said he, "no trifling favour of a man—to desert his country for ever; but I am no dreamer, to love one spot better than another. I should, perhaps, prefer a foreign clime, as the safer and the freer from old recollections, if I could live in it as a man, who loves the relish of life, should do. Shew me the advantages I am to gain by exile, and farewell to the pale cliffs of England for ever!" "Your demand is just," answered Aram; "listen, then! I am willing to coin all my poor wealth, save alone the barest pittance wherewith to sustain life; nay, more, I am prepared also to melt down the whole of my possible expectations from others, into the form of an annuity to yourself."

"These words, aided by a tone of voice and an expression of countenance that gave them perhaps their chief effect, took even the hardened nature of Houseman by surprise; he was affected by an emotion which he could not have believed it possible the man, who till then had galled him by the humbling sense of inferiority, could have created. He extended his hand to Aram. "By ——" he exclaimed, with an oath which we spare the reader, "you are right! you have made me as helpless in your hands as an infant. I accept your offer—if I were to refuse it, I should be driven to the same courses I now pursue. But look you; I know not what may be the amount of the annuity you can raise. I shall not, however, require more than will satisfy wants, which, if not so scanty as your own, are not at least very extravagant or very refined. As for the rest, if there be any surplus, in God's name keep it for yourself, and rest assured that, so far as I am concerned, you shall be molested no more." "No, Houseman," said Aram, with a half smile, "you shall have all I first mentioned; that is, all beyond what nature craves, honourably and fully. Man's best resolutions are weak: if you knew I possessed ought to spare, a fancied want, a momentary extravagance, might tempt you to demand it. Let us put ourselves beyond the possible reach of temptation. But do not flatter yourself by the hope that the income will be magnificent. My own annuity is but trifling, and the half of the dowry I expect from my future father-in-law, is all that I can at present obtain. The whole of that dowry is insignificant as a sum. But if this does not suffice for you, I must beg or borrow elsewhere." "This, after all, is a pleasanter way of settling business," said Houseman, "than by threats and anger. And now I will tell you exactly the sum on which, if I could receive it yearly, I could live without looking beyond the pale of the law for more—on which I could cheerfully renounce England, and commence 'the honest man.' But then, hark you, I must have half settled on my little daughter." "What! have you a child?" said Aram eagerly, and well pleased to find an additional security for his own safety. "Ay, a little girl, my only one, in her eighth year; she lives with her grandmother, for she is motherless; and that girl must not be left quite penniless should I be summoned hence before my time. Some twelve years hence—as poor Jane promises to be pretty—she may be married off my

hands; but her childhood must not be left to the chances of beggary or shame."

Such is the compact; for its consequences we refer the reader to the work itself. We close with one or two chance extracts.

"There is a certain charm about great superiority of intellect that winds into deep affections, which a much more constant and even amiability of manners in lesser men, often fails to reach. Genius makes many enemies, but it makes sure friends—friends who forgive much, who endure long, who exact little; they partake of the character of disciples as well as friends. There lingers about the human heart a strong inclination to look upward—to revere: in this inclination lies the source of religion, of loyalty, and also of the worship and immortality which are rendered so cheerfully to the great of old. And, in truth, it is a divine pleasure to admire! admiration seems in some measure to appropriate to ourselves the qualities it honours in others. We wed,—we root ourselves to the natures we so love to contemplate, and their life grows a part of our own. Thus, when a great man, who has engrossed our thoughts, our conjectures, our homage, dies, a gap seems suddenly left in the world—a wheel in the mechanism of our own being appears abruptly stilled; a portion of ourselves, and not our worst portion—for how many pure, high, generous sentiments it contains!—dies with him."

Autumn.

"Along the sere and melancholy wood the autumnal winds crept, with a lowly but gathering moan. Where the water held its course, a damp and ghostly mist clogged the air; but the skies were calm, and checkered only by a few clouds, that swept in long, white, spectral streaks over the solemn stars. Now and then the bat wheeled swiftly round, almost touching the figure of the student, as he walked musingly onward. And the owl, that before the month waned many days, would be seen no more in that region, came heavily from the trees, like a guilty thought that deserts its shade. It was one of those nights, half dim, half glorious, which mark the early decline of the year. Nature seemed restless and instinct with change; there were those signs in the atmosphere which leave the most experienced in doubt whether the morning may rise in storm or sunshine. And in this particular period the sky influences seem to tincture the animal life with their own mysterious and wayward spirit of change. The birds desert their summer haunts; an unaccountable inquietude pervades the brute creation; even men in this unsettled season have considered themselves more (than at others) stirred by the motion and whisperings of their genius. And every creature that flows upon the tide of the universal life of things, feels upon the ruffled surface the mighty and solemn change which is at work within its depths."

We have allowed ourselves brief space to allude to the minor characters, though the epithet will scarcely apply to the noble and beautiful Madeline; but we should do scant grace to our entertainment, if we did not commend to especial favour a certain corporal, quite "a man of the world." We have closed these volumes with regret—perhaps the highest praise we can give them: we also intend reading them again; for the attraction of the narrative hurries us too much over deep thought and profound knowledge of life, in the first instance. Praise and panegyric are too often confounded; we admit to having most sincerely and warmly bestowed the former: its

truth will be its best guarantee for the favour of our readers, to whom we cordially recommend *Eugene Aram*.

We have only to add, that it is dedicated to Sir Walter Scott, and that a more fitting offering was never laid upon his shrine. To have done it justice, our extracts ought to have been a hundred fold.

CHOLERA.

Is the Cholera Spasmodica of India a Contagious Disease? The Question considered in a Letter to Sir Henry Hallford, Bart., M.D. By William Macmichael, M.D., &c. London, 1831. Murray.

How is the Cholera propagated? The Question considered, and some Facts stated. By an American Physician. London, Miller.

A Letter to the King's most excellent Majesty, on the Delusion which has been so actively disseminated on the subject of the Cholera Morbus, &c. By a Physician. London, Smith.

Cholera: its non-contagious Nature, &c.: in a Letter to the Right Worshipful the Mayor of Newcastle. By T. M. Greenhow. Newcastle, Charnley.

Letters on the Cholera Morbus, shewing that it is not a communicable Disease. London.

Cholera: its Nature, Cause, Treatment, and Prevention, &c. By Charles Searle, Esq. 2d edit. London, Highley.

An actually practised and effectually successful Mode of Treatment of the Cholera. Translated from a Letter of Dr. Ewertz. London, Schloss.

Essay on the Origin, Symptoms, and Treatment of Cholera Morbus and of other Epidemic Disorders, &c. By T. Forster, M.B. London, Keating and Brown.

Observations on Cholera; comprising a Description of the Epidemic Cholera of India. &c. By T. J. Pettigrew, F.R.S., &c. London, Highley.

Cholera Morbus: a short and faithful Account, &c. By John Austin, Surgeon. London, Hughes.

Short and Plain Rules for the Prevention and Cure of the Cholera Morbus, &c. By Gideon Mantell, F.R.S., &c. London, Ellis et Unwin.

Of Pestilential Cholera: its Nature, Prevention, and Curative Treatment. By James Copland, M.D., &c. London, Longman and Co.

An Address to a Christian Congregation on the Approach of the Cholera Morbus. By Rev. W. Sewell, M.A. Oxford, Talbot.

WORKS on the subject of cholera have so multiplied on our hands, that we are obliged to notice a number at a time. We have then that one advantage would result from the arrangement—for, taken altogether, the mass would be more defined and complete—and a one inconvenience, which would be, brief the class of learned and respectable writers had company; but we question if comparison in this case is not even useful. We have arranged our titles according to subject, as given precedence to the question of contagion, as one which gains by discussion: there may be remarked, that very few write to prove that cholera is contagious, because where exists, every one thinks so—the uneducated and the ignorant have the fact forced upon their cognizance; and there would be but any doubts upon the subject, if certain modern men did not—partly out of mistaken philanthropy, and partly because they think they would be much credit gained in proving it

gress, even from street to street, or from town to town, is, comparatively speaking, extremely slow; that, notwithstanding its supposed epidemic character, cases do not originate spontaneously at distant towns, or even in neighbouring towns, till the disease has been imported, when it generally establishes itself in its new locality, and then its ravages are among the dirty and the dissolute, and among them, with proper precautions, malignant but not devastating. There is also a great peculiarity in the cholera—that the intellectual functions, the thinking part of humanity, which brings it in its closest relations with the immaterial world, remain vigorous to nearly the last moment; and, in most cases, when the total prostration of strength, the deadly-cold clamminess of the skin and hands, and the internal feeling of approaching dissolution sometimes experienced in less than an hour after the attack, warn the patient of his danger, his first feeling is to treasure with gratitude and joy those consolations which God has vouchsafed for him in prayer and self-communion, even during the visitation of a deadly pestilence.*

Lord Nugent's Memorials of Hampden, &c.

[Second notice: conclusion.]

IN concluding our notice of this able work, we are obliged to pass by the famous battle of Edgehill, and the battle of Lansdown, in which the gallant, honourable, and chivalrous Sir Bevil Grenvill fell; though on the latter event we copy a very characteristic letter from his faithful friend Trelawney to his widow Lady Grace Grenvill.

"Honorable Lady,—How can I containe myselfe, or longer conceale my sorrow for ye Death of yt excellent Man yr most deare Husband, and my noble Freind. Bee pleased with yr wisdom to consider of the events of warr, wch is seldome or never constant, but as full of mutability as hazard. And, seeing it hath pleased God to take him from yr La^{dy}, yet this may something appease yr greate flux of teares, that hee died an Honorable Death, wch all his enemies will envy, fighting wth invincible valour and Loyalty ye Battle of his God, his King, and Country. A greater honour then this noe Man living can enjoy. But God hath cal'd him unto himselfe to crowne him (I doubt not) wth immortall Glory for his noble constancy in this blessed Cause. It is too true (most noble Lady) that God hath made you

drinke of a bitter Cupp, yett if you please to submitt unto his Devine Will and pleasure by kissing his rodd patiently, God (noe doubt) hath a staff of Consolation for to comfort you in this greate affliction and tryall. Hee will wipe yr eyes, drie up the flowing springe of yr Teares, and make yr Bedd easye, and by yr patience overcome God's Justice by his retournning Mercie. Maddam, hee is gone his Journey but a little before us; wee must march after when it shall please God, for your La^{dy} knows yt none fall without his Providence, wch is as greate in the thickest shovre of Bullets, as in ye Bedd. I beseeche you (deare Lady) to pardon this my trouble and boldness, and ye God of Heaven blese you and comfort you and all my noble Cosens in this yr greate visitation, which shal bee the unsfayned Prayers of him that is, Most noble Lady, Your Ladishippes honorer and humble Servant

JOHN TRELAWNE."

"Trelawne, 20th July, 1643."

When the last fruitless conferences at Oxford ended, and the last cherished chance of peace vanished, Lord Nugent draws a striking picture of the country.

"And now the judges' sessions of Oyer and Terminer were suspended by message from the Houses, 'untill it should please God to end these distractions between king and people.' This consequence of civil war, long deprecated, long delayed, had become inevitable. The course of the common law was stopped through the land. It had hitherto been wondrously maintained in a country beset by fighting armies. But the great seal was in the king's hands, and, under the guise of general justice, commissions had for some time been issued only to such judges as were with the king or of his party; and the cases brought before them bore relation all to state matters. Moreover, the king now issued a proclamation for holding the Easter term at Oxford instead of Westminster, and requiring all the judges to attend him there. For some time after the commencement of the war, the power of the law had been preserved, respected, and duly administered, on both sides. The judges had gone their circuits, passing with flags of truce through the districts held by opposite armies, and holding their courts with sheriffs who at other times headed the levies of their respective counties in the field. And it is remarkable and memorable to all posterity, and glorious to the character of our country, that, throughout this great struggle, from first to last, there is no instance on record of private assassination or popular massacre; nor of plunder, except under the orders of war. 'Non interecinum inter cives fuisse bellum; de dignitate atque imperio certasse.' Doubtless, on both sides, as must ever be when interests lie deep, and rising passions overflow, and where the war is carried on by small detached parties of ill-disciplined troops, often acting under feelings of local feud,—the work of spoliation was carried on with more eagerness and severity where there was a spirit of personal or family animosity to be gratified. There were confiscations; there was free quarter occasionally allowed, but much oftener restrained; and private pillage there was none. What very strongly marks this, is the loud complaining, by the journalists, on both sides, of the enormities done by the troops, but which, when specified, even with all the exaggeration of party recitals of events then fresh, appear to have been few, and, with one or two great exceptions, trifling. These accounts are full of petty inflated details of such atrocities as those committed upon the furniture

and wine-cellars of Sir Robert Minshull's house at Bourton, or of Lord Say's at Broughton; a minister of the gospel led astride upon a bear; or bed-tickings and curtains cut to pieces and household stuff destroyed at Brentford; now and then recounting, in terms of deep horror or of vast commendation, a practical jest like that of the parliament's soldiers eating up the batch of apple-pies which Mrs. Armitage, the wife of the clergyman of Wendover, had baked for Prince Rupert's troopers. The instances of sanguinary cruelty, which find their place among the stories of these wars, were of such done in military execution: no secret murder; no bands of free-booters assembling for spoil between the quarters of the armies or among the villages deserted by their fighting men; no savage outbreak of a licentious rabble, disgraced the grave severity of this mighty conflict. An honourable memorial of the comportment of the English people in those unhappy times. The suspension of commissions of Oyer and Terminer did not last beyond a few months. No sooner had the parliament resolved to make a great seal of its own, than the common law courts again sat throughout the realm; and Hutton and Davenport, assisted by Maynard, Glyn, Wyld, and Rolla, for the Parliament, and Chief Justice Heath and Ryres for the king, tried causes under the authority of the two seals of England; the king's being in the hands of the Lord Keeper Littleton, and Whitelocke being appointed by the parliament to hold theirs."

But we must approach the concluding scene: Prince Rupert's enterprises, the battle of Chalgrove, and the death of Hampden.

"Hampden, incessantly, but in vain, endeavoured to promote some great enterprise, which might restore the cause, and give heart to its supporters. But, failing in this, he served to the last under Essex, with a zeal as obedient as if those measures had been adopted which his superior mind clearly saw were necessary for the success and credit of their arms."

"Whenever Rupert wanted cattle or any other provisions for his troops, he seized them from some part of these feeble and ill-connected lines. The remonstrances of the troops could no longer be suppressed, and Hampden was again loudly named to the parliament as the fit person to place at their head. To remove from himself all suspicion of a querulous or selfish ambition, and to exhibit to murmuring spirits a great example of patient subordination, he placed himself in constant and personal intercourse with the chief whose plans he disapproved, and many of whose qualities he held in disesteem. Meanwhile, the distant cantonments in the country round Thame and Wycombe, worn by fierce and wasteful sickness, by inglorious suffering, and deep discontent, were nightly harassed by the enemy. Rupert's zeal was unremitting, while Essex slumbered at his post; and while that sullen recklessness of its own fate which soon shews through an army distrustful of its chief, was spread from end to end of the parliament's long line, the king's troopers were ever alert, and generally successful in their enterprises, and therefore always hopeful and always formidable. Not a week, scarcely a night, passed, but they were heard laying waste some defenceless district—worse than defenceless, because occupied by the wearied and the disheartened, inviting attack, and never prepared to repel it. The country round suited well the activity of the young prince and his cavalry. The gorges of the hills, lined with deep tracts of beech wood, shrouded his stealthy march through the night,

* We are much obliged to G. A. for his communication on the cholera. It is much too diffuse for insertion in the *Gazette*; but, with the exception of the author's supposition that a large proportion of the poorer population of Sunderland may at the present moment labour under the disease in its incipient stage, we find nothing in which we do not coincide in opinion with himself. With regard to the means of prevention which he farther points out, we have, from the first time the disease made its appearance in this country, advocated their necessity, and shall, whenever an occasion presents itself, continue to do so. We have also received a notice of a German work on cholera, by Dr. Clarus, in which the author advocates a two-fold mode of its propagation, namely, as an epidemic capable of becoming contagious when combined with unfavourable circumstances; so that a malady may be sometimes miasmatic, sometimes contagious, and sometimes incline to the one type more strongly than to another. The treatment of cholera proposed by Dr. Veitch has been in part laid before the public in a previous number of the *Gazette*, where electricity, frictions, calomel, &c. have been recommended; but the Doctor commits a great error in supposing that time can be better employed in the first stage of this malady than in bleeding. The cholera morbus of the West Indies has no other relation to the "pestilential cholera" than in the deceptive and unfortunate name which has been given to the latter malady.

Nosologicus, who sends us the name of *Cholera Brumalis* for the new arrival, should know better. What does he think his medical brethren would say to his statement, that the blue skin, cold breath, &c., the peculiar characteristics of the cholera, are merely Christmas concomitants of the disease?

upon the flank or rear of his sleeping enemy; and at daybreak would he pour forth his squadrons sparkling like a torrent on the plain, which lay before him open for the manœuvre or the charge. Often would a village, many a mile from the king's country, suddenly wake to a dreadful irruption of horsemen, who came thundering in from the side opposite to that of his distant lines; the track of the night march marked from afar by the blaze of burning houses and the tumults of posts surprised, and the morning retreat by the dust of columns returning to Oxford, and leaving behind them a region of desolation and panic.

"Hampden had obtained, in early life, from the habits of the chase, a thorough knowledge of the passes of this country. It is intersected, in the upper parts, with woods and deep chalky hollows, and, in the vales, with brooks and green lanes; the only clear roads along the foot of the hills, from east to west, and these not very good, being the two ancient Roman highways, called the upper and lower Icknild way. Over this district he had expected that some great operation would be attempted on the king's part, to force the posts round Thame, and turn the whole eastern flank of the army. To this neighbourhood he had, the evening before, repaired, and had lain that night in Watlington." On the first alarm of Rupert's irruption, he sent off a trooper to the lord general at Thame, to advise moving a force of infantry and cavalry to Chiselhampton Bridge, the only point at which Rupert could recross the river. Some of his friends would have dissuaded him from adventuring his person with the cavalry on a service which did not properly belong to him, wishing him rather to leave it to those officers of lesser note, under whose immediate command the pickets were. But wherever danger was, and hope of service to the cause, there Hampden ever felt that his duty lay. He instantly mounted, with a troop of Captain Sheffield's horse, who volunteered to follow him, and, being joined by some of Gunter's dragoons, he endeavoured, by several charges, to harass and impede the retreat, until Lord Essex should have had time to make his dispositions at the river. Toward this point, however, Rupert hastened, through Tetsworth, his rear-guard skirmishing the whole way. On Chalgrove Field, the prince overtook a regiment of his infantry, and here, among the standing corn, which covered a plain of several hundred acres, (then, as now, uncultivated,) he drew up in order of battle. Gunter, now joining three troops of horse and one of dragoons who were advancing from Easington and Thame, over Golder Hill, came down among the enclosures facing the right of the prince's line, along a hedge-row which still forms the boundary on that side of Chalgrove Field. The prince with his life-guards and some dragoons being in their front, the fight began with several fierce charges. And now Colonel Neale and General Percy coming up, with the prince's left wing, on their flank, Gunter was slain, and his party gave way. Yet, every moment, they expected the main body, with Lord Essex, to appear. Meanwhile,

Hampden, with the two troops of Sheffield and Cross, having come round the right of the cavaliers, advanced to rally and support the beaten horse. Every effort was to be made to keep Rupert hotly engaged till the reinforcements should arrive from Thame. Hampden put himself at the head of the attack; but in the first charge he received his death. He was struck in the shoulder with two carbine balls, which, breaking the bone, entered his body, and his arm hung powerless and shattered by his side. Sheffield was severely wounded, and fell into the hands of the enemy. Overwhelmed by numbers, their best officers killed or taken, the great leader of their hopes and of their cause thus dying among them, and the day absolutely lost, the parliamentarians no longer kept their ground. Essex came up too late; and Rupert, though unable to pursue, made good his retreat across the river to Oxford."

The escape of Hampden from the field, his sufferings from his wound, and death, need not be repeated; and we have only to add, that an admirable portrait of him is prefixed to the first volume; and that a very curious print of the House of Commons sitting in 1623, with a delinquent at the bar, and also portraits of Fiennes, Pym, and Sir B. Grenvil, with a facsimile of a letter from Hampden, and other illustrations, serve to adorn these valuable volumes.

The subjoined letter corrects one of our own errors; and we take the liberty of correcting a typographical misprint in a quotation from Livy by the noble author. It occurs at page 377, Vol. II. and is one of those errors which so accurate a writer as Lord Nugent would least like to happen: therefore, *suo periculo*, for *Consule read Consul*.

To the Editor of the *Literary Gazette*.

Sir,—In the last number of the *Literary Gazette* is the following paragraph:—"The best anecdote we ever heard against the piousness of Mr. D'Israeli, is related of his tale of the country squire who killed a fox within three miles of Edgell, on the day of the battle, and was so intent on his sport, that he never heard, or heard of, that great event; but returning home, full of a hard run, for many a day described the vicissitudes of that chase. Now, the battle of Edgell was fought on a Sunday!"

On referring to the fifth volume of the *Commentaries on the Reign of Charles I.*, page 49, you will discover that your Conversational Critic has himself made a gross mistake; that the story there told is of a hunting Yorkshire squire, and that the battle is Marston Moor—it was fought on a Tuesday. So much for the fact.

Your Conversational Critic, who, it appears, has something to say "against my precision," but who, I must conclude, would discuss more acutely the affairs of William the Fourth than those of Charles the First, has succeeded in truly informing you, that "the battle of Edgell was fought on a Sunday;" and, therefore, exultingly infers that there was no hunting on that day. But had the circumstance alluded to occurred at Edgell, Sunday would not have necessarily prevented our squire from going out with his hounds.

It is well known that Sunday, even till a recent period in our history, was always held as a day of recreation as well as piety, not to be observed with the superstitions of a Jewish sabbath, nor with a cessation of all labours. The conversion of Sunday into a Judaic sabbath is an innovation of the Puritans, and arises from a confusion of ideas. And your Conversational Critic ought to have known, that "a country squire," in Charles's days, would not have refrained from hunting if he had appealed to the *Book of Sports*.—I am, &c.

L. D'ISRAELI.

The Usurer's Daughter. By a Contributor to Blackwood's Magazine.

[Second Notice.]

WE resume this very clever novel; and before we proceed to give the extracts we propose, we must rectify a mistake. We are given to understand that Mr. Scarlett is not the author's name. We before alluded to the excellently drawn character of the Usurer: a conversation between him and his daughter will at least give an idea of its originality—they are speak-

ing about identifying a person whom the father considers as concerned in the riots which had the previous night put his house in danger.

"Margaret," continued the father, "you must know that the writer of the letter, which I received on Wednesday night, was among the crowd. You can swear to his person. When the law loses a victim, it loses part of its value, and so far fails of the object for which it was made, and when law fails of its object, it is a non-entity, a dead letter, a thing of no value; it might as well not have been made at all as made in vain; and when there is no law at all, or what is the same thing, when laws are made in vain, there comes a disruption of the bonds of society, all is confusion and disorder, plunder and murder. Margaret, would you wish to see society in sad disorder, so that there be no safety for life or property?" "Certainly not, my father," answered Margaret; "but I am of opinion that there is no danger of such result from my abstaining to give positively a doubtful testimony against accused men." "If all thought as you do, my child, there would be no justice." "And if all thought as you do, my dear father, there would be no mercy." Such a reply to any other father than Mr. Erpingham would have brought a rebuke down upon the child that should have uttered it; but he heeded it not; on the contrary, without any abatement of his usual placid smile, without the slightest wrinkle on his brow, or cloud of anger on his countenance, he continued—"Mercy, my child, what is the use of mercy? Justice holds society together; but mercy relaxes those bonds, and leaves us in a sad disunion. Mercy is a word of wide, weak, and foolish meaning. It is the insinuating craftiness whereby men plunder the honest and industrious. Margaret, my child, I did not gain my wealth by mercy, and I will not lose it by mercy. They who came to me for gold to supply their wanton cravings, and pledged to me their title-deeds, and gave me large premiums, measured not those premiums by any mercy towards me. If I had had no money at command, they would not have put themselves and their reversions into my power. Had I been utterly poor and penniless, I might, for aught that mercy would have done for me, have sat down in the dust of humility, and have bowed my neck to the foot of the proud man, and have eaten the thankless bread of poverty, and have sunk down into an unmarked grave. Justice is intelligible, definite, written, and marked down. We know where to have it. But mercy is of indefinite and rambling meaning." "Oh, my dear father!" replied the daughter, "it grieves me indeed to hear you talk thus—contradicting all the pleasant and sweet lessons of benevolence which I heard from my dear departed mother: it pains me to the heart to hear the people almost curse you." "They are foolish to curse me, Margaret; it does them no good and me no harm." Margaret turned away her face and wept; and while her tears continued to flow, and her sobs to be heard, her father was silent; but when the passion of her sorrow was abated, he renewed the conversation precisely in the same tone and with the same purpose, saying, "My child, I would fain have you go with me to the Mansion-house, where the aldermen are examining prisoners. You must give your testimony according to the best of your ability." The tears which Margaret had shed, while they relieved her grief, abated the firmness of her resistance to her father's will; and she replied, "If it be your pleasure, sir, that I should accompany you, my duty as a daughter

* "It is traditionally said, that a military chest of money was left at the house of one Robert Parlow, where Hampden lay that night, and that it was never called for after; by which means, Parlow was enabled to bequeath a liberal legacy to the poor of that parish. On every anniversary of his funeral, Nov. 19th, a bell tolls in Watlington, from morning till sunset, and twenty poor men are provided with coats. These particulars I derive from the intelligent Mr. John Badcock, for forty years a resident at Pyrlton and its neighbourhood, but now of St. Helen's, who wrote, in 1816, a very ingenious little History of Watlington."

compels my obedience; but I must say, that no consideration shall make me give testimony in a doubtful matter.' 'The testimony required of you will be according to the conviction of your own mind. Besides, in the present case you will not be upon your oath.' 'My dear father,' replied Margaret, 'I always speak as though I were upon oath.' 'In so doing,' replied her father, 'you do wrong.' The daughter echoed the usurer's words with astonishment; and the callous man coldly proceeded—'Yes, my child, you do wrong; you diminish, you destroy the peculiar sanctity of an oath by such a proceeding. Only imagine for a moment how inefficacious the law would be, if every one acted upon the principle of being no more bound by an oath than without one.' 'But think again, sir, how much better than many laws, would be the universal prevalence of the love of truth.' 'You are supposing, my child, what can never take place. Besides, it would be inconvenient—very inconvenient. It is enough that a man can be believed on his oath; that is all the law requires—all that can be expected of us in this imperfect state. You will go with me, Margaret.' 'I will go with you, sir, but the conscientiousness that makes me obey you in this instance, will make me disobey you if you request of me any testimony which may destroy a life which the withholding of that testimony may save.' 'Child, you have strange notions.'

His death-scene is too striking to be omitted: we should mention that his daughter has married to his displeasure.

"Margaret revisited the sick man's apartment, and, as before, saluted him affectionately, and spoke to him kindly, tenderly, and considerately; so that if he had been at all susceptible of feeling, she must have awakened some emotion in his breast; but the ice had entered his soul—his heart was frozen to the very bottom. His daughter desired the nurse to bring the family Bible. It was a ponderous volume, with dark binding and strong brass clasps, looking more like a miser's chest than a domestic book of daily use. The usurer looked earnestly at the book as it was placed on the table before Margaret; and the affected daughter thought that she saw in that look a symptom of the breaking-up of the frost of his soul; so she moved the table nearer to him and took her seat at his side, and began to open the book; but his feeble hand was stretched out to prevent her, and his imperfect articulation uttered—'No, no—touch it not—it is my book.' 'Yes, sir,' said Margaret, 'it is your book.' 'There is a treasure in that book,' he said. Then was the soul of Margaret lighted up with hope, and there were sweet tears starting from her gladdened eyes, and she repeated her father's words, saying—'There is indeed a treasure in this book; I wish to make you aware of the value of the treasure. There is a treasure of consolation which I would fain open to you. Shall I read to you?' 'No, no,' said he, hastily interrupting her, 'you shall not open it;' and then he laid his feeble, trembling hand upon the book as firmly as he could, so that Margaret could not open it without forcibly removing his hand. She attempted to remove it gently, but it resisted her attempt. Margaret then looked doubtfully in her father's face, fearing that his reason was not right in its action. 'Surely, sir, you will suffer me to read to you.' 'No, I say, no—you shall not touch the book—it is mine.' 'Does the sight of the book disturb you, sir?' 'No, no—I love it.' 'What mean you, then, by not permitting me to open it?' 'You want to rob

me—you come here to plunder me; I will make a will, and if you rob me, my executors shall prosecute you; you think I am dying, and that you will possess yourself of my money—no, I tell you no, I will do as I will.' 'Dear, dear father,' said Margaret, 'your mind is wandering. Oh! why will you think so much of money?' 'What else is worth thinking of? No, you shall not have my money. Go back to Italy, and let me keep what I have got. You trouble me greatly.' 'Oh, sir, how sorely do you trouble and distress me! I am not thinking of money—I was not speaking of money; I was merely wishing to open the Bible and to read to you.' 'Ay, but there is money in that Bible. There are bank notes in it to a large amount. Give it to me.' Margaret pushed the table nearer to her father, and offered to unclasp the book for him. He quickly and angrily said, 'You shall not touch it.' He attempted to open it for himself, but his fingers trembled, and there was no strength in his hands. He would not be assisted, but he persevered a long time in his feeble attempt, which at length was successful. He then took from between the leaves of the Bible several bank notes, which he placed on the table before him; and while one hand was employed in arranging them before his eyes, he kept waving the other hand to keep Margaret from approaching. 'It is all mine,' said he, 'and the law will protect me in the possession of it as long as I live. You must not come near it.' 'And now, sir,' said Margaret, 'that you have taken the notes away, will you permit me to take the Bible and read to you?' 'No, no,' said the usurer, 'it is my book, you shall not read it.' 'I would read it, sir,' said Margaret, 'for your instruction and consolation.' 'I do not need any instruction or consolation,' replied the usurer. 'And pray how came you to know that there was any money in the book?' 'I did not know it,' said Margaret; 'and you have astonished and grieved me by producing it.' 'Yes, yes, you must have known it, or you would not have called for the book. Go back to Italy, go—you shall not have any of my money; I can make a better use of it.'

"On the following day, according to her promise, Margaret presented herself at her father's house, and found him still living, but manifestly sinking rapidly. He was in his bed, but restless. His mind, the nurse said, had been sadly wandering; but all the talk on which he had been exerting his feeble remnant of the power of speech, was concerning money. Upon his bed and upon the pillows of his bed there lay his books—the only books in which he felt any interest, or to which he had ever paid the slightest attention. There were also several bags of gold coin, which he gathered close up to himself, ever and anon pressing them with his long attenuated fingers, as if to be sure that he possessed them. Now and then he would try to lift one up in order to look at it more closely, placing it between his eye and the light, and it would fall from his feeble grasp, and then he would utter a slight hysteric shriek, and he would feel about for it with a trembling hand, and be in an agony till he had grasped it again. So melancholy a sight as this, produced on the mind of his afflicted daughter a sensation of almost horror. It was a scene too hard for tears. As Margaret approached the bed, Mr. Erpingham looked earnestly at her and said, 'Who is that?' 'It is I, sir, your daughter Margaret, come to crave your forgiveness and your blessing.' 'I will not forgive you—I will not bless you—you shall have none of my money. All these bags are

mine. Keep away—keep away—don't touch them—you are too near.' 'I wish only, sir,' replied Margaret, 'to hear you say that you forgive me, and that you will give me your blessing.' 'No, no, you do not want to have words—forgiveness and blessing are only words—you do not want them. You want my money. If I forgive you and bless you I must give you money, which I will not do. No—no—no.' Margaret in an agony and tearless grief, knelt down near the bedside and prayed aloud. Her father looked, or rather endeavoured to look sternly and forbiddingly at her, but his sight failed him, and he heard her voice, but saw her not. He was restless and angry for a while, and then he resumed his amusement of grasping and endeavouring to count the bags that were about him on his pillow. He again grew impatient, and called Margaret by name. Then she rose from her kneeling position and went close to the bedside and took her father by the hand and said, 'I am delighted, sir, to hear you call me by name. You will speak kindly to me.' When the usurer felt the pressure of his daughter's hand, and perceived that she was very near to him, he suddenly snatched his hand away from her grasp and said, 'Go—go—you want to rob me.' 'I came, sir,' replied the daughter, 'at your call.' 'And I called you,' said he, 'that you might cease the annoyance of your prayers.' 'Oh, sir, my heart bleeds to hear you speak thus. How long will you resist the impressions of humanity and good feeling? The world is departing from you.' 'Yes, I feel it is,' said the usurer; 'but I will clasp to it till the very last. I will not part with my money. It is all mine—mine—mine own.' 'Surely,' said Margaret, lowly and faintly in a kind of soliloquy, 'his senses fail him. This cannot be the language of intention and reason.' 'But it is,' said he, hastily; 'it is the language of reason, I know what I say. I have never been deceived by words, through the course of my life. I will not be deceived by words now that I am drawing nigh unto death.' Tears came at length to the relief of the afflicted daughter, and she withdrew from the bedside and sat at a little distance, watching the ebb of life. Her prayers were now silent, but not the less fervent for their silence. The minutes passed painfully, and Margaret sat absorbed in thought, in momentary expectation that the pulse of life would stand still. Scarcely did she dare to speak or even breathe. For more than two hours the afflicted daughter sat watching the hard breathings and convulsive exertions of her dying father. There was now no hope of any relenting, or of any expression of kindness, for the faculties were going. Conscientiousness was passing away, and the world was receding. Margaret looked so earnestly and so intently, that her own faculty of observation was benumbed; and though her eyes were directed to her father, they were as though they looked only on vacancy. From this reverie she was awakened by a slight exclamation from the nurse, who hastily cried out—'He's gone!' Margaret started up and rushed towards the bed. Life was extinct. The hands were clenched, grasping the bags of gold; and his death was as his life had been, in the midst of unenjoyed wealth."

Another well-sketched character is Lord Singleton, cautiously treading

"The quicksand path that leads from fault to crime," and turning to look back at every step. The interest and mystery of the story are well kept up; and the *Usurer's Daughter* will, we think, be a favourite with the public.

Memoirs of the Duchess d'Abrantes.

[Third Notice.]

A CONVERSATION with Junot, in the *Jardin des Plantes*, presents itself to us as worthy of extract, as throwing a light on the early family history of the Buonapartes.

"It was a delicious evening, and a thousand rose-trees, in full bloom, scattered perfume through the air. The two friends walked together arm in arm, and in confident conversation: they were then in closer communion with each other than they ever were afterwards in a gilded cabinet of ten feet square. A lovely night has always a powerful influence on minds susceptible of ardent feeling. Bonaparte was afterwards governed by an overpowering passion, which subjugated every other within him, and reigned paramount—I need not name it. But at this period he was very young, and his heart beat warmly, for he loved. He made Junot his confidant, and spoke on the subject with much acerbity, for his love was not returned. Junot has often told me, that if Bonaparte had not himself torn asunder the fetters which then bound him, the consequences of his passion might have been terrible. On this occasion his voice trembled while he expressed his feelings, and Junot was deeply affected by his emotion. But it was even then plain that there was within him an extraordinary force, which struggled against his weakness. He broke off the conversation himself, and appeared to have forgot the cause of his agitation. Confidence creates confidence. Junot had also a heart full of things which he wished to disclose to a friend, and the ear of Bonaparte had already heard his story. Junot loved, to infatuation, Paulette Bonaparte. In his youth, and with his warmth of feeling, he could not withstand so charming a creature as Paulette then was. His passion was a delirium; but his secret was not a week old when it was made known to his general. Honour commanded the disclosure, since his reason had not enabled him to resist his passion. Bonaparte received his declaration neither with assent nor dissent. He consoled him, however. But what gave him more satisfaction than all the words of his friend, was a belief amounting almost to certainty, that Paulette would say—*Yes*, with pleasure, as soon as he should be able to offer her an establishment, not a rich one, as Bonaparte used to remark, but sufficient to be a security against the distressing prospect of bringing into the world children destined to be miserable. . . . On leaving the *Jardin des Plantes*, they crossed the river in a boat, and passed through the street to the Boulevard. Having arrived in front of the Chinese Baths, they walked about in the opposite alley. While ascending and descending this part of the Boulevard, Bonaparte listened attentively to Junot; but he was no longer the same man as when under the odoriferous shades they had just quitted. It seemed that on returning to the bustle of life—the tumult of society, he resumed all the fetters and obligations imposed by the state. His manner was, however, always kind. He only pretended to give advice. 'I cannot write to my mother to make this proposal,' he said; 'for you are to have at last, it seems, 1200 livres of income, and that is very well; but you have not got them yet. Your father wears well, my good fellow, and will make you wait a long time for your livres. The truth is, you have nothing but your lieutenant's pay; as to Paulette, she has not so much. So, then, to sum up—you have nothing, she has nothing. What is the total? Nothing.

You cannot, then, marry at present. You must wait. We shall perhaps see better days, my friend—*Yes!* We shall have them, even should I go to seek them in another quarter of the world.'"

Proposition of marriage by Buonaparte.

"Such, then, was my brother, when Bonaparte proposed to my mother a match between him and Mademoiselle Pauline Bonaparte, called by her family and all her friends *Pretty Paulette*. This proposal he followed up by the plan of a second alliance between me and Louis or Jerome. 'Jerome is younger than Laurette,' said my mother, laughing. 'Indeed, my dear Napoleon, you are acting the high-priest to-day; you are marrying every body, even children.' Bonaparte laughed too, but with an air of embarrassment. He admitted that when he got up that morning a marriage-breeze had blown upon him; and, to prove it, he added, kissing my mother's hand, that he had made up his mind to ask her to commence the union of the two families, by a marriage between him and herself, as soon as a regard to decency would permit. My mother has frequently related to me this extraordinary scene, so that I am as well acquainted with it as if I had been the principal actress in it. She eyed Bonaparte for some seconds with an astonishment bordering upon stupefaction; and then burst into so hearty a laugh, that we heard her in the next room, where there were three or four of us. Bonaparte was at first much vexed at this manner of receiving a proposal which appeared to him quite natural. My mother, who perceived it, hastened to explain herself, and told him that it was she, on the contrary, who in this affair played, at least in her own eyes, a perfectly ridiculous part. 'My dear Napoleon,' said she, when she had done laughing, 'let us talk seriously. You fancy you are acquainted with my age. The truth is, you know nothing about it. I shall not tell it you, because it is one of my little weaknesses. I shall merely say, that I am old enough to be not only your mother but Joseph's too. Spare me this kind of joke; it distresses me, coming from you.' Bonaparte assured her over and over again that he was serious; that the age of the woman whom he should marry was indifferent to him, if, like herself, she did not appear to be past thirty; that he had maturely considered the proposal which he had just made to her; and he added these very remarkable words: 'I am determined to marry. They want to give me a woman who is charming, good-tempered, agreeable, and who belongs to the Faubourg St. Germain. My Paris friends are in favour of this match. My old friends dissuade me from it. For my own part, I wish to marry; and what I propose to you suits me in many respects. Think about it.'—My mother broke off the conversation, telling him, laughingly, that for her own part she had no occasion to think any further; but, as to what concerned my brother, she would speak to him about it and communicate his answer on the Tuesday following—it was then Saturday. She gave him her hand, and repeated, still laughing, that though she had some pretensions, they did not aspire so high as to conquer the heart of a man of twenty-six, and that she hoped their friendship would not be interrupted by this little affair. 'At any rate, think of it,' said Bona-

* "I have described this conversation fully, as Junot related it, because I think the conduct of Bonaparte during the evening in which it occurred was very remarkable. Junot recollected all that passed minutely, and could point out the part of the Boulevard on which they were when Bonaparte spoke these words, which posterior events have rendered so worthy of notice."

parte. 'Well, well, I will think of it,' replied my mother, laughing as heartily as before. I was too young to be made acquainted with this conversation at the time when it occurred. It was not till my marriage, that my mother related to me the particulars as here detailed. My brother made a note of this singular affair. Had Bonaparte's overtures been accepted, he would never have become what he afterwards was. When Junot heard of it, he told us that the thing appeared less extraordinary to him than to us. About the 13th Vendémiaire, Bonaparte had got himself appointed to some committee of war; I know not what the appointment was, but it was no great thing. His plans, his schemes, had all one object, one direction, which tended towards the East. The name of Commene might have a powerful interest for an imagination that was eminently creative; the name of Calomeros joined to that of Commene might be of great service to him. 'The great secret of all these matches lay in that idea,' thought Junot; and I think so too."

Soon after this, a very silly quarrel occurs, owing to a delay in granting a commission, in which it appears to us that only the lady is to blame. Madame Junot will insist that Bonaparte retained a secret rancour against her mother; we can only say, that kindness and attention was a singular method of shewing it. Take the following passage as an example, after Bonaparte's return from his Italian victories:

"But one of the most magnificent entertainments, and, above all, one of the most elegant in its magnificence, was that given by M. de Talleyrand, at the office for foreign affairs. He always displayed admirable skill in the arrangements of the entertainments which he gave: indeed, when a man possesses good sense, he shews it in every thing he does. He then resided at the Galiff Hotel, Rue de Bac, and though the rooms were too small for the company assembled there that evening, the *fête* was admirable. All the most elegant and distinguished people then in Paris were there. My mother was absolutely bent on going. She was not quite well; but when she was dressed, and had put on a little rouge, she looked enchanting; and I can affirm that I saw that night very few women who surpassed her in beauty. We were both dressed alike, in a robe of white crape trimmed with two broad silver ribands, and on the head a garland of oak-leaves with silver acorns. My mother had diamonds, and I pearls: that was the only difference between our dress. In the course of the evening, my mother was walking through the rooms, arm in arm with M. Caulaincourt, senior, on one side, and me on the other, when we found ourselves face to face with General Bonaparte. My mother saluted him, and passed on, when the general advanced a few steps, and spoke to her. My mother was, in my opinion, perhaps rather too dry: her ill humour was not yet quite dispelled, but in her excellent heart there was nothing like rancour. It was the reverse with the general. Be this as it may, he appeared to look at my mother with admiration. Indeed, that evening in particular she was truly captivating. The general spoke in a low tone for some seconds to the Turkish ambassador, whom he held by the arm. The Turk uttered an exclamation, and fixed upon my mother his large eyes, to which, when he chose, he could give a look of stupidity, and then made a sort of obeisance. 'I told him that you are of Greek extraction,' said Bonaparte to my mother, saluting her by way of an adieu. Then, holding out his hand, he pressed her's in a friendly manner,

and left us after a short conversation, which, nevertheless, drew the attention of the company to us, though it lasted but a few minutes."

The following remark shews at what an early period Napoleon felt that confidence in his destiny which so long made its own truth: they had been speaking of Salicetti.

"A smile passed rapidly over the lips of Bonaparte. 'He wished,' said he, 'to ruin me, but my star prevented him. However, I must not boast of my star; for who knows what may be my fate.'"

Change in Bonaparte's personal appearance. "At that period of his life, Bonaparte was decidedly ugly. He afterwards underwent a total change: I do not speak of the illusive charm which his glory spread around him; but I mean to say that a gradual physical change took place in him in the space of seven years. His emaciated thinness was converted into plumpness; and his complexion, which had been yellow and apparently unhealthy, became clear and comparatively fresh. His features, which were angular and sharp, became round and filled out. As to his smile, it was always agreeable; the mode of dressing his hair, which now has such a droll appearance as we see it in the prints of the passage of the bridge of Arcola, was then comparatively simple; for the *muscadins*, whom he used to rail at so loudly at that time, wore their hair very long. But he used to be careless of his personal appearance, and his hair, which was ill combed and ill powdered, gave him the look of a sloven. His little hands, too, underwent as great a metamorphosis as any other part of his body. When I first saw him, they were thin, long, and dark; but he was subsequently vain of the beauty of his hands, and with good reason. In short, when I recollect Napoleon entering the courtyard of the Hôtel de la Tranquillité in 1795, with a shabby, round hat drawn over his forehead, and his ill-powdered hair hanging over the collar of his grey great-coat—that great coat which afterwards became as celebrated as the white plume of Henry IV.—without gloves, because he used to say they were a useless luxury, with boots ill made and ill blackened, with his thinness and his sallow complexion—in fine, when I recollect him at that time, and think what he was afterwards, I do not see the same man in the two pictures."

The victories, public acts, &c. have been so often narrated, that we prefer scenes from private life; and will devote, if we can find room, a future notice to them.

Standard Novels, No. X. The Ghost Seer, Vol. II.; and Edgar Huntly. London, 1831. Colburn and Bentley.

SCHILLER's singular and striking narrative is here concluded; and the character of the Armenian, as further developed, is one of the most extraordinary conceptions imagination ever suggested, or writer ever analysed. It is quite impossible, in our limits, to attempt the unravelling of the many mysteries; we shall, therefore, content ourselves with one or two brief observations from its pages. We need only point attention to the following.

"Self-love, as long as it does not become self-admiration, and consequently a vice, is the first and most distinguished principle which the wise Creator has implanted in us. From it we derive all our actions, even the most sublime ones which approximate us to the Divinity: we admire a friend for the return of his affection; we love our relations; we assist the sufferer,

and often save the lives of our neighbours, even at the greatest hazard, because we expect the same treatment in similar situations; we pardon our enemies, for the sake of those heavenly feelings which tell us that we have acted nobly, and have advanced a step towards perfection! But how often does man act well, and is unknown; and how often has the best design a false operation; how often the good man suffers because he acts consistently with his feelings! Shall he, for that reason, discontinue his efforts? No—he ought not to do it, even if his religion did not promise him a recompense in another world, if it did not tell him, 'Thy Creator knows the goodness of thy heart—the Lord knows it, if men do not acknowledge it.' But I do not think, my friends, that I ought to allow man so much virtue as to suppose that he acts uprightly merely for its own sake; for we are never free from the influence of our passions, which throw obstacles in our way, in spite of all our endeavours to avoid them. Can we blame him who prefers the enchanting path of vice to that of virtue? Look into your own hearts, and answer me that question. But when Religion intervenes, she tells us, with certainty, that there is another life beyond the grave, in which men will be rewarded according to their deserts. What an inducement is this for us to become better, and faithfully to fulfil all our duties! what a great consolation, when we labour under misfortunes, to be able to say to ourselves, 'Our life in this world is but a pilgrimage to the realms of everlasting peace!' With what anxiety does the tired wanderer endeavour to reach the place of his destination, though he knows that the break of day will call him forth to the continuation of his journey! how cheerfully he supports fatigue and trouble, when he recollects that he is pursuing the path which leads him to his home, where he will meet his friends and relations! Can we then do less, my friends, when we know that eternal joy will be our recompense, and that we shall approach nearer to that God who gave us friends and relations, who watches over the smallest circumstance of our fate, and even fastens the chain of our happiness on that which seemed to us to be unpropitious to it?"

Human credulity is justly weighed in the ensuing remark.

"Consider for a moment what an effect the miraculous produces, if it is skillfully managed. It is but natural to expect great things from him whom we once have seen perform a miracle; at least we do not doubt the want of ability, but conclude that he begins and ceases at pleasure.

"From my own experience, alas! I learnt that a villain is not loved by his fellow; and that those ties which bind the hearts of others with such firm affection are to them unknown. What causes them to unite together? What renders them inseparable from one another? What makes one submissive to the other? Nothing more than self-interest. If this should be once satisfied, all bonds would break, and each would, with indifference, see the downfall of his companion, and rejoice if he could derive a profit from it."

Edgar Huntly is the second tale in the book, the best and most powerful story ever produced by the American novelist. It is an imitation of *Godwin*, which, from new scenery, is almost original. Mystery and terror are the two great principles, and these are most successfully awakened.

The History and Antiquities of the Parish and Church, &c. of St. Michael, Crooked Lane.

Part I. 8vo. pp. 80. London, 1831. Harvey and Darton; Smith and Elder; Arch and Co. THIS work is intended to trace the history of the church and parish, of which not only is there scarcely any thing in print, but which has been supposed to furnish nothing,* though connected with the ancient Saxon market of Eastcheap; and from the numerous Roman antiquities lately excavated, there is every reason to suppose the spot densely populated in the Roman times, and consequently of higher origin than any other in the metropolis. Its remarkable appropriation in after-times to the business of the stock-fishmongers connected it with the names of Sir William Waltham, and a host of eminent citizens of that trade. Its church at this time was collegiate, magnificent, and full of splendid monuments. The well-known Boar's Head Tavern, more than, perhaps, any other circumstance, contributed to give it a general interest, and must as long as the name of Shakespeare lasts. Nor is it less in point of interest, that the centre of the parish now forms part of one of the greatest improvements known to modern times, the grand approach to the New London Bridge; the excavations for the construction of which have been a fertile source of discovery, and contributed more than any of late years to illustrate the ancient metropolis.

Besides the particulars enumerated, many illustrations of old manners, old buildings, and old times, with several graphic embellishments, will give it more than a local interest, and make it worthy of encouragement to its spirited proprietor, Thomas Saunders, Esq., the solicitor to the parish, who has shewn much zeal for preserving every record worthy of notice.

We must, before closing, warn the author, that "lay" for "lie," page 21, is an intolerable vulgarity.

Watts's Songs, Divine and Moral. Pp. 96. London, C. Tilt.

A NEW and pretty edition of *Watts's Hymns*, the poetical and religious character of which is too well known to need our report at this time of day.

1. *Law and Commercial Daily Remembrancer*, (two Editions); and 2. *Housekeeper's Account Book*, for 1832. London, Dunn and Son.

WE last year noticed the utility of these well-arranged publications for making and preserving the daily memoranda of the year; and we have now only to renew our praise of those of a similar kind for the coming 1832. In the first, the mass of legal and commercial reference is ample; and in the last, great facilities for accuracy in housekeeping accounts are afforded.

Considérations Statistiques, Historiques, Militaires, et Politiques, sur la Régence d'Alger. Par le Baron Juchereau de Saint-Denis. Paris, 1831. Delaunay.

IN the midst of the important events which occupy so much of the public mind, our attention is nevertheless called to a publication of much interest, from its probable future consequences, relating as it does to the conquest and proposed colonisation, by France, of an extensive region, situated in one of the most tem-

* It is editing by Mr. Herbert, the city librarian, who has manifested great industry and research in consulting the most original authorities. This gentleman is already known to the public in several topographical works illustrative of the metropolis.

perate and healthful climates of the world, anciently the richest and most populous portion of the Roman empire—we allude to the regency of Algiers, with which we are made better acquainted by the perusal of this volume, lately published in Paris. The author, the Baron Juchereau de St. Denys, is well known in France, and by foreigners employed in the diplomatic service, as the author of the work on the Revolutions of Constantinople; and as having been the French Diplomatic Agent in the Greek Islands. He commences by a succinct, but explicit, statement of the physical and political geography of that part of the northern coast of Africa now occupied by the French. This is followed by some historical remarks, including an able and animated account of the military operations of the French army during the late expedition. To which are added, what perhaps by many will be thought the most important part of the book, observations on the political interests of the European States, with respect to the Regency of Algiers.

A map of the Regency, framed expressly for the work, is attached.

The Robbers. By the Author of "Chartley." 3 vols. 12mo. London, 1832. Bull.

A VERY great improvement on its predecessor. The present is an historical novel, laid in the stirring times of the Spanish war in the Netherlands. The first two volumes are very spirited; but there is a deficiency of incident in the third; while the marriage of Isabel pretty well terminates the interest. The cautious M. Andelot is a very happily sketched character; and there are some well-managed hair-breadth escapes.

ARTS AND SCIENCES.

THE POOR.

THIS is not, perhaps, a time when the quiet philosophical voice of improvement will be listened to with the best chance of being heard; but we do trust that, even amid the turmoil of Reform (which reform cannot, in many desirable respects, do what other less-contested means may accomplish), the propositions of Mr. Sadler, in the House of Commons on Tuesday, for ameliorating the condition of the poor, will not be hung upon a rusty nail and thought of no more. With all our advantages, we are a strange people; and the schoolmaster has not been long enough abroad to teach us wisdom. There must be a grand excitement to produce any considerable effect amongst us, whether it be right or wrong, for good or for evil; while the most self-evident plans of relief and benefit are talked about and thrown by like waste paper. Ten times the reform proposed in parliament, cannot in five hundred years produce so much actual comfort and happiness to the people, as several other single and simple remedies would immediately produce. A reform in the civil law and its administration would take a heavier tax off the community than all the burdens of government; besides preventing an incredible amount of oppression, demoralisation, and misery. The criminal law is equally defective, but its operation far more confined. A just commutation of tithes, and two or three slight measures of internal regulation, would remove from the church much of the odium now heaped upon it, and much of the danger with which it is threatened. But these and other improvements have not, like Catholic, Slavery, and Reform questions, the fortune to be made party contests for power and

place, and the multitude stimulated for and against them: they, therefore, form dull episodes in parliaments and pamphlets, obtain a momentary notice, and fall asleep on the public ear and understanding.

Among the prominent of such cases are the attempts to provide for the wants of the poor, and to raise the lower classes, whether agricultural labourers or industrious mechanics, to a state in which they may be enabled to provide for their own sufficient maintenance. It is to be regretted, that for this purpose several excellent plans have been proposed; and the consequence has been controversy as to which was the best, every man sticking by his own project, instead of a calm investigation, which would have shewn that each in its kind and sphere must have contributed to the sole end in the view of all. Thus, for instance, emigration has been maintained against spade husbandry, as if the two were incompatible and opposite; whereas the removal of two or three thousand persons from the home counties last year (either abroad or to manufacturing districts, as might be), would have mitigated all the distress they suffered; and some five hundred unprofitable acres appropriated to allotments and cultivation would have provided abundantly for the remaining population.

We have often, and again we most earnestly recommend the latter mode of providing for the poor to our benevolent readers who possess the power of trying the experiment. Wherever it has been tried, the effect has been incalculable; and, as Lord Althorpe observed, it is far more likely to prosper in the hands of individuals than as an act of government. From having, through the medium of the *Literary Gazette*, endeavoured to rouse the public to a sense of the importance of this subject, we have received a multitude of communications upon it, which might tempt us far beyond the space we can properly allot to any discussion not strictly connected with literature; but we can only treat it as a branch of political and economic and philanthropic science, and in this light we must not trespass too much. Yet we will venture a few data and remarks.

According to the evidence of Mr. William Cowling before the emigration committee in 1827, it appears that the whole contents of land in Britain and Ireland and the British isles, are 77,394,433 acres, of which quantity only 46,522,970 can be said to be cultivated; 15,000,000 are waste, and 15,871,463, are said to be unprofitable. Thus nearly half of the land which Providence has given us for our support and maintenance is neglected: and though no agriculturist, without a large capital, can cultivate any great quantity of such land, yet thousands of industrious labourers could derive maintenance and comfort from having each a small portion of it. By their own work they would be enabled to live comfortably. As a result, we have been told that several of the metropolitan parishes are anxious to remove their poor from the unhealthy and immoral atmosphere of a workhouse in the metropolis, to some situations in the country where they may be employed in agriculture,*

* To promote this design, the *Labourers' Friends' Society*, in which there are several members of both houses of parliament, has been formed for the purpose of promoting the enclosure of the waste lands, and especially of those in the vicinity of the metropolis, of which there are above 20,000 acres, including Epping Forest and Bagshot Heath. They are of opinion that the cultivation of this waste land, and affording employment and provision to the labouring poor, is far preferable to the system of emigration, which, whilst it deprives us of our best agriculturists and artisans, men who, if encouraged at home, would increase our strength and prosperity, leaves us the idle, profligate, and factious,—a disgrace to their

by which, food, the great object of human labour, may be obtained; while by industry of any other kind it can only be obtained indirectly and by means of exchange. This is further shewn by Sir John Sinclair, who contends, that the poor in the metropolis and other large towns cannot be advantageously employed in trades and other manual occupations, without injury to others whose subsistence depends upon this species of labour; whereas, by providing the food of man, no individual can be injured, but the whole community benefited.

"The Chinese," says a writer, (in, we think, a Cambridge paper) "with a population three times as dense as our own, forbid all emigration, yet find ample employment and provision for all. We are told that the poor's rates will eventually absorb all the land in the country. I refer them to such parishes as have freely tried the cottage system and spade husbandry, and there you will find that labourers are not burdensome, and the poor's rates low and still decreasing. We are told all this looks very well in theory, but cannot be reduced to practice; but I meet the broad assertion by referring to an authenticated case—the labourer's name and address I leave with the editor. His account current for the present year stands thus: half an acre of land, at 50s. per acre, including all rates, &c.

Dr. to Seed, &c. £. s. d.	Cr. by Crop. £. s. d.
Seed Wheat..... 0 5 0	6 Bushels of Barley
" "..... 0 2 6	at 5s. per bushel 1 10 0
Ditto Barley..... 0 13 6	48 ditto of Wheat,
Ditto Potatoes..... 1 0 0	at 8s. ditto..... 1 18 0
Labour (his own)..... 1 5 0	100 ditto of Potatoes,
Rent..... 1 5 0	at 1s. ditto 5 0 0
£3 6 0	
	Deduct expenses .. 8 8 0
	3 6 0
	Clear gain to the
	Labourer..... £5 2 0

Besides the above profit, his quarter of an acre of white corn stubble is now at liberty for a crop of winter vegetables, to come off in time for the next potato planting."

Lord Suffield, in his charge to the quarter sessions for the county of Norfolk, March 10, 1831, says,—"The only parish in my neighbourhood in which the poor's rate has not increased enormously within the last thirty-six years, is one in which almost all the poor inhabitants have had small portions of land attached to their cottages; the rate here has in thirty-six years increased four-pence per acre, while in some of the parishes adjoining the rate has been doubled, and even tripled. I shall extend this system as speedily and as widely as possible on my own property. Last week I was much occupied in making such allotments; the quantity of land generally required is half an acre; labourers to ditch out the land for themselves, the parish to dig the land and seed it once, the parish to find a pig, which will cost from eight shillings to ten, to be repaid when the crop is sold; the rent at first to be the same as the last occupier, (the farmer). The condition I exact is, that the pauper shall give up all claim on the parish for relief after the crop is sold. These terms have been joyfully accepted by every one to whom

country, and a burden to the poor's rates. Surely, it would be much more politic to find work for the whole of our population, and endeavour to reclaim the idle and the profligate by affording them employment. The question is, have we the means? It has been justly remarked, that an increase of population may be deemed a dreadful evil or a solid good, according to the circumstances of the country in which it occurs. If a commensurate increase of food and raiment can be produced by agriculture and manufactures, an accession of consumers in the home market cannot but be beneficial to all parties; and the increase of population, in such a case, may be deemed equally desirable in itself, and conducive to national strength and national prosperity.

they have been proposed; the banks are raised with a zeal and alacrity which it is delightful to behold; and whence does this arise? Simply from the circumstance that the men for the first time work on their own account."

SOCIETY OF ARTS.

THE reports read to the Society on Wednesday, were, on a clamp for boot and harness makers; a method of lighting gas-lamps; an apparatus for dry-grinders; a trap for vermin; a life-buoy; a life-boat; and a method of gauging the contents of standing casks. The whole of which, with the exception of the last mentioned, possessing no particular advantages, were not considered worthy the further attention of the Society.

The Society, as is usual at this time of the year, adjourned for the Christmas holidays.

The members will re-assemble on the 10th of next month, when a course of illustrations on subjects connected with the arts, &c. will commence. Eight evenings, during the session, will be so appropriated; and the subjects already arranged are, on the various styles of engraving, and their application to the representation of historical subjects, landscape, &c.; on coals; on fuel—its direct application to domestic, culinary, and manufacturing purposes; on fuel—its application through the medium of heated air, steam, and hot water; on Gothic architecture, and the origin of the Gothic arch; on the turning-lathe; and on the manufacture of horn and tortoise-shell.

LINNEAN SOCIETY.

A. B. LAMBERT, Esq. in the chair.—Another portion of Mr. Ogilby's paper on the history and distribution of marsupial animals was read. Several fellows were elected. Mr. Cox exhibited a drawing of a branch of a peach-tree bearing a peach and nectarine, produced, naturally, in the garden of Mr. Wheeler, Gloucester Place, last year; thus shewing that the peach and nectarine are mere varieties of each other.

GEOLOGICAL SOCIETY.

DEC. 14.—R. I. Murchison, Esq. president, in the chair. Fellows were elected. A letter was first read from W. Bland, Esq. of Hartslip, near Sittingbourne, addressed to Dr. Buckland. This communication contained the result of the author's observations, for twelve years, on the variations in the depth of the water in the wells of the part of Kent in which he resides, and on the quantities of rain which fell during the same period. A paper on the stratiform basalt associated with the carboniferous formation of the north of England, by Mr. W. Hutton, was afterwards begun. Presents were announced from the Royal Society, the Royal Institution, Dr. Stillman of New York, H. T. De Beche, Esq. and others.

ROYAL GEOGRAPHICAL SOCIETY.

[Analysis of Col. Leake's paper read at the meeting, and referred to in our No. 774.]

THE only passage in history, Colonel Leake remarked, anterior to the time of the Roman empire, from which it may be concluded that the Quorra was then known, is a description given by Herodotus of a journey of discovery undertaken in his time by some of the Nasamones, a tribe which dwelt near the Syrtes. An association having been formed of the chief men of this tribe to prosecute discoveries in the Libyan Desert, five young men were chosen for the adventure; and after having passed the inhabited region (*oasis*), and the

country of wild beasts (*thynades*), which lay beyond it, they traversed during many days the great sandy desert in a westerly direction (*opis* *thynades*), until they arrived in a country inhabited by men of low stature, who conducted them through extensive marshes (probably a local inundation) to a river that produced crocodiles, and flowed towards the rising sun. And that this really was the Quorra seems certain, when it is considered, not only that it agrees with the description thus given, but also that it is the only river in North Africa which does agree in all points. It has been argued, indeed, that this narrative is a fable, and that the account of the river was merely picked up by these young Nasamones, or by some others, in one of the oases of the desert. But even in this case, a knowledge of its existence is thus demonstrated.

There would be great difficulty, indeed, in any way to believe that such civilised and commercial people as the Cyrenæan Greeks and Carthaginians should have remained to the last period of their independence ignorant of the Sudán, whence many most important articles of their commerce were derived, especially as we now know from Denham and Clapperton that no great natural impediments to communication exists on the route between Fezzan and Bornú. And it is still more improbable that the Egyptians should have been ignorant of the existence of such a river as the Quorra, when it is incontestable, from their monuments, that they carried their arms to a considerable distance in the Sudán; and an extensive commercial intercourse between the two countries seems an inevitable consequence of this circumstance, considering the advanced state of society and of the arts in Egypt at this period.

As to the Romans, besides that they inherited the learning of the Greeks, the frequent necessity of chastising the lawless tribes of the Libyan deserts inevitably led them to make frequent excursions into their territories; and existing monuments abundantly prove the extent to which these were carried. In the year 19 of the Christian era, for example, Cornelius Balbus triumphed at Rome for his conquest of the Garamantes; and among numerous places of which representative images were borne in the procession, Phenania now Fezzan, Garenna now Gherma, and Cydamus now Gerdames, are enumerated. Besides which, two several expeditions are on record of extreme interest in this investigation. Their date is uncertain, but they are cited by Ptolemy, on the authority of Marinus of Tyre, and are curiously illustrated by the discoveries of Horneman, Lyon, Denham, and Clapperton.

Of the first, under the command of Septimius Flaccus, it is only related that a three months' march from the country of the Garamantes into that of the Ethiopians was accomplished by it. The second, of which the particulars are given by Julius Maternus, who accompanied it, was an expedition sent by the king of the Garamantes to reduce his rebellious subjects in Ethiopia, which left *Leptis Major* (now Lebeda, near Tripoli), and after a march of four months arrived at Agisymba. In both instances the direction of the route is stated to have been due south, and in both the distance attained must have been very great. Most probably Agisymba was the present Bornú. From the expressions used, the road appears to have been well known and frequented. And the sovereignty of the Garamantes was familiarly recognised along its whole extent, comprehending, as there is reason to believe, the present Waday, and extending even to latitude

10° N., where a mountain was known by the name of *ἡ Γαμμανία τήρυξ*, or the Garamantic Ravine.

With these opportunities of acquiring a knowledge of the existence of the Quorra, then, it is scarcely possible to imagine that the Romans were ignorant of it; or that, knowing the remaining portions of North Africa so well as they did, their descriptions of the Niger, which are altogether inapplicable to any other river, should not have regarded it. It is true that their knowledge of it was imperfect, even as our own has been till within the last few months; and they were certainly ignorant of its ultimately turning south, and joining the western ocean. On the contrary, they frequently speak of it as a "river of the interior," which may be understood to mean beginning and ending without communication with the sea. And none of them thought it joined the Nile of Egypt, a magnificent idea especially patronised by the poets,—as Claudian, when he represents both the Girkhmi and Garamantes drinking of its waters:

"Hunc bibit infamis Garamas, dæmonisque ferax Girkhæus, qui vasta colit sub rupibus ætra,
Qui ramos ebent, qui dentes vellit eburos."

But the better informed were aware that this was not the case; even Claudian himself, in a graver composition—his poem on the first consulship of Stilicho—rejects the idea:

"Gir, notissimus annis
Ethiopum, amili mentibus gurgite Nilum."

And it seems most probable that they, for the most part, thought it was absorbed in one or more great central lakes, of the existence of which they were certainly aware, having named several, and in particular Lake Libya, which appears to be the Tchad.

The thanks of the Society were cordially voted to Colonel Leake, for his very interesting and instructive communication.

LITERARY AND LEARNED.

ROYAL SOCIETY.

H. R. H. the president in the chair. The communication read was an account of the volcano which broke out last year on the southern shores of Sicily. It was written by Mr. Dary, the brother of Sir Humphry, and embraced not only the author's remarks and opinions, but also those of Capt. Swinburne, H.M.S. *Rapid*. They observe, that the crater is only a few feet above the level of the sea. Previous to the eruption in June last, several shocks of an earthquake were experienced in the neighbourhood, leaving no doubt that the crater was then in operation. During the eruption Etna was more active than usual; at times a dense white vapour, like snow or wool, was thrown up to a great distance, and exhibited a very extraordinary appearance. This vapour disappeared before the wind, leaving behind a fine powder, having a strong saline taste, and a sulphurous smell. The author's results were all of a negative kind, and his details did not materially differ in character from the usual descriptions of these interesting phenomena. Sir James Graham was elected a fellow. There was exhibited in the library a very ingenious apparatus, called a "fire-sentinel." Its chief use is for detecting increase of heat in hot-houses. An air-filled glass bulb is fixed nearly in the centre of a box; passing under and in contact with the bulb is a column of mercury; when the fluid is acted upon by the heated air contained in the bulb, it rises to a certain point, and becomes the medium of communication with the hammer of a bell.

The meetings are adjourned till the 12th of January.

ROYAL ASIATIC SOCIETY.

COLONEL TOD, librarian, in the chair. Several donations of books were made to the library; among them was a fine copy of *Le Brun's Travels in the East*, 2 vols. folio, presented by T. H. Baber, Esq.; and pamphlets on the cholera, by Sir Gilbert Blane and Mr. Pettigrew.

Two papers were read: the first was a description of a new and distinct genus of quadrupeds—the “stag-sheep,” or *kalesatoo* of the Tamulians—by Dr. M. Christy, of the Madras establishment. This animal is extremely rare; it inhabits that range of mountains which separates the valley of Dindique from Malabar: its size is three feet nine inches long, one foot seven inches high before, and one foot nine inches high behind; the colour of the head and upper part of the body is of a deep reddish brown; the belly, inside of the legs and thighs, and the feet, white; the hair is short, but strong and wiry. Dr. Christy's account is drawn up from an examination of three specimens, viz. one male and two females.

The second paper was an account of the island of *Serasamodram*; and of two bridges, one of which is completed, and the other now building by the intelligent and wealthy Jaghirdar of the island, *Ramaswamy Moodeliar*. The first part of the memoir, which is written in English by the native just mentioned, comprises an account of the traditions to which the island owes its peculiar sanctity; and the latter part details the origin and progress of the enterprise undertaken by the writer, viz. that of clearing the island of the jungle with which it was covered, and constructing two stone bridges on pillars, one crossing each branch of the Caveri river. The works were commenced in 1819, and the first bridge was completed in 1821. Neither of the bridges is carried in a straight line across the river, but curved towards the stream, with a view to resist the floods to which the river is subject. The length of that which is finished is 1000 feet; breadth of the road-way, 13 ft.; height, including the foundation, 23 ft. It is supported by 400 pillars. The other bridge, it is expected, will be finished early in 1832. The whole of these works, undertaken by *Ramaswamy Moodeliar* for the public benefit, have been executed at his own cost, without the assistance of a single rupee from any quarter. The government of Madras have granted him the island and a small tract on the bank of the river, with the right of levying a trifling toll on the transit of goods, which is the only pecuniary remuneration he is likely to receive.

ROYAL SOCIETY OF LITERATURE.

Memoir on Panathenaic Vases, by the Chevalier Brünsted. Read at the Meeting of the 7th instant.

THE memoir bore particular reference to a collection of vases of that description, now being exhibited in London, of which several were produced at the meeting for inspection, as illustrative of the subject. A very fine one, of the same kind, belonging to Mr. Burgen, was likewise shown.

The official inscription found on these remarkable monuments formed the chief object of attention. This inscription has never hitherto been satisfactorily explained, because the question has never been considered in its real extent and bearings, which embrace a view of the principal institutions connected with the Panathenaic laws and festivals. The result of

M. Brünsted's researches may be thus shortly summed up.

1. The common official formula inscribed on these vases

(TONAGENESENAOON)

merely states, that the monument on which it appears is “(ONE) OF THE PRIZES FROM ATHENS,” which is strictly conformable to the simple language of remote antiquity, and to the nature of the Panathenaic contests, to which every Greek was admitted.

2. The inscription had a particular reference to the sacred oil contained in these vases, which was the principal object of the contest, and the prominent part of the prize. This oil was always, in all Panathenaic games, the produce of the holy trees dedicated to Minerva; and, of course, was not to be obtained any where but at Athens.

3. In consequence of the universal creed of the Greeks with regard to the sacred olive-trees, and of the oil obtained from them being exclusively Panathenaic, the Athenian government, and especially the Areopagus—to whom all legal power in that respect belonged—took the greatest care, by issuing severe laws, by appointing responsible farmers, under annual and monthly control of officers specially appointed, to protect and promote the proper culture of the sacred olive-groves, and to render their produce profitable to the state.

4. The writer, lastly, established the probability, that among the regulations concerning the traffic in the holy oil (for which article there was constant and considerable demand at Athens from every country where Panathenaia were celebrated), was this in particular—that none but the victors in those games should have a right to export the Panathenaic oil to foreign countries. The existence of such a law seems to be in harmony with the public rewards granted by the state to Athenian victors in other public games at Olympia, Delphi, Nemea, &c.

FINE ARTS.

NEW PUBLICATIONS.

Trio Trac. Painted by Teniers; engraved by W. Radlon. Leggatt and Co.

THIS well-known production of Teniers, which is mentioned with due praise by Smith in his Catalogue, has been transferred to copper with great spirit by Mr. Raddon. It is in the line manner, and free and bold in its execution. If we had the slightest fault to find, it might be that the back-ground appears to us to be a little too open, so as to interfere with the profile of the figure standing up on the right. But the work altogether is worthy of the best of the English school; and deserves a place in every good portfolio.

The Lame leading the Blind. Painted by C. Hancock; engraved by H. Beckwith. Harding. An excellent animal production of two dogs, which will forcibly recall the memory of Landseer, and not be greatly injured by a comparison even with that admirable artist. Being wire-haired terriers, we suppose must be the apology for a little wiriness in the execution: but there is no dog or print-fancier who will not like the Lame leading the Blind.

The Bitter Morning. Painted by R. W. Buss; on stone by Fairland. Ackermann.

THOSE who are fond of creature comforts, let them look on this! The lithography is beautifully executed; and the whole familiar scene of a fellow most unwilling to leave his warm bed, forms one of those subjects which are so

well calculated to please generally. According to Wilkinson's conundrum in the new piece at the Adelphi, the man, however, is not a man, for he is a-bed.

The Looking-Glass; or, Caricature Annual. London, M'Lean.

A VOLUME containing some three hundred caricatures, and in which the most prominent persons of the day, and the most striking events of our eventful era, figure under many a humorous form. The frontispiece represents the caricaturist, as Isaac Walton, fishing; and having caught many political characters, while others are swimming about in the shape of dabs, gudgeons, bream, &c. &c.; and throughout the entire work he has displayed a very prolific fancy, a rich vein of satire, and a clever style of execution. A more amusing book cannot be imagined for the dreary half, or sometimes whole hour, waiting for dinner; nor, indeed, for any period of ennuyant leisure. For here, at least, we can laugh at Reform and Cholera—disregard the evils, and enjoy the follies, which elsewhere scare and fatigue us. From such a number it would be inexpedient to particularise, and we shall therefore only add, that nearly all the subjects are entertaining, and not a few of them very witty and ludicrous.

Under the Patronage of His Majesty. Gallery of the Society of Painters in Water Colours. Part I. London, 1831. Tilt; Colnaghi and Son; J. and A. Arch.

THE subjects of this, the first Part of a most laudable design, are, Venice, engraved by E. Goodall, after Prout; the Gamekeeper, by E. Smith, after W. Hunt; and Rembrandt in his Study, by C. Lewis, after Stephanoff. There is thus a sufficient variety, both in paintings and in the style of engraving, to render this Part a fair and promising specimen of the work. Prout's Venice is as perfect as ever Canaletti produced, and is exquisitely engraved; while the Rembrandt exhibits all the properties of Rembrandt's own most finished etchings, and is full of spirit and effect. The Gamekeeper is in a free open manner, and affords a perfect idea of Mr. Hunt's colouring. The letter-press, descriptive of each subject, is brief and suitable; and altogether we hail with much satisfaction the auspicious commencement of an undertaking so well calculated to perpetuate the genius of our water-colour school, even long after the originals may have perished.

Landscape Illustrations of the Waverley Novels. Part XX. London, 1831. Tilt; Moon, Boys, and Graves.

A Room at Abbotsford, drawn by D. Roberts; Peronne, drawn by W. Brockedon; Heriot's Hospital; Niddry Castle; are the interesting ornaments of this fasciculus, which is quite equal to any of the preceding Parts. The name of E. Finden is a guarantee for the beauty of the engravings.

Lady Marjoribanks. Engraved by Thomson, from a Miniature by Mrs. James Robertson, for the forthcoming No. of *La Belle Assemblée*. M. Colnaghi.

THE eighty-fifth portrait of a truly *belle assemblée*, which adorn this fashionable and agreeable Magazine, Lady Marjoribanks is a comely individual in the goodly company. The engraving is excellent.

Caricatures.—We noticed, a few weeks since, a very good-humoured and laughable caricature of Prince Talleyrand; and we now see, appa-

rently from the same quarter, two other personages of note about town figuring in Mrs. Humphrey's window. These are Lord Westmorland and Lord Castlereagh, on horseback, as Old and Young Rapid. The horses, especially Lord Westmorland's, are admirably drawn; and the likenesses of the noble lords themselves are ludicrously characteristic.

SKETCHES OF SOCIETY.

IMPROVEMENTS IN LONDON:—SOUTH LONDON MARKET.

NOTWITHSTANDING the wealth and intelligence of which we boast so much, and which we certainly possess in the metropolis, it is rather extraordinary to observe how much we are wedded to old habits, and how slow we consequently are to adopt improvements. But progress has been made and is making in many parts. This vast city, by the establishment of the new market at Hungerford Street, will at length possess two fish-markets on the river; and the west end of the town may be supplied without the enormous expense, or inconvenience, which has hitherto attended its purchase of this essential article. The widening of the Strand is another great improvement; and the opening of streets thence to the north and west, will greatly facilitate the intercourse through populous districts. Baths are creeping into use,—though it is yet much to be desired that really good and more moderately priced establishments of this kind should be formed. The removal of Fleet Market is a manifest advantage to the city; and it is to be hoped that Smithfield, with all its Monday drivings of infuriated cattle, and also the disgraceful and disgusting slaughterings in Newgate Market, with many other similar nuisances, will speedily be abated. Our attention has been called to these considerations by a plan, which has been sent to us, for the enlargement of St. George's Market, between the Obelisk and Elephant and Castle, so as to make it adequate to the supply of the south of London with meat, fish, vegetables, and fruit. It is proposed to be called the South London Market, and to contain, at the cost of 80,000*l.*, extensive abattoirs and cattle-pounds. The situation is apparently excellent; and the architectural elevations of the buildings, &c. are agreeable to the eye. Southwark and the adjacent parishes are stated in the prospectus to have more than quadrupled their inhabitants within the last twenty years, so as now to exceed 400,000 souls; whilst there are only two markets on the south side of the Thames, viz. the Borough Market for vegetables, and St. George's for meat and slaughtering of cattle. Should the amount wanted be raised, in shares, and the project be sanctioned by parliament, we have no doubt but that great public benefit would result from its completion.

A SONG FOR SENEX.

[We sometimes insert articles on account of their goodness, sometimes on account of their badness. By the by, we do not think it worth while to print the farther grave answer to Senex, which accompanied the annexed.—Ed. L. G.]

The following was written a few years since, on the exhibition of a Mermaid at the west end of the town, and, from some dispute between the proprietors, was brought before the Chancery Court. The author has availed himself of the license granted to poets, and wrote his song as if the mermaid were alive.

I sing of a maiden of ancient renown,
Not long since much talked of in country and town,
Who in Neptune's old kingdom has felt many gales,
And, before she'd seen England, had often seen whales.

Without a side-saddle she rode a sea-horse,
But having no legs she could not sit across,
Which seems rather odd, and somewhat romantic—
She could not cross a horse, but could cross the Atlantic.

They say she's an heiress—some great Triton's daughter,
Without one foot of land, but most wealthy in water,
And though always to matrimony warmly inclined,
She ne'er met a merman yet quite to her mind.

Thus this maid has no *suitor* to suit her, 'tis said,
But was ne'er heard to murmur, although a mermaid;
She weighs well their merits, and finds that each falls,
For 'tis very well known she has plenty of scales.

This maid for dram-drinking ne'er yet had a wish,
Though report always said she could drink like a fish;
Neither beer, wine, nor spirits with her would agree,
Though with *spirits* she oft has lain in the Red Sea.

To the Chancery bar now at last they have brought her,
Where she looks, as folks say, like a fish out of water;
And though at the lawyers 'tis known she can't rail,
She turns her nose up at one, at another her tail.

The counsel they smelt her, and look'd very wise,
Then they all shook their wigs, and they half shut their eyes.

The Chancellor said, it could not be denied,
That she looked very much like flesh fishified.

Tom's Coffee House,
Dec. 19, 1831.

DRAMA.

DRURY LANE.

MRS. GORE's new comedy, called *Lords and Commons*, was performed for the first time on Tuesday; and although it was not received in a manner likely to turn out profitable either to manager or author, yet many of the scenes were so well written, and there was altogether so fair a display of talent in the piece, that we think if Mrs. Gore will devote herself to the stage, she may yet produce a play worthy of some of the better periods of the English drama. The chief defect of the comedy is a want of novelty; for although we are informed in the prologue that the piece is original, our memory very much deceives us if the same subject has not already been twice before the public; in the first instance, in Hook's clever tale in *Sayings and Doings*, of *The Man with many Friends*, and afterwards the same story adapted and thrown into a five-act comedy by Morton, which was acted for a series of more than twenty nights. The only parts, therefore, of the play which belong exclusively to Mrs. Gore, are three or four of the subordinate characters, and the dialogue which is put into their mouths. The former are tolerably well sketched, though a little too much in caricature; and the latter we have no scruple in saying is extremely well written—nervous and elegant in the serious portions, and terse and very neatly pointed in the comic scenes. The plot being so well known we do not consider it necessary to enter into a detail of it, and we shall therefore confine ourselves to the actors, to whom in general the fair writer must feel herself greatly indebted. Farren, the first in talent as in rank, performs the same character he assumed in Morton's play at Covent Garden, viz. that of the old Nabob, who returns from India rich and bilious, and desirous to hear a good account of his spendthrift nephew. Of his qualifications for such a part, our readers cannot entertain a doubt; and the arbitrary manners and cutting sarcasms of old Sir Caleb lost nothing in his able hands. His dress also was good, though we see no reason why it should have been so slavishly copied from an individual who walks about our streets, and who, notwithstanding the singularity of his appearance, is, we believe, a highly respectable and very inoffensive person. Wallack played the idle nephew, and played it well, particularly the latter part of his performance, —a sort of *Harry Dornton* scene, which was marked with a very proper degree of energy and spirit. His dress was not so good; a green silk waistcoat, a pink under ditto, and black-

velvet smalls with cut-steel buttons, are not, we believe, usually seen in high life, either collectively or individually. The dress of his brother, H. Wallack, was infinitely worse: Russian boots with false tops (and if we misrepresent his boots we are ready to apologise), with spurs pretty nearly on a line with his side-bone, to say nothing of the collar to his coat—are never seen even upon such men as *Lord Martingale*, “damaged odds and ends,” though they may be of the peerage; “cracked accounts,” or “lords without a leg to stand upon.” Another actor, Mr. Jones, had dressed his face after that of a noble lord well known about town; and Harley, lively as he always is, would not appear to least advantage if a slight alteration were made even in his costume. Of the ladies we can speak with unabated pleasure: we only regret that we saw so little of them: Mrs. Faucit, Mrs. Orger, and Miss Kenneth have not more than a few lines each. Miss Phillips's part, though the best, is not a very prominent one; but we are glad that she undertook it, because she is evidently improving herself fast in comedy. Her early scenes were extremely lively. She looked charmingly in both her dresses; and in the last act, where she pleads her father's cause, and refuses a husband whom she dislikes, she received deservedly very great applause. Mrs. Humby played the usual saucy waiting-maid, and spoke a fair epilogue with much ability. We think, however, that the ill-natured hits about robberies from the French stage might have been dispensed with; as if such things be crimes, we do not see much difference between the enormity of taking the plot of a French drama and that of an English novel. Mr. Brindal, we had almost omitted to state, played a valet of the *exquisite* school, and got on as well as he did last summer at the Haymarket in the listless lord of the *School for Coquettes*.

COVENT GARDEN.

BRAHAM and Miss Shirreff continue to draw good houses to the *Beggar's Opera*; but we are afraid that unless the young lady looks a little more to nature and a little less to art, she will find herself losing ground in the public estimation. The airs of *Polly* are not *bravuras*. This hint, we hope, will be sufficient: it would be a pity to see so much talent perverted or undervalued. Braham's *Macheath* is admirable: but there is a little bit of comic acting in this opera which surpasses any thing we have seen for a long time, and that is Mrs. Keeley's *Lucy*—it is quite genuine.

THE ADELPHI.

On Monday night a new farce, under the name of *Damon and Pythias*, was produced at this pleasant little theatre. It is a neat and spirited piece, full of bustle and fun, and with enough of jokes and hits to cause it to be received with hearty laughter, and almost make us wish it a little longer, even though it was followed by the delightful *Victorine*.

UNREHEARSED STAGE EFFECTS.

[From a Correspondent, who promises that they will not interfere with our regular criticisms, and whom we thank for his offer to continue them.—Ed.]

Drury Lane.—Dec. 5. The tiger in *Hyder Ali*, instead of running in a straight line across the stage, stooped about half-way, and turning at a right angle came scampering towards the pit. The pit-folk began cowering and crouching in all directions, as if that would have saved them; when Mons. Martin rushed on, and

fer a little French gesticulation, punctuated on the beast and pommelled it off the stage.*

Dec. 6. The first night of the *Barber of Seville*, when Seguin, in the last scene, seized the notary, he, in his vehemence, not only upset the actor but knocked his legal wig off. The laughing of the audience so confused the poor fellow, that he in his hurry stuck his wig on with the tail in front hanging over his nose; of course eliciting redoubled roars. To my great astonishment, on Thursday 8th, when it was performed for the second time, this manoeuvre, so palpably an accident on the first night, was, in consideration of the brilliant effect it had produced, purposely, though not so naturally, repeated, and has doubtless been continued on each successive performance!

Adelphi.—Dec. 12. The hissing at *Favourites in Town* began in the first scene, during the phantasmagoria dream of Yates, who on waking introduced this ready morceau of "gag," in describing his dream to Wilkinson. "All was going on well, when all on a sudden there arose a strange hissing noise, which something told me came all from one quarter, (looking up at the suspected parties,) and urged me not to heed, as being too harsh and too early in the evening for a fair sentence. Well, well—we shall see how matters go on." (All this was said in the imitative manner of Tate Wilkinson, which he adopts in this piece.) The readiness of the Adelphi actors at this gagging accomplishment was manifested the same evening, more or less, throughout *Victorine*, (in which they appear to grow more imperfect by frequent repetitions,) but particularly in the last act, when the dinner-tray, with soup, &c., having accidentally fallen and got smashed, a considerable number of the usual practical jokes were necessarily omitted; but the awkward situation of the actors, thus excluded from practising their wanted manoeuvres, was made the best of, by O. Smith growling out, "Sacré! what a disappointment!" Yates picking up a dish and licking it; and Reeve coolly saying, "Well, I'll wait, and take my dessert before dinner to-day—a pinch of snuff." He then, having duly administered the pinch, made an observation on the time, which led at once to the continuance of the scene in the usual course.

Olympic.—Dec. 14. The first night of the *Dumb Belle*, Vestris having spoken the tag, and applied her ear-trumpet with great *éclat*, made a few steps back, in the usual manner, with the other performers, to leave room for the curtain, which at this theatre, instead of falling, appears in two parts from either side of the stage, and joins in the middle, (*vice versa* instead of rising). Unfortunately only half of it appeared. Vestris and J. Vining were obscured, but three others remained unhidden: two of these soon made their exits in confusion, but the third seemed determined to stand till the other half of the curtain should duly appear. At length Vining reappeared, scampering across the still-bare side, and abusing the attendant in fault so very audibly that the audience burst into a laugh; whereon Vestris also reappeared, pursuing him, and exclaimed, (she having just been married to him in the farce,) "Now, my dear Frederick, really—toshew temper so soon!" &c. The regular act-drop was then lowered, and the audience tranquillised.

* I am told the llama ran into the stage-box the other night; also that a monkey lately ran across the stage during a pathetic scene of a tragedy; on which occasion Wallack was hissed for his immoderate laughing at it;—but I note down only what I see myself.

VARIETIES.

Miss Caroline Lyon.—There is a theatre called Mr. Pym's Theatre, and situated in Wilson Street, Gray's Inn Road, where Miss Caroline Lyon appeared on Tuesday as *Maria Darlington* and *Clari*. We were unable to attend, but we hear a good report of the fair *débütante* from a competent judge, who describes her as a sweet singer, an affecting actress, and a very pretty girl.

S. Middiman.—We observe the death of Mr. Middiman in the newspapers of this week. He was full of years, being above 80, and, we presume, the father of our school of engraving, to which he was for so long a period a distinguished honour. Mr. Middiman's works in landscape hold a foremost place in all valuable collections; and in private life he was as estimable as he was celebrated in the arts.

Cambridge.—At the second meeting of the Cambridge Philosophical Society—Prof. Sedgwick in the chair—the Rev. L. Jenyns read a monograph of the British species of bivalve mollusca belonging to the genera *Cyclas* and *Pisidium*. A paper was also presented by S. Earnshaw, Esq. on the integration of the general linear differential equations of any order, and on the general equation of differences with constant co-efficients. After the meeting, Mr. Whewell gave an account of the different theories of evaporation which have been proposed; namely, the theory of hollow spherules, that of the chemical solution of water in air, and the theory of the independent equilibrium of vapour in air. The reasonings and experiments were noticed by which M. Dalton has illustrated and confirmed the last-mentioned view of the subject. The mode of determining the dew-point at any time was pointed out, and the construction and use of Daniell's hygrometer. Finally, the bearing of these views upon the production of clouds was spoken of, and some circumstances relative to the formation of *cumuli* described and explained.

University at Durham.—A Durham college has been commenced, and is to open in October next, under the auspices of the Bishop and Chapter. There is a foundation for students; and also provision for the reception of ordinary and occasional students. Four years will complete the education of a member, and there will be prizes and examinations. This institution promises to be highly beneficial, and particularly to the northern parts of England.

In the *Olio*, a periodical we have often mentioned with praise, we have lately been much pleased with an Interior of Milan Cathedral, from a drawing by J. D. Harding, and a group of female figures, to illustrate a tale. The former is a striking production of art in a work for threepence, and itself worth many threepences.

Correct Statement of the first Discovery of the Murder of the Italian Boy.—It may perhaps interest the public, to learn exactly what steps led to the arrest of the murderers of the supposed Italian boy. Hill, the porter of King's College, upon receiving the body from Bishop and Williams, observed its freshness, and, in the regular course of his duty, went to the demonstrator of anatomy, Mr. Partridge, to inspect the body, and to receive his orders respecting it. Mr. Partridge conceived that the appearances presented by the body indicated a recent death by violence, and sent to Mr. Thomas for some police officers to be at hand, in case, upon deliberation, it should appear right to give the men into custody. Mr. Mayo, the professor of anatomy, then arrived, and viewed the body with Mr. Partridge, and it

was decided that the resurrection-men should be immediately arrested. The grounds of suspicion were the following:—the body was fresh, and seemed not to have been buried; nevertheless, it was possible that it might have been obtained after death from an hospital; but, on the other hand, there was no mark of common violence, as if the boy had been killed by any ordinary accident;—there was not that emaciation which attends death by *slow* disease;—and there were no marks of the remedies, such as bleeding, blistering, cupping, or leeches, which are commonly resorted to in *acute* disease. Mr. Mayo having sent orders that the police should come round, went to the men to give them into custody. Mayo was quite drunk upon the floor; Bishop and Williams had been drinking, and looked maudlin and stupid, and under the influence of liquor. When the policemen appeared, the prisoners, with the exception of Mayo, made not a single remark, and expressed no surprise, and offered no resistance. The evidence against the murderers was collected by the indefatigable activity of Mr. Thomas.

The Italian Opera.—If spirit and enterprise deserve success, we think Mr. Monck Mason must, by his exertions, absolutely command it. Till arrangements are completed, we need not go into particulars; but we have made it our business to see what was going on, and we can say, that a theatre wonderfully improved in appearance—an operative force of great extent, and comprehending many new singers of the highest eminence as well as known favourites—an orchestra of extraordinary power—several couples of the first dancers in Europe, instead of a *solitary*, as heretofore—and novelties in the pieces to be performed, await the sanction of a public at once discriminating and liberal.

Gold in the Electorate of Hesse.—An event of great importance to the electorate of Hesse and the adjacent territories of Waldeck and Darmstadt, is the discovery that the river Eber is rich in gold,—a circumstance which has hitherto been overlooked. Colonel von Eschwege, who was chief director of the mines in Brazil, affirms that, according to his own examination, this river is as rich in gold as the richest in Brazil. It is in contemplation to carry on the washing for gold in this river on a great scale, by means of a large joint-stock company, and under the superintendence of M. von Eschwege. It is expected that this undertaking will not only be profitable to the shareholders, but highly advantageous to the state, by affording employment to a great part of the poor country people in the neighbourhood. It will be quite a novelty, if in Germany, hitherto considered as poor in gold, treasures like those of Brazil and Mexico should all at once be brought to light, as in the Ural chain.

Parisian Water.—By the orders of the prefect of the Seine, public water-conduits are about to be laid down in various parts of Paris; and individuals are invited to avail themselves of the circumstance to obtain private pipes to their respective houses.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. Lf. Dec. 24.]

By M. de Porquet, *Thesaurus Lingue Latine*, or turning English into Latin at Sight; also similar works in Greek, German, Spanish, and Portuguese; *La Vie de Napoléon*, for the use of Schools; and a French and English School Dictionary, from which all Vulgarisms and Improper Expressions are expunged.

A new edition of Brown's *Self-Interpreting Bible*; with additional Marginal Notes, &c.

The *Double Trial*, or the Consequences of an Irish Clearance; a Tale of the Present Day, by the Rev. C. Lucas.

STANDARD NOVELS AND ROMANCES.

Published Monthly in Volumes, out of which generally includes an entire Novel, neatly bound for the Library, and illustrated by Engravings from Designs by eminent Artists. Price 6s. each Volume.

This popular Work has now reached its Tenth Number, and has every where obtained approval and encouragement.

No kind of literature is so generally attractive as fiction. Pictures of life and manners, and stories of adventure, are more eagerly received by the many than graver productions, however important these latter may be to the instruction of mankind.

A point is better remembered by his fable of *Capit and Psyche*, than by his abstracter fictions of writing; and the Decameron of Boccaccio has outlived the Latin treatise and other learned works of that author.

But well-wrought fiction is characterized not alone by amusement: it is made subservient to the purposes of instruction, in acquainting us with the beauties and miseries of human existence—in familiarizing us with many-colored life among ourselves and in distant lands—in telling us what it is best to imitate—in warning us what we ought to shun; and in demonstrating, by its almost living examples, the fatal consequences of rashness and vice.

To the young, in particular, the lessons afforded by good fictions are inestimable: and the young will eagerly receive advice thus proffered. It is therefore more necessary in novel-writing than in any other branch of literature, that the utmost care should be bestowed in the selection of incidents destined to be indelibly impressed on the youthful mind; the danger of doing wrong being in proportion to the power of the writer, and the popularity of the agency. No one, however, can deny that until within the last thirty or forty years, the great masters of fiction have been, if not immoral in their aim, exceedingly impure in their details; so much so, indeed, as to render it impossible that a considerate parent should present their works to his children.

The Standard Novels are not liable to this charge. The Proprietors may confidently assert, that a body of popular fictions are now, for the first time, printed in one series, which are not only equal in talent to those in other collections, but, being written in accordance with morality and decorum, promote just and interesting pictures of life in all its aspects, without involving the slightest danger of contaminating the minds of their readers.

The Stories already published in the Standard Novels consist of the *Pilot*, the *Spy*, and the *Last of the Mohicans*, by Cooper, the admirable historical novel of *America*, by Caleb Williams and St. Leon, by the English sage, *Giles*; *Miss Jane Porter's Thaddeus of Warsaw* and *Scottish Ghost*; *Mrs. Shelley's Romance of Frankenstein*; *Schiller's Chast-Ser*; and *Brookden Brown's Edgar Huntly, or the Sleep-Walker*. Any of these might safely, and to great profit, be perused by the young, for whom they are well adapted as cheap and acceptable Christmas Presents and New Year's Gifts.

The authors of the volumes already published have been induced to revise their works, and to write Notes and new Introductions, expressive of their views on the subjects, and to immediately forthcoming in the Standard Novels, the Proprietors will particularly mention the *Canterbury Tales*, by *Sophia and Harriet Lee*, a new translation of *Madame de Staël's Corinne*; *Miss Hamilton's Cottagers of Glenburnie*; more of the *National Tales of Cooper*, &c. &c.

No. XI. containing the *Hungarian Brothers*, by *Miss A. M. Porter*, will be published on the 1st of January.

New Burlington Street.

Mrs. Trimmer's Works.

In 6 vols. 12mo. price 11. 7s. boards, or 11. 10s. bound, the 8th edition of

PRICE 8d.

THE LITERARY GAZETTE.

THERE are many customs more honoured in the breach than in the observance; yet, in one where a grateful feeling must be experienced, we would rather bear the imputation of an oft-told tale than incur the suspicion of coldness or neglect. With its many, very many friends, the *Literary Gazette*, as a public journal, hopes to continue its intercourse in the same manner as heretofore,—receiving from them the same testimonies of esteem, and requiting them by the same assiduity in supplying the information sought by the intelligent of all classes, and the same undeviating simplicity and honesty in placing every subject before the understanding of its readers. We know that none can peruse these sheets, collected from so many valuable sources, without much improvement; and we are free to declare of ourselves, that, making common allowances for errors in judgment or difference of opinion, a syllable never appeared in our page to mislead the sense or distort the truth.

After fifteen years of success, such as never attended any periodical of a similar nature, we might spare ourselves any professions on these heads; but the noise of impudence and quackery is so loud in the press, that a calm elevation of voice, only once a year, may be excused in those who are never egotistic or combative at any other time.

In periods of excitement, especially, the press, always powerful, assumes an almost despotic influence—sorry are we to observe that it often abuses it. In this country at this moment it is so grossly abused, that even men who hold the just tenet, that its freedom ought to be as unrestricted as the freedom of speech or thought, are too frequently compelled to question whether its existence be a benefit to society or a curse. And it twines itself into so many folds—proceeds upon so many hidden motives—proclaims its false pretences so boldly, that it is indeed difficult to distinguish through its medium the right from the wrong, the true from the false. As one of its members, we cannot help feeling a portion of the common obloquy, though anxiously endeavouring, throughout our whole career, not to deserve it. For none can more regret than we do, to see the noblest engine which man can employ so exceedingly debased—to see that which ought to spread knowledge and virtue and benevolence over the world, made the organ of slander and depravity and malignity. Were the individual oracles whence these pernicious principles are diffused, held up to the scorn and infamy they richly merit; were they but dragged from their darkness and rendered visible in their own naked insignificance and worthlessness; we can fancy how astonished the public would be at its folly in having listened to such guides. Persons for whom the English tongue has but one impressive term, blackguards; boys pert from school, men never met in society, and without the responsibility of reputation, ignorant and envious libellers, the justly disappointed, the scurrilous, and the self-interested, take too prominent a part in our periodical literature, and to those who are in the secret of their existence furnish an abundant wonder that they should produce the slightest effect upon the mind of the country. Their entire system would provoke a severe denunciation, were it not contemptible as well as injurious: look, for example, to the majority of the literary periodicals of the day. In some, politics alone direct the judgment; in others, the tone is never to encourage, ever to depreciate. The poor reptile, big in fancied importance, grips the fruit of genius and toll for his prey, and by bealining it with

his own impurities makes it offensive to the taste, and destroys that which might fairly have grown into beauty and excellence. The buzz of the insect tribe, the sting of the malicious, and the venom which displays itself, while its perpetrators shrink from chastisement under their anonymous occupation in slanderous personalities, are truly to be lamented in our national literature, and particularly from their prevalence in publications of a description to influence opinion in every class of the community.

But we feel that, instead of saying a few words for ourselves, as is usual in these addresses, we have been betrayed into a mingled censure and apology for the press generally. We confess that our wish is strong for an improvement, not only in ourselves, but in our contemporaries; more exertion and less egotism would well become the best,—an utter avoidance of the personal and slanderous, would rescue all from the dislike (to use a tender word) in which we are too much involved, through the abuses to which we refer. If even the meanest writers would consider how very small a talent is requisite for the indulgence of pique, and the safe-saying of things offensive to the unoffending, whose worst crime has been an endeavour to produce what was worthy of applause—we do think that kindlier, more generous, and more manly criticism would distinguish our periodical literature, and that the cultivation and encouragement of our national school, rather than its reproach and depression, would be the result.

Instead of being filled with our own vanities; instead of pestered the public with our own squabbles; would it not be infinitely more graceful and useful to redouble our diligence, in order to meet the demands of more enlightened times and a widely enlarged circle of readers, deeply desirous to reap instruction and refinement from our labours. We are persuaded that it is so; and for ourselves, we shall promise zeal without abatement, and a continuance of that impartiality and independence which has exposed the *Literary Gazette* to attacks from all sides,—attacks we have not deemed it necessary to answer, except by our conduct and the character of our publication. Be it ours still to cherish the literature of England, and make known its merits to every quarter of the globe;—never be it ours to hurt one good feeling by the miserable ambition of being smart and clever. Above all, amid the most unwearied and anxious efforts to collect early and correct intelligence on every subject embraced by our plan; let us remember, that the private and social intercourse of life is sacred, and that he who can forget the gentleman, can never be a fit instructor of the public.

REVIEW OF NEW BOOKS.

The Works of Lord Byron; with his Letters, and Journals of his Life. By Thomas Moore, Esq. Vol. I. London, 1831. Murray.

THIS beautiful and highly-finished volume commences the series of what may well be called a national work. The greatest of his time, and inferior perhaps to only one of his predecessors, Lord Byron is now among the classics of our language; no library will be held complete without his works, no history of poetry perfect which does not include his own. Opinion may vary, as opinion ever has varied—for how can there be a general standard for what is grounded on individual taste?—but his place is taken; and, substituting a higher word even than love, we may use his own lines, and say—

“The fame where death has set its seal,
Nor age can chill, nor rival steal,
Nor falsehood disavow.”

The old proverb *de mortuis nil nisi bonum*, is grounded on one of the most beautiful feelings in humanity, that of kindly allowance, sanctified by that nameless awe which dwells with the dead. We never yet made an allowance for another which did not benefit ourselves. It is no spirit of high morality which delights in drawing forth and dwelling upon failings; to talk of example in such cases is too often cant; in nine cases out of ten the error serves rather as an excuse than as a warning. There are two feelings with which it seems to us Byron's memory should be regarded; first, a conviction of the weakness of our nature, when we see that its most glorious gifts can be alloyed by some of its lowest failings; and, secondly, by an unmixed and earnest gratitude for the world of thought, emotion, and beauty, he has left as his legacy of the human heart.

This edition judiciously begins with his life, for which few men ever left more abundant materials: few men ever wore their “hearts on their sleeve for daws to peck at” more openly than Lord Byron. He was of a singularly confidential turn; there was in his nature a perpetual necessity for what the French so well express by the word *épanchement*, and for which our language has no exactly-answering translation; it overflowed both in his conversation and correspondence. There is a very acute remark in the novel we have this week reviewed, that there is usually something feminine in the character of one who is an excellent letter-writer. There was much that was feminine in Lord Byron; his personal vanity, his mobility of impression, his sensitiveness, his turn to confidence—all these are the traits generally supposed to be characteristic of woman: add to these a penetration as keen as it was deep, sagacity unerring, a profound knowledge of human nature, an immense mass of reading, a memory always ready, most dramatic manner of narration, a vast fund of anecdote; all these various qualities and acquisitions poured forth with inexhaustible fertility, make his letters, even taken as mere notes of the time, by themselves one of the most delightful collections in the English language. The great and common objections to Byron's letters, as well as to his poems, are their two most marked features, vanity and egotism. Both these points seem to us susceptible not only of excuse, but of vindication. Vanity is an inseparable component in the poetical temperament. We all know how every one naturally overvalues the particular object of their existence; now, opinion must be not only a poet's object, but his very being; unless he wins its difficult suffrage, all his efforts end in worse than nothing. We expect him to toil, to be anxious, to put forth his best powers, to give us his time and his mind, all he hath he gives, for our applause—and when he has won it, we are in a rage that he is proud of it! Of all vanities, literary vanity is that which should meet with the readiest forgiveness; for it

is grounded on having given pleasure, and, after all, is a personal compliment to its judges. As to egotism, it is unjust to heap on the head of one the odium of a universal failing. Take an instance out of many: with what will your neighbour at the dinner-table entertain you? why, with discourse about himself and his dependencies; he will tell you how the weather affects him, descant upon the virtues of his favourite lozenges; he will tell you how many children he has, and be eloquent upon their merits; perhaps once in his life he may have been robbed, and he will detail it (*i. e.* the robbery), if a matter-of-fact man, not one atom varied from the narrative with which, some ten years before, he astonished his family circle: if, on the contrary, imagination enter into his composition, he will vary the details, and perhaps throw a little additional horror and courage into the story. Now, in nine cases out of ten, you will never think of grumbling, but repay the colloquial obligation in kind; and each will depart satisfied that both he and his neighbour are very respectable and amusing individuals. What was called Lord Byron's egotism, was the voice of the many, not of the one; he was, in reality, the interpreter of a multitude. So long as there are feelings at war with circumstances, so long as the mind has aspirations higher than its efforts, so long as hope darkens into disappointment, so long as pleasures sink into satiety, so long as fear, remorse, and a yearning for the future, are indwellers of the human soul, so long will Byron's poetry retain its hold on the feelings, and be strong in its earthly immortality. The painful interest excited by the earlier portion of his history, now before us, is very great. We see him in the onset of his career, affectionate, generous, with all the enthusiasm and consciousness of great powers inseparable from genius; and yet surrounded by difficulties and mortifications. His solitary entrance into the House of Lords was enough to have turned into bitterness a world of kindly emotions. Again: we who are accustomed to consider his fame an acknowledged and established glory, take little into consideration the denial, depreciation, and attack, that made the fiery ordeal through which, in his lifetime, it had to pass. There was not a single distinction in all his life which he did not force: he fairly fought his way to fashion and to fame. At the time of his leaving England, his success was paying that infallible penalty which envy, hatred, and evil tongues, will inevitably exact: to this he had laid himself peculiarly open; and, as has been so well said, "it is through our weaknesses that our vices punish us," a thousand absurd reports were in circulation, and every one visited on his head as a truth. There must, no doubt, be great consolation in conscious innocence, though it seems singularly hard to be punished for what we have not done; while few but secretly admit the justice of the infliction when the crime brings its consequences. We have always considered Lord Byron's leaving England as the most unfortunate and ill-judged act of his life. The debased and profligate Italians, in their contaminating intercourse, would relax the morality, and debase the higher feeling of moral excellence in an Englishman. Had Byron's marriage been more fortunate, and secured his residence in his own country, there can be little doubt that he would have been a happier and better man. He would have felt his responsibility; and, the impetuous irregularities of youth evaporated, his reckless disregard of public opinion might have settled down into a

conviction of its necessity, and a respect for its award. But it is useless speculating about the past. Of Lord Byron we conclude by saying, —let no one turn his errors to excuse or exaggeration; the faults of another do not palliate our own. And while acknowledging his noble qualities, and averting our eyes from his weaknesses, let us be content to dwell with thankfulness and delight on pages whose passion, beauty, and power, are indissolubly linked with his "land's language." For the present edition taste and liberality have done their utmost: the printing, the paper, the embellishments, are perfect; the size of the volume, neat and portable, would alone be a recommendation to many. The illustrations of the one before us, are a fine portrait of Byron in his sailor's dress, when about the age of nineteen; and opposite to this is an exquisite vignette, containing a view of Cadiz. The expense of this work must have been enormous; but it ought, and we doubt not will meet with the encouragement from the public it so amply merits. We have heard that one of Byron's latest efforts was a translation, in *ottava rima*, from Madame de Stael's *Corinne*, and that this poem is in Mr. Hunt's possession, who asks 300*l.* for the MS. We do not, however, vouch for the truth of this *on dit*, neither can we say on what grounds Mr. Hunt claims it as his property.

The Summer Fête, a Poem; with Songs. By T. Moore, Esq. 4to. pp. 108. London, Power.

It is pleasant to enliven these winter holiday times by the remembrance of a summer fête; but a poetical *jeu d'esprit* must be always welcome. Light, playful, and various, this volume is just made for the social circle—whether limited to the sacred few of the boudoir or the more numerous favourites of the drawing-room. Its origin is dated from the famed entertainment at Boyle Farm; and the bard sets out by celebrating the fine weather which so miraculously crowned that fashionable fresco party.

"For brighter sun than that which now
Sparkled o'er London's spires and towers,
Had never bent from heaven his brow
To kiss Firenze's City of Flowers.

What must it be—if thus so fair
Mid the smoked groves of Grosvenor Square—
What must it be where Thames is seen
Gilding between his banks of green,
While rival villas, on each side,
Peep from their bowers to woo his tide,
And, like a Turk between two rows
Of harem beauties, on he goes,
A lover, loved for e'en the grace
With which he slides from their embrace."

Wooded by invitation and the accommodating season—

"In one of those enchanted domes—
One, the most flowery, cool, and bright,
By which that lingering river roams—
The fête is to be held to-night—
That fête already linked to fame,
Whose cards, in many a fair one's sight,
When, looked for long, at last they came,
Seemed circled with a fairy light—
That fête to which the cult, the flower
Of England's beauty, rank, and power—
From the young spinster, just come out,
To the old premier, too long in—
From legs of far-descended gout,
To the last new mustachioed chin—
All were convoked by Fashion's spells
To the small circle where she dwells,
Collecting nightly, to allure us,
Gay atoms, which, together hurled,
She, like another Epicurus,
Sets dancing thus, and calls 'the world.'"

E'en parliament this evening nods
Beneath th' harangues of minor gods,
On half its usual opiate's share;
The great dispensers of repose,
The first-rate furnisners of prose
Being all called to—prose elsewhere.

Soon as through Grosvenor's lordly square—
That last inpregnable redoubt—
Where, guarded with Patrician care,
Good, ancient Error still holds out—
Where never gleam of gas must dare
Against old Darkness to revolt,
Nor smooth Macadam hope to spare
The dowagers one single jolt—
Where, far too stately and sublime
To profit by the lights of time,
Let intellect march how it will,
They stick to oil and watchmen still."

But neither must we remain in town—
for the farm and fête—

"With gay Sultanas,
Rebecca, Sappho, Roxalana—
Circassian slaves, whom Love would pay
Half his maternal realms to ransom—
Young nuns, whose chief religion lay
In looking most profoundly handsome—
Muses in music—pastoral maids
With hats from the Arcadian shades,
And fortune-tellers—rich, 'twas plain,
As fortune-tellers formed their train.
With these, and more such female groups,
Were mixed no less antistatic troops
Of male exhibitors—all willing
To look even more than usual killing—
Beau tyrants, smock-faced braggadoos,
And brigands, charmingly ferocious—
Grave friars (staunch No Popery men),
In close confab with Whig Caciques;
And M.P. Turks, all Moslem then,
Who last night voted for the Greeks."

In such company there is a good deal about the champagne, which was, no doubt, very agreeable and inspiring tittle. To such cheer songs could be no bad addition—and, lo! they are heard. The following *chanson à boire* is very like an imitation of Moore by Moore.

"Some mortals there may be, so wise or so fine
As in evenings like this no enjoyment to see;
But, as I'm not particular—wit, love, and wine,
Are for one night's amusement sufficient for me.
Nay, humble and strange as my tastes may appear,
If driven to the worst, I could manage, thank heaven,
To put up with eyes such as beam round me here,
And with wine such as this is, six days out of seven.
So pledge me a bumper—your sages profound
May be blest, if they will, on their own patent plan;
But as we are not sages, why, send the cup round—
We must only be happy the best way we can.

A reward by some king was once offered we're told,
To whoever could invent a new bias for mankind;
But talk of new pleasures—give me but the old,
And I'll leave your inventors all new ones they find.
Or, should I, in quest of fresh realms of bliss,
Set sail in the pinnace of Fancy some day,
Let the rich rosy sea I embark on be this,
And such eyes as we're here be the stars of my way!
In the meantime, a bumper—your Angels, on high,
May have pleasures unknown to life's limited space;
But, as we are not angels, why, let the flask fly—
We must only be happy old ways that we can."

The approach of twilight is very sweetly described:—

"Now, nearly fled was sunset's light,
Leaving but so much of its beam
As gave to objects, late so bright,
The colouring of a shadowy dream;
And there was still where Day had set
A flush that spoke him loath to die—
A last link of his glory yet,
Binding together earth and sky.
Oh! why is it that twilight best
Becomes e'en brows the loveliest?
That dimness, with its softening touch,
Can bring out grace unfelt before,
And charms we ne'er can see too much,
When seen but half enchant the more.
Why is it, but, that every joy
In fulness finds its worst alloy;
And half a bliss but hoped or guessed
Is sweeter than the whole possessed—
That Beauty dimly alone upon,
A creature all ideal grows;
And there's no light from moon or sun
Like that imagination throws—
Why is it but that Fancy shrinks
Even from a bright reality,
And turning inly, feels and thinks
Far heavenlier things than e'er will be."

And now we shall have another, an appropriate, song:—

"Smoothly flowing through verdant vales,
Gentle river, thy current runs,

• Beautiful nights are painted with equal poetry, as
• Nights, such as Eden's calm recall
In its first lonely hour—when all
So silent is, below, on high,
That if a star falls down the sky,
You almost think you hear it fall!"

Sheltered safe from winter gales,
Shaded cool from summer suns.
Thus our youth's sweet moments glide,
Fenced with flowery shelter round;
No rude tempest wakes the tide,
All its path is fairy ground.

But, fair river, the day will come,
When, woe'd by whispering groves in vain,
Thou'lt leave those banks, thy shaded home,
To mingle with the stormy main.
And thou, sweet youth, too soon wilt pass
Into the world's unsheltered sea,
Where, once thy wave hath mixed, alas!
All hope of peace is lost for thee."

There is a sportive account of a fair, whose head-gear attracted the poet's fancy, being

"That build of bonnet, whose extent
Should, like a doctrine of dissent,
Puzzle church-doors to let it in—
Nor half had reached the pitch sublime,
To which true *toques* and *brets* climb,
Leaving—like lofty Alps that throw
O'er minor Alps their shadowing away—
Earth's humbler bonnets far below,
To poke through life their faneless way.

However, sad as 'twas, no doubt,
That nymph so smart should go about,
With head unconscious of the place
It ought to fill in infinite space—
Yet all allowed that, of *her kind*,
A prettier show 'twas hard to find."

But hugeous bonnets were not the only follies there; for Folly himself was seen in *proprid personâ*, selling toys and trinkets, while he sung—

"Who'll buy? 'tis Folly's shop, who'll buy?
We've toys to suit all ranks and ages;
Beside our usual fools' supply,
We've lots of playthings, too, for sages—
For reasoners here's a juggler's cup,
That fullest seems when nothing's in it;
And nine pins set, like systems, up,
To be knocked down the following minute.
Who'll buy? 'tis Folly's shop, who'll buy?
Gay caps we here of foolscap make,
For bards to wear in dog-day weather;
Or bards the bells alone may take,
And leave to wit the cap and feather.
Trotums we've for patriots got,
Who court the mob with antics humble—
Alike their short and dizzy lot,
A glorious spin, and then—a tumble.
Who'll buy? &c. &c."

Here misers may their homes later
In shrouds of neat post-obit paper;
While, for their heirs, we've quicksilver,
That fast as heart can wish will caper.
For aldermen we've dials true,
That tell no hour but that of dinner;
For courtly persons sermons new,
That suit alike both saint and sinner.
Who'll buy? &c. &c."

No time we've now to name our terms,
But whatso'er the whims that seize you,
This oldest of all mortal firms,
Folly and Co., will try to please you;
Or, should you wish a darker hue
Of goods than we can recommend you,
Why then, as we with lawyers do,
To Knavery's shop next door we'll send you.
Who'll buy? &c. &c."

But surely we have shewn enough of this amusing volume to recommend it to its sphere of circulation.

"Fare ye well!—thus sinks away
All that's mighty, all that's bright—
Tyre and Sidon had their day,
And even a ball—has but its night!"

We have reserved our opinion of the music for our musical review; and shall merely add, that the whole cannot fail to please.

Lectures on Anatomy. Interspersed with Practical Remarks. By Bransby B. Cooper, F.R.S. Vols. I. to III. Royal 8vo. London, 1831. Longman and Co.

MR. BRANSBY COOPER fills, with credit to himself, the important situation of teacher of anatomy and surgeon in one of the largest hospitals in the kingdom, and it surprises us that, with these duties, he should find time to edit an elementary work like the one before us. The plan upon which it is conceived, that of combining descriptive anatomy with surgical remark, is extremely judicious; and what to

most authors would be rather a work of utility than of fame, cannot be said to be so to a surgeon of the author's opportunities, for the descriptive part is condensed in a clear masterly manner, and the practical portion contains much that is new and valuable. Surgical anatomy has, indeed, been too long neglected in this country, or, at least, so great a separation has been made between surgery and anatomy, that the knowledge of the influence which structure, form, and the relations of our organs exercise upon the frequency, the symptoms, and the mode of treatment of surgical maladies, was almost left to the judgment of the anatomist. The first appearance of topographical descriptions, or the study of the human body in regions, as applied to their surgical importance, which dates so few years back, formed a new era in the history of the profession; and it is not surprising that persons of any reputation whatsoever should, in this day, in writing a book of reference for his class, or in laying before the public what experience has made him consider a better mode of instruction, incorporate in an otherwise purely anatomical work the practical applications of that knowledge to the important science of operative medicine, certainly in the hands of those who cultivate it with the assiduity which it requires, and the judgment it demands, the most efficacious of all the resources of the healing art.

The first volume of Mr. Cooper's work is devoted to the osseous system, and the part essential to the skeleton, including synovial membranes, ligaments, cartilages, and fibro-cartilage. The last chapter of this volume, on the skeleton in general, opens a field for philosophical generalisation, which would not have been at all inconsistent with the plan of the work, and should, we think, never be neglected, as tending to give to the medical student enlightened and comprehensive ideas of the objects of his study.

The second volume contains the general descriptive anatomy of the muscles, and of the exterior structure of the body; and the third volume embraces the anatomy of the internal cavities and their contents. The great mass of physiological illustration given to this last volume is decidedly useful, without at all deviating from the original purpose. The distinction between internal and external medicine, as Coster has remarked, is as ridiculous as it is dangerous; and the healing art can never improve until all such differences are exploded. It will probably require two more volumes to complete the anatomy of the nervous, the arterial, and the absorbent systems.

There are, we think, some errors in the descriptive anatomy,—but where is there an anatomical work without? It will be extensively read; and forms an excellent manual of reference for the medical practitioner.

The Cabinet Cyclopædia, Vol. XXVI. Lives of Eminent British Military Commanders, Vol. I. By the Rev. G. R. Gleig. 12mo. pp. 359. London, 1831. Longman and Co.

SPECULATION is no longer chained to the floating argosy or the busy mart, but has wound itself round the very intricacies of our hearts; genius and learning wear its shackles; art, science, and literature, come fashioned to us from its hands. The evil consequences springing from this mischievous excitement are, unhappily, not confined to the individual actors, but communicate themselves through all the fibres of society: were we to attempt to enumerate the victims to scheming, volumes would not suffice—were we to enrol

its successful followers, how little space would they occupy! But ours is a literary vocation; and to the bearings which this question has on it, shall we confine ourselves. We have frequently been tempted, in the course of our labours, to enter into the consideration, whether the novel direction given to English literature by the projects of enterprising booksellers, in the Protean shapes of manuals, abridgments, pocket encyclopædias, and libraries, is likely to be of permanent benefit, or exalt us in the scale of lettered nations. We have, however, from time to time restrained ourselves, with the idea that if this state of things were injurious, it would, ere long, give birth to its own correction. But the volume before us leads us unwittingly to a branch of the subject, whether the employment of men eminent for genius and originality, on the set tasks of compiling and illustrating works whose dimensions are subject to square and rule, and are, moreover, of a trifling nature, has not a chilling effect on their noble faculties, and limits their free course of action. The race of learned and laborious men, who formerly filled the stations of compilers and abridgers, has been compelled to give way to names which, however brilliant in the fields of fancy and imagination, are not equally fitted to delve into the obscure mysteries of science, or loiter over the worm-eaten pages of deep research. Let us see what has been produced under the new régime; and, casting our eye over the thousand-and-one volumes which have thus appeared, we ask, how many are destined to survive the hands which reared them? The answer, almost without exception, is *none*. Nor are the eminent men who have thus applied their high powers well satisfied with the results; and as one example is better than a thousand precepts, we select a striking one from the volume whose title heads our notice. In the preface, the author speaks with sorrow and regret of the narrow limits within which *he was compelled* to confine himself, and also his considerable embarrassment and regret at being restricted by the plan of his work from pursuing the bent of his inclination. In the advertisement preceding the plan of the work by the admission of the Life of Cromwell, who is destined to figure as a statesman in some other division of the Cyclopædia. This is a sufficient exposition, had the work itself afforded no further development, of what is gained by the public in thus putting genius into leading strings. That Mr. Gleig's is an entertaining volume we must allow, for upon such a subject a feebleness would have made it so; that it is an instructive one we cannot admit, for no unknown sources of information have been explored, nor have the powers of the mind been very sedulously applied to throw their light upon many topics in connexion, which are either obscure or but partially understood. Haste in composition is manifest throughout; and when we state that three hundred and fifty pages comprise all that is said of English wars and warriors to the time of Marlborough, the imperfectness of the volume may be estimated. A better selection of eminent military commanders might, in our opinion, have been made; and we can scarcely allow a life of successful partisanship to entitle Sir Walter Manny to this distinction. Had the author turned his attention to the period of the York and Lancaster wars, he would, we think, have found many of the sites of contest easier of illustra-

tion; while his military *coup d'œil* and descriptive powers, assisted by local tradition, would have made this portion of his subject of higher interest, and more purely original. We think that opinions upon the corporal punishment of soldiers might have been as well omitted, being in direct opposition to English feeling and the practice of other military services. Mr. Gleig has followed Hume and others in censuring Jacob Von Artevelde; but we do not agree with him in stigmatising it a "*bad eminence*" to which the brewer of Ghent raised himself; for never was Flanders so flourishing, or so respected, as during the seven years of his administration: and we beg to refer the author (when his numerous engagements permit him the perusal) to M. de Barante's *Histoire des Ducs de Bourgogne*. In the introduction it is doubted whether any cannon, made of jacked leather, have been preserved. We are able to solve this doubt, having seen two ancient guns of small calibre, and of this material, in the armory at Malta.* We have now exhausted our quiver of barbs, and are prepared to say, that the production before us is one which will please—nay, inform the many,—and disappoint but the few. To youth, and all such as are disposed to look upon war as a *conjectural art*, we heartily recommend this pleasingly written volume, and illustrate our advice with a feat of broil and battle from the life of Sir Walter Manny, during his campaign in the south of France.

"Auberoche had been besieged and taken by Lord Derby and Sir Walter Manny, and a garrison placed it under the command of Sir Frank van Halle, Sir Alain de Finefroide, and Sir John Lendal. The two chiefs had then distributed their troops over the face of the country, and were themselves returned to Bordeaux, when the Count de Lisle gathered an army together, and advanced to recover it. He came upon the garrison so unexpectedly, that every avenue was at once shut up; and little care having been used to store the place with provisions, a scarcity may be said to have been felt by those within from the first commencement of the blockade. It was not, however, to famine alone, efficient though in such cases it is, that the Count de Lisle trusted for the subjugation of Auberoche. Four enormous engines accompanied his army, which threw stones of such size and weight, that not a roof within the place could resist them; and the garrison were in consequence shut up within the vaulted chambers that ran under ground in every feudal castle. Under such circumstances, many fruitless attempts were made by the governor to convey intelligence of the plight in which he stood to Lord Derby; till at last a servant, tempted by the offer of a large bribe, undertook to make his way unseen through the very heart of the besiegers' camp. He was let down by ropes from the rampart after nightfall, having letters descriptive of the existing state of things sewed up in his garments. He passed the advanced guards unnoticed, for he spoke the Gascon language, and named one of the lords of the army as his master; but, unfortunately missing his way in the dark, he was arrested amid the tents. Being searched, the letters were found on him, and his punishment was horrible. The Gascons thrust him into one of the machines, and shot him back, with his credentials tied about his neck, into

the place. The garrison of Auberoche now gave themselves up for lost; but matters were not yet so desperate as they imagined. Spies had already informed Derby of their condition; and, with Manny in his train, he was already in full march to their relief. Sending orders to Lord Pembroke, who commanded a detached corps at Bergerac, to join them with as little delay as possible, the two chiefs drew together a small but choice band of men at arms, and pushing rapidly upon Libourne, were there reinforced by the battalions of Lord Stafford and Sir Stephen Tombey. No halt was, however, made: on the contrary, they rode all night, in order to reach a place of concealment in the immediate vicinity of the beleaguered fortress, and they were so fortunate as to arrive at a wood only two leagues distant from it ere the sun rose. Here they halted, in the anxious hope that Lord Pembroke would soon come up; and, tying their horses to the trees, sat down to refresh themselves, of which they stood sorely in need. The total force thus brought into the vicinity of De Lisle's army amounted only to 300 men at arms, and 600 hobelers archers. De Lisle himself was known to be at the head of 10,000 men. It is not, therefore, surprising to find that, brave as the chiefs were, they experienced some irresolution as to the course which it would be proper to pursue. Once more was Manny the originator of a movement not less bold than judicious. 'Gentlemen,' said he, 'it were a shame to us, were our friends to perish and we so near them. Let us mount our horses, skirt this wood, and advance towards the enemy's camp; we will fall upon them unexpectedly, just as they are sat down to supper, and, with St. George to aid, they shall be discomfited.' The proposal was greeted with the hearty assent of all present. Each knight 'went to his horse, re-girthed him, and tightened his armour;' after which, commanding their servants, pages, and baggage to remain where they were, the whole set forward. By following the counsels of Manny, and keeping well under cover of the wood, this gallant band escaped the observation of the enemy, till they had arrived at the skirt of the wide plain on which the Gascon tents were erected. Further concealment was impossible; so they stuck spurs into their chargers, and shouting 'Derby! Derby for ever!' placed their lances in rest, and galloped forward. Never was surprise more complete. The French were slaughtered and trodden down before they could tell from which side danger threatened; De Lisle himself was wounded, and made prisoner in his tent; while, of his lords and knights, some were slain when hastily buckling on their accoutrements, and a still larger number taken. The garrison, hearing the cry of battle, rushed out to support their friends; and a victory, not less important than had yet been won in that quarter, crowned the efforts of Manny and his handful of heroes."

The account given by the author of the rise and progress of the British army is one of the most curious and interesting passages of the volume.

"We have taken occasion to observe, in more than one place, that since the Conquest there never was a period at which the kings of England did not retain in their service a number, greater or less, of mercenary troops. These were, indeed, too few, even at the most, to deserve the appellation of standing army; and being distributed among garrisons, exposed at all moments to hostile attacks, they may be said to have been constantly on active service. Thus, along the marches of Wales and Scot-

land, afterwards in Ireland, when by right of conquest that island became annexed to the English crown, we find bands of archers, bill-men, and even men at arms, constantly stationed; yet it is perfectly certain, that to Cromwell and the long parliament England is indebted for her first familiarity with a force, without which it is now admitted on all hands that she could not retain her rank among the nations. It is true that both Henry VII. and Henry VIII. made some advances towards the state of which we are now speaking. The former prince established fifty yeomen of the guard, which the latter increased both in efficiency and number; while Edward VI. mastered daily 100 archers, with as many halberdiers, none of whom Elizabeth thought it necessary to reduce. Nevertheless, even 300 body-guards (and to no more did this force amount) cannot with any propriety be treated as a standing army. It is scarcely necessary to add, that the corps to which we allude continues to flourish in its original costume, and almost with its original weapons; though the title of beef-eaters may be better known to the frequenters of the royal menagerie and the armory in the Tower. James I. brought with him into England neither infantry nor cavalry. His guards, afterwards received into the British service as the 1st, or Royal Regiment of Scots, went to France; where, till the year 1661, they continued earning a splendid reputation for gallantry in the field, and good conduct in quarters. Even Charles I. had no forces, except such as were required by the disturbed state of Ireland, till the breaking out of the grand rebellion; and then he rallied round him only those soldiers of the ancient array of the kingdom which were actuated by a sense of loyalty and veneration for old establishments. In like manner, the parliament leaned for support upon the trained bands of London, and upon such corps as money, or a mistaken principle of patriotism, induced to rally round their standard. There were no regular troops, properly so called, on either side. A long and arduous contest converted, it is true, a militia originally raw into veterans, and furnished scope for a display of considerable military talent among the officers; but it was not till the king had suffered, till rebellion had triumphed, to be in its turn ground under the yoke of a usurper, that a standing army became one of the establishments of this kingdom. Cromwell knew too well the value of his disciplined comrades, to deprive them of their arms at the desire of the people. He kept on foot, during the whole of his protectorate, an army both numerous and efficient for the times; and the consequence was, that he reigned with a degree of power more absolute than had been possessed by any monarch since the days of the Conquest. The first measure of Charles II., after his restoration, was to disband almost all the troops which Cromwell had kept on foot. About 5000 only, employed chiefly in garrison duty, were retained; the remainder, with the full concurrence of parliament, being discharged. Among the corps which were not dissolved, either then or at a subsequent period, may be enumerated the Coldstream regiment of guards. It had been raised about ten years previously, at Coldstream, on the borders of Scotland, from which circumstance it derived its name; and being commanded by General Monk, it was continued in the service out of gratitude to its colonel. The Coldstream regiment of foot guards dates its first formation from the year 1660. Two other regiments were then added, of which one, called the first regiment, was

* Lord Nugent, in his *Memorials of Hampden*, states that the artillery used by the Scottish army under Leslie, against Charles I. in 1640, was made of leather, bound round with iron hoops. It was brought into position on the backs of horses, and was calculated for little more than a single day's service.

given to John Lord Wentworth; while the other, or third regiment, claims as its original commander the Earl of Linlithgow. In addition to these household troops, the infantry of Charles II. consisted of the 1st, or Royal Scots; which, though entered upon the English establishment so early as 1633, was not brought over from France till the restoration; the 2d, or Queen's, raised in 1661, and commanded by the celebrated Lord Peterborough; the 3d, or Old Buffs, so called because their accoutrements were made of buffalo leather, and embodied in 1665; and the 4th, or King's Own, raised in 1680. These regiments have all been engaged in more or less of active warfare, from their first existence down to the campaign of Waterloo. With the exception of the Buffs, the facings have always been blue; but the former corps, as if to make amends for this defect, possesses the exclusive privilege of beating its drums through the city of London. Whence this distinction arose is not perfectly known; but the prevalent opinion is, that the regiment claims it because it was originally recruited from among the trained bands of the city. Among the cavalry corps in the British service, the two regiments of Life Guards, with the Horse Guards Blue, stand first upon the list in point of seniority. The Life Guards were raised by Charles II., one regiment in 1661, the other somewhat later; and their ranks were long filled up with gentlemen, cavaliers of family and distinction, who themselves or their fathers had fought in the civil wars. Both corps enjoyed, under such circumstances, numerous privileges, such as receiving superior pay, clothing, horses, and quarters. They were treated, moreover, in all respects, as the *Gardes-du-corps* were treated at the court of France; and, as generally happens, the regiments long retained these privileges after they had ceased to be composed of the class of men for whose sake they were granted. It was only in the year 1788, indeed, that a new system was introduced; yet even then something was conceded to them, of which their orderly and good conduct proved them not unworthy. Their pay was made better than that of other corps, and their officers were permitted to object to a trial, except before a court-martial, composed of members taken from the household troops only. The Blues, again, called also the Oxford Blues, from the title of their first commander, Aubrey, earl of Oxford, were embodied in the year 1661. They were then, and have ever since continued to be noted for their gallantry in the field, as well as their sobriety in quarters; having distinguished themselves in every war, from those under Marlborough down to the recent contests under Wellington. From the date of the restoration, the history of the British army becomes, in point of fact, the history of all the contests in which the British nation has since that period been engaged. Each successive reign, moreover, added something to its numbers and efficiency; and each successive war brought with it some striking improvement in the mode of drilling, arming, and moving the men. Thus we find James II. adding to his infantry force the 5th and 7th regiments of foot, both of them embodied in 1685, and both, but especially the latter, distinguished in every action in which they have had the good fortune to take a part. The 7th were, from their original formation, called the Royal Fusiliers; the Welsh Fusiliers, or 23d, were likewise embodied in 1688. To the cavalry, again, the same monarch added the 1st, or King's Regiment of Dragoon Guards, 6th June, 1685; and the 2d, or Queen's Dragoon Guards, likewise in 1685;

both of which, as their names denote, were trained to act indifferently on foot or on horseback, the men being armed with firelocks and bayonets, in addition to their swords and pistols. Thus the total establishment in 1684 amounted, including Guards, to 4000 men. But as James began to feel that his throne was not supported by the love of his people, he increased, year by year, the number, adding nothing to the real strength of his army; till, in 1688, there were of regular troops 20,000 in England, and in Ireland not less than 8000. All this, however, served not to arrest his fall. William came: the army, betrayed in part by its officers, forsook their prince, and the house of Stuart became again, and for ever, aliens and outcasts. Jealous of the power which a standing army appeared to place in the hands of their new sovereign, the English parliament hastened to declare that the keeping up of such an establishment without the consent of their body, during a period of peace, was contrary to the laws of the realm. The army was henceforth supposed to be held together only from year to year, the commons voting funds for its maintenance periodically; and even these they prefaced by particularising both the number of men to be raised, and the code of laws and regulations by which they were to be governed. All oppressive and violent methods of swelling the ranks were, moreover, forbidden. Vagrants and rogues might, indeed, be condemned by magistrates to serve both in the army and navy; but impressments, at least for the former force, were prohibited, and the right of the king to claim the personal attendance of his subjects was taken away. Nevertheless, no permanent diminution in the numbers of the British army was ever afterwards effected. William's circumstances compelled him, during the greater part of his reign, to increase rather than diminish the establishment of his predecessor; and the war of the succession, which lasted during the best portion of the reign of Queen Anne, increased it still further. From that moment, though invariably diminished on the return of peace, it has invariably enlarged itself so soon as hostilities have recommenced. Each new war has seen us bringing larger and better armies into play; and each new peace has witnessed the keeping up of a more numerous as well as a more efficient standing force. In proportion as the English army has thus assumed as it were a new consistency, numerous alterations have been introduced into the modes of arming, clothing, training, and keeping in order the different corps of which it is composed. His close and oppressive mail was gradually laid aside by the horseman, as tending little to protect him from the weapons which he was now required to face. Cuirasses lingered, it is true, for a time, as well as buff coats; but even these were at length abandoned, with a precipitation which has since been condemned. In like manner, the distinction between the cavalryman and the dragoon ceased by degrees to be recognised. The latter, exchanging his long firelock for the carbine, seems to have been rarely employed on foot, except under very pressing circumstances, since Marlborough's time; indeed, the one class of troopers became at last so completely amalgamated with the other, that to both was indifferently applied the appellation of dragoons. Nevertheless, a new and a better distinction arose; we began to divide our cavalry force into heavy and light, mounting a part upon fleet horses of high breeding, and keeping the other part to their original, strong, but active chargers. At the disbanding

of the army in 1698, the cavalry consisted of the life guards, horse grenadier guards, horse, and dragoons: the same distinctions held good till 1746, when a regiment of light horse was raised in Nottingham, of which the colonelcy was given to the Duke of Cumberland. The example thus set was not slow in being followed. In 1755 we find a light troop attached to each of the dragoon regiments. These being by and by withdrawn, were regimented by themselves; and, as they proved on many occasions exceedingly serviceable, their numbers were gradually increased. There was, indeed, a time, and that not very distant, when a fashion prevailed of holding all the other cavalry in disrepute: too many of our fine troopers were, in consequence, mounted upon horses more fit for the race-course than the field; and hence not a few of their steeds failed them at an hour when bone and muscle were more needed than sleek coats. But a better state of things has returned. The battle of Waterloo gave decisive proof that, however useful hussars and light dragoons may be in reconnoitering and outpost duty, it is the fine old English charger that carries all before him in the *mêlée*; and hence our heavy cavalry have of late more than regained in public estimation the place from which, through no fault of their own, they had fallen."

Eugene Aram. By the Author of
"Pelham," &c.

[Second Notice.]

WE resume this work, but more for the purpose of quotation than of criticism; we wish to make a cento of favourite passages, which for profound thought and accurate investigation, are perhaps scarcely appreciated in the first rapid progress of a narrative whose interest is so very absorbing. The following remarks upon youthful and glad spirits appear to us singularly true.

"I incline to believe that the more persons advance in years, the more, even if of staid and sober temper themselves, they love gaiety and elasticity in youth. I have often pleased myself by observing in some happy family circle embracing all ages, that it is the liveliest and wildest child that charms the grand sire the most. And after all, it is perhaps with characters as with books, the grave and thoughtful may be more admired than the light and cheerful, but they are less liked; it is not only that the former, being of a more abstruse and recondite nature, find fewer persons capable of judging of their merits, but also that the great object of the majority of human beings is to be amused, and that they naturally incline to love those the best who amuse them most. And to so great a practical extent is this preference pushed, that I think were a nice observer to make a census of all those who have received legacies, or dropped unexpectedly into fortunes, he would find that where one grave disposition had so benefited, there would be at least twenty gay."

As to Sir Peter Hales, is there one of our readers who cannot find a parallel to him?

"Men most prodigal when they have nothing but expectations, are often most thrifty when they know the charms of absolute possession. Besides, Sir Peter had married a Scotch lady, and was blessed with eleven children! But was Sir Peter Hales much altered? Sir Peter Hales was exactly the same man in reality that he always had been. Once he was selfish in extravagance; he was now selfish in thrift. He had always pleased himself, and damned other people; that was exactly what he valued him-

self on doing now. But the most absurd thing about Sir Peter was, that while he was for ever extracting use from every one else, he was mightily afraid of being himself put to use. He was in parliament, and noted for never giving a frank out of his own family. Yet withal, Sir Peter Hales was still an agreeable fellow; nay, he was more liked and much more esteemed than ever. There is something conciliatory in a saving disposition; but people put themselves in a great passion when a man is too liberal with his own. It is an insult on their own prudence. 'What right has he to be so extravagant? What an example to our servants!' But your close neighbour does not humble you. You love your close neighbour; you respect your close neighbour; you have your harmless jest against him—but he is a most respectable man."

How beautiful, as well as delicate, is our next extract!

"If there be any thing thoroughly lovely in the human heart, it is affection! All that makes hope elevated, or fear generous, belongs to the capacity of loving. For my own part, I do not wonder, in looking over the thousand creeds and sects of men, that so many religionists have traced their theology,—that so many moralists have wrought their system, from Love. The errors thus originated have something in them that charms us even while we smile at the theology, or while we neglect the system. What a beautiful fabric would be human nature—what a divine guide would be human reason—if Love were indeed the stratum of the one, and the inspiration of the other! What a world of reasonings, not immediately obvious, did the sage of old open to our inquiry, when he said the pathetic was the truest part of the sublime! Aristides, the painter, created a picture in which an infant is represented sucking a mother wounded to the death, who, even in that agony, strives to prevent the child from injuring itself by imbibing the blood mingled with the milk. How many emotions, that might have made us permanently wiser and better, have we lost in losing that picture!"

We need scarce point attention to the knowledge of real existence as shewn in the ensuing observation.

"In our estimate of the ills of life, we never sufficiently take into our consideration the wonderful elasticity of our moral frame, the unlooked-for, the startling facility with which the human mind accommodates itself to all change of circumstance, making an object, and even a joy from the hardest and seemingly the least-redeemed conditions of fate. The man who watched the spider in his cell, may have taken, at least, as much interest in the watch, as when engaged in the most ardent and ambitious objects of his former life; and he was but a type of his brethren; all in similar circumstances would have found some similar occupation. Let any man look over his past life, let him recall, not moments, not hours of agony, for to them Custom lends not her blessed magic; but let him single out some lengthened period of physical or moral endurance; in hastily reverting to it, it may seem at first, I grant, altogether wretched; a series of days marked with the black stone—the clouds without a star: but let him look more closely, it was not so during the time of suffering; a thousand little things, in the bustle of life dormant and unheeded, then started forth into notice, and became to him objects of interest or diversion; the dreary present, once

familiar, glided away from him, not less than if it had been all happiness; his mind dwelt not on the dull intervals, but the stepping-stone it had created and placed at each; and, by that moral dreaming which for ever goes on within man's secret heart, he lived as little in the immediate world before him, as in the most sanguine period of his youth, or the most scheming of his maturity. So wonderful in equalising all states and all times in the varying tide of life, are these two rulers yet levellers of mankind, hope and custom, that the very idea of an eternal punishment includes that of an utter alteration of the whole mechanism of the soul in its human state, and no effort of an imagination, assisted by past experience, can conceive a state of torture which custom can never blunt, and from which the chainless and immortal spirit can never be beguiled into even a momentary escape."

As from the very first the inference of Aram's guilt is drawn in the reader's mind, we shall forestall no interest by extracting the moral (one brief phrase) of the student's confession.

"And now came on the humbling part of crime—its low calculations, its poor defence, its paltry trickery, its mean hypocrisy! They made my chiefest penance."

We have not attempted to illustrate the noble conception of Eugene Aram's character, the enthusiast and victim of knowledge, by short specimens. It is a fine whole, and as such must be studied. We now leave these volumes to a long course of increasing popularity. With a moral code generous and exalted, with a fine feeling of the beautiful and of the good, gifted with the utmost eloquence of expression, our literature has few high places to which Mr. Bulwer's genius may not aspire. It is an honour both to ourselves and to that literature in whose cause we are but humble pioneers, when we offer the justice of sincere praise to the author of *Eugene Aram*.

A Manual of the Land and Fresh-water Shells of the British Islands, &c. By W. Turton, M.D. Small 8vo. with Illustrations. London, 1831. Longman and Co.

DR. TURTON is an old acquaintance in natural history, and the only objection we have to his present Manual is the too great neglect he has shewn of the researches of Mr. Alder, Captain Brown, and other conchologists, in keeping to the principle of only consulting his own cabinet. The work is prettily got up, and is, to our taste, a most fit and seasonable present for young people.

Examination Questions on Surgery and the Practice of Physic. By Sir C. Aldis, Surgeon, &c. London, 1831. For the Author. If this work is of any utility, then the mind of man has no essence of its own, but, like a flint, requires collision to produce a spark. If Sir Charles Aldis had put in the form of queries any of those intricate problems which infest the healing art, or examined in what examination is least likely to take place, we might have been able to understand his object. As it is, we confess we cannot.

Familiar Observations on the Formation and Diseases of the Teeth, with Maxims in Dental Surgery. By W. Hunt, Surgeon-Dentist. London, 1831. For the Author.

AN unpretending little pamphlet, which may be consulted by the general reader with advantage.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR JANUARY.

20^d 11^b 20^m—the Sun enters Aquarius.

Lunar Phases and Conjunctions.

	D.	H.	M.
☉ New Moon in Sagittarius	2	15	12
☾ First Quarter in Pisces	10	12	00
☉ Full Moon in Cancer	17	3	53
☾ Last Quarter in Virgo	24	8	3

The Moon will be in conjunction with

	D.	H.	M.
Mercury in Sagittarius	3	19	4
Uranus in Capricornus	5	6	0
Jupiter in Aquarius	6	2	30
Saturn in Leo	20	10	30
Venus in Ophiuchus	28	11	44
Mars in Ophiuchus	28	17	27
Mercury in Sagittarius	30	3	30

The conjunction of the Moon with Saturn will prove a close appulse to the southern part of the kingdom, to the northern an occultation, and to places intermediate a partial eclipse of Saturn, of different degrees of magnitude. This will be a very interesting phenomenon.

14—Mercury stationary. 54—in perihelion. 10^d 6^h 30^m—inferior conjunction. 21^d—stationary near 1st Sagittarii.

Venus, the morning star, is approaching the Sun; her illuminated disc is increasing, and diameter diminishing. This beautiful planet and Mars may be seen near to each other towards the close of the month.

The Asteroids.—Vesta, this month, is in a favourable situation for observation. 9^d—in conjunction with ξ Cancri. 25^d—in opposition between γ and ξ Cancri. It may be distinguished from the small stars near which it is moving by its pure white light, unattended with nebulosity. In a very favourable state of the atmosphere this small planet may be seen without the telescope. Juno is also advancing to a favourable position for observation: towards the latter end of the month it may be seen a degree north of 33 Sextantis Ursae. Pallas and Ceres are too near the Sun to be observed.

54—Jupiter in conjunction with μ Capricorni: difference of latitude 14'. This phase will soon be lost in the solar rays.

Eclipses of the Satellites.

	D.	H.	M.
First Satellite, emersion	15	5	49 39
Third Satellite	21	5	00 0

Saturn is gaining on the midnight sky, and Uranus is too near the Sun to be visible.

The year 1833 will be remarkable for several interesting celestial phenomena, of which the following is a brief sketch:

In February the Moon will occult Aldebaran, Regulus, Venus, and Mercury; it will also make a close appulse to Saturn and Uranus.

In March the last of the present series of occultations of Aldebaran will occur.

In April Saturn will be occulted by the Moon, which, though happening in the daytime, may be readily observed with a telescope.

In May another occultation of Saturn, under peculiarly favourable circumstances. In this month will take place the most interesting phenomenon of the present and many preceding succeeding years—the transit of Mercury across the disc of the Sun, which will be partially visible to Asia and America, and wholly so to Europe, Africa, and New Holland: its duration will be nearly seven hours. The last transit visible in this country occurred nearly thirty years since.

In July a minute eclipse of the Sun. To the northern counties of England it will be merely a contact of the solar and lunar limbs: to Scotland the Sun will be unobscured. Be-

tween the tropics this eclipse will be total; and as Venus at that time will be near her superior conjunction, and consequently close to the combined orbs of the Sun and Moon, she will probably be distinctly seen, and exhibit a very striking appearance during the transitory gloom.

In September the ring of Saturn will disappear, and continue invisible during October and November. At the commencement of December the northern plane of the ring will come into view, and again disappear in the spring of 1833, and not again be visible till the Midsummer ensuing.

Comet of Encke.—In the months of January, February, and March, this comet will be slowly wending its way through Places; in April it will have arrived at a position a little above the head of Aries, and, rapidly advancing from thence, attain its perihelion on the 4th of May, between the Hyades and Pleiades. Its approaching return will be unfavourable for observation, one revolution in three only being propitious for seeing it.

The comet of Biela, or comet of 1832, will enter these lower regions in the autumn of the year, and arrive at its perihelion on the 27th of November.

Deftford.

J. T. BARKER.

PARLIAMENTARY REPORT ON STEAM-CARRIAGES.

THE *Literary Gazette* having been the medium through which the first successful experiments of Mr. Gurney were communicated to the public, and having from time to time given several notices of the progress of Mr. Gurney and other gentlemen who have devoted their attention to the construction of steam-carriages, we have always taken an interest in this triumph of the useful arts, proportionate to what we have considered its vast importance to the public generally. It is therefore highly gratifying to find our view of the subject fully borne out by the Report of the committee of the House of Commons (just printed);—a Report not less distinguished for patient investigation of evidence, than for scientific and statesman-like appreciation of one of the most important branches of civil economy.

From the delay that has taken place in the introduction of steam-carriages on common turnpike roads,—a delay inevitable from the almost innumerable difficulties to be surmounted,—the public have been led to suppose that this novel mode of travelling had been totally abandoned; while parties hostile to the invention have not neglected to avail themselves of newspaper paragraphs to represent the thing as a complete failure. The contrary, however, is so far true, that the impediments which have been thrown in the way of this invention, by interested parties, have greatly outweighed those attending the construction of the engines, and in some cases have amounted to a complete prohibition of the use of steam-carriages in several districts.

The evidence of Mr. Gurney, and the other witnesses examined by the committee, is entitled to the deliberate and earliest attention of parliament; not less in justice to the parties chiefly interested, than for the good of the public generally. It has been proved to the satisfaction of the committee, that carriages can be propelled by steam on common roads at an average of ten miles per hour, with perfect safety to passengers, at less than one half the charge of present travelling, and the vehicle much better under the control of a conductor than a coach drawn by four good horses; and, in conse-

quence, much less liable to serious accidents than any stage-coach on the present plan.

But as an effective barrier against the adoption of such a desirable and economical mode of conveyance, Mr. Gurney states to the committee, that on the Liverpool and Prescott road, where a four-horse coach would be charged only a four-shilling toll, his steam-carriage would be charged 2*l.* 8*s.*; on the Bath road, instead of 5*s.* for four horses, his carriage would be charged 1*l.* 7*s.*; on the Totness road, instead of 3*s.* he would have to pay 2*l.* &c. &c.

Now, it is impossible to justify such exorbitant demands under any plea of the additional wear and tear of the roads; for we believe the weight of Mr. Gurney's heaviest carriage, which we saw three years since, did not exceed thirty-five cwt., or not double the weight of the six inside stage-coach; while the wear and tear of the road from the horses' feet is entirely obviated by the use of steam-carriages.

If the general introduction of steam-carriages could, by any possibility, sacrifice the interests of 2,000 persons out of 3,000, for the benefit of the minority we should hesitate in recommending parliament to lend its assistance by any legislative measures. But as the saving of expense in the transit of goods or passengers is an *absolute saving to the whole community*, of the agricultural produce consumed and the capital employed in the breed and maintenance of horses, it becomes a question of no less importance in agricultural and political economy than in commercial and social economy, to sanction by legislative protection any measure which has so direct a tendency to benefit the public generally.

Any arguments that could be advanced in favour of steam navigation have twofold greater weight, as applicable to steam conveyance by land. The saving of the maintenance of a number of seamen through the use of steam-vessels, may be a problematical benefit to a maritime nation like England, while these seamen must either be fed by the national funds, or allowed to emigrate from their native land. But a saving in horse-labour is an *absolute saving*;—a fact sufficiently established by the incalculable advantages this nation has derived within the last thirty years from the universal application of steam-engines in every extensive manufactory through the kingdom.

We regret that we are unable, from want of room, to give any extracts from the able Report of the committee; but as the Report certifies that the tolls which have been demanded by certain road-trusts for steam-carriages, would, if allowed to remain unaltered, entirely prohibit their use, we have little doubt parliament will speedily devise some measures to moderate the demands of these petty republics by some general enactment for consolidating road-trusts. In the mean time we beg to throw out a suggestion to Mr. Gurney and the other gentlemen engaged in the construction of steam-carriages, by which they might silence their opponents, and at the same time rather benefit than injure the roads by the use of steam-carriages.

As it is demonstrated that a steam apparatus of a given power will drag, or propel, a much greater weight if the load be divided among several carriages, than if it be all placed on one carriage, there can be no doubt that the plan of employing drag or tag-carriages will be generally adopted on common roads as well as on rail-roads. Now, if the axles of the different carriages, and even those of each pair of wheels, were made of different lengths, so as to make the wheel-tracks of each axle cover an

exterior or interior line of road, (instead of the road being worked into ruts, as in the common stage-coach,) the parallel planes of the respective wheel-marks will be almost equivalent in advantage to the broad-wheel waggon, which becomes a valuable heavy roller on loose roads, and is therefore subject to less tolls by the turnpike-trusts.

LITERARY AND LEARNED.

SOCIETY OF ANTIQUARIES.

MR. AMYOTT in the chair. Mr. Collier, by direction of the Duke of Devonshire, presented a copy of an original sketch-book of Inigo Jones, in his grace's possession, dated at Rome 1614. The great architect appears at that time to have devoted his attention to the human form, as all the sketches (with the single exception of a ship's prow) are on that subject. The book also contains a sort of diary of notes and observations. Mr. Waltham communicated the bailiff's accounts for the manor of Savoy, for the second and fifth years of Henry IV.; shewing the price of labour, &c. at that period. The secretary also read a description, accompanied by drawings, sent by Mr. Sibthorpe, of the skeleton of an ox or cow, found near a Roman pavement discovered in the year 1829, (and noticed in the *Archæologia*), at Broad Street Common, in the parish of Woodpleadon, Surrey: the bones were lying on boards, and were partially consumed; pieces of burnt wood were also found with them, and a quantity of saw-dust.—The meetings of the Society were adjourned to the 12th of January.

FINE ARTS.

NEW PUBLICATIONS.

Architectural Beauties of Continental Europe, in a Series of Views of remarkable Ancient Edifices, &c., in France, the Low Countries, Germany, and Italy. Engraved by J. Coney, from his own Drawings taken on the Spot; with Descriptive and Historical Illustrations, by H. E. Lloyd. London, 1831. F. G. Harding.

THE great popularity of Mr. Coney's Cathedrals has stimulated him to this new, and, we would almost say, still more interesting series. Nothing can be more spirited than Mr. Coney's outline; and in the choice and treatment of his subjects he has displayed the utmost taste and skill. Rouen, Antwerp, Beauvais, and Louvain, have each furnished him with delightful objects on which to exercise his talent; and with the short accounts also given of them, he has produced a work highly creditable even to his acknowledged abilities.

View of the City of Bristol. Drawn by T. Rowbotham; on Stone by L. Haghe. London, Tilt; Bristol, Davy and Muskett.

THE grain of this drawing on stone is of a peculiar kind; and it is impossible to convey a clearer idea than it does of the awful calamity the artist has chosen to represent. Bristol, in flames, may thus descend to posterity—a melancholy example of the march of intellect and civilisation in the nineteenth century.

Portrait of Francis Buckle. Painted by R. Jones; engraved in line by W. C. Edwards. Peterborough, S. Buckle.

A VERY striking likeness of our famous jockey, who has won so many plates that he is fully entitled to the honours of this. There is much of character in the countenance; and when we reflect upon the qualities essential to a first-rate jockey, we shall not be surprised to find their

indication in a clever production of art. Resolution, coolness, rapidity of action following instantly upon rapidity of glance, judgment, and temper, must all conspire to form a Buckle; and they are all to be traced in this well-executed portrait.

Spaniel. Painted by J. Fernely; engraved by E. Duncan and J. Webb. London, R. Ackermann, jun.; Melton Mowbray, J. Fernely.

AFTER celebrated rider we come naturally to celebrated horse—Lord Lowther's Spaniel, brother to Lapdog, and great great great grandam Miss Belsea! With fifty to one against him, he won the last Derby cleverly, beating Riddlesworth and other crack horses: since that time, however, he has done nothing to sustain his reputation. In appearance there is little remarkable about Spaniel. He looked a slight creature among some of the others at Epsom; and the odds shew how little he was expected to come in first.

Edinburgh. Drawn by W. Purser; engraved in Aquatint by R. G. Reeve. London, 1831. Smith, Elder, and Co.

THIS noble view of Edinburgh is the thirty-seventh plate of the publishers' series of the principal Towns in Scotland, and, being the capital, we may truly state, that it justly maintains its claim to be placed at the head of them all. It is taken from Arthur's Seat; and not only in the broken foreground, but in the extent of town and country, is executed in a grand style of art. We may compliment it as being indeed the Modern Athens, for it contains the most recent features of the Scottish metropolis. Mr. Purser has evinced a talent not inferior to Daniell in his judicious treatment of the whole.

MOSAIC PAINTING.*

Naples, November.

IMMEDIATELY on the discovery of this *chef-d'œuvre*, our archaeologists proposed two different hypotheses for an explanation of the subject represented in the picture. Signor Aditi, the director of the royal museum, supposes it to be a combat of the Greeks with the Trojans, and the one in which Sarpedon fell. On one side he recognises Patroclus, who has pierced the Trojan hero with his lance, in the act of pursuing his enemies; and near him Eryalus, who has been struck on the head, lying close to his wounded horse Pegasus. On the opposite side he makes out Glaucus, in his chariot, animating the Trojans, at the instant when his horses, encouraged by the driver of the chariot, are hastening over the flying and the slain towards the gates of Troy. Avellino and Quaranta, both professors of the museum, are, on the other hand, of opinion that it represents one of the battles between Alexander and the Persians; but they so far differ, that the former considers it to be the battle of the Granicus, the latter that of Issus. We may perhaps be able to decide which of these learned professors has the best grounds for his interpretation, from the description which has been published of this picture, after a consideration of these various opinions, in the *Giornale del Regno delle due Sicilie*, and of which the following is the substance.

The principal figure is a warrior on horseback, with a flowing robe, the head of Me-

dusa on his breast-armour, and a sword suspended from his belt. Both his arms are encircled with lightning; his head is uncovered; and he appears to have just hurled a lance, which has penetrated the body of a youth, who also seems to have been mounted, but the horse, which has been struck by another lance, falls down bleeding, while the dying hero sinks with a convulsive movement and an expression of agony which is beyond description striking. The opinion of those who consider the enemies to be Persians is favoured by the covering of his head, which conceals his ears and chin, and by his wearing ear-rings and a necklace. Between the victor and the vanquished are two figures, one with a helmet, the other with his head uncovered and wounded. On the other side are many warriors, with the same head-dress and ear-rings, in disorderly flight. One of them leads a horse by the bridle, which is seen from behind rearing, admirably foreshortened. Another conspicuous figure, with a bow in his hand, wearing a tiara, and clothed in a chlamys, stands in a magnificent quadriga, the horses of which are urged on by the driver with much spirit.

Unhappily this mosaic is not entirely preserved: a portion of the body of the principal figure, that of the victorious horseman, as well as of his horse, is wanting. The costume, the ornaments, and the armour of the fugitives, all seem to indicate that they are Persian. If this point is once decided, no doubt can remain that the brilliant warrior is Alexander, particularly as he is armed with the thunderbolt, as it is well known that Apelles so represented him. But in which of his battles is he here drawn? In that of the Granicus, according to Arrian's account, which is followed by Signor Avellino, the lance of the King of Macedon broke, and he pierced Mithridates, the son-in-law of Darius, with the lance presented to him by Demaratus of Corinth. Another Persian, Ræaces, aimed at the head of Alexander, by which he lost his helmet, without, however, being wounded. All this, together with the flight of the Persians after the death of Ræaces, seems to agree entirely with the representation in the picture.

If this hypothesis of Professor Avellino is correct, we might probably consider this mosaic as the copy of a painting of the battle of the Granicus; but, as he remarks, it could not be that of the celebrated one mentioned by Pliny (*nulli postferenda tabula*), because that represented the battle between Alexander and Darius; and the latter, it is well known, was not present at the Granicus.

Professor Quaranta, on the other hand, borrows from the account of Diodorus and Quintus Curtius his arguments for considering this as the battle of Issus. In the same figures he recognises Alexander and his generals on the one side, and the Persians on the other. The King of Macedon decided the battle by his cavalry, commanded by Parmenio, which he called to his assistance when he was already surrounded by the Persians. He fought in the heat of the action like a common soldier, forcing his way to the chariot of Darius, which Ocsatres, the brother of the Persian monarch, attempted to defend. From this, Professor Quaranta gathers, that the warrior fighting at the left hand of Alexander, and crowned with laurel, is Parmenio, as he received this distinction after the battle of the Granicus; and that the warrior who is vanquished by the Macedonian hero is a chief commander of the Persians.

Professor Quaranta finds a decisive proof of the correctness of his opinion in the figure

standing in the quadriga, which he thinks can be no other than Darius, as he is sufficiently distinguished by the royal tiara, which he alone wears.

This mosaic, therefore, may still be the copy of the painting commended by Pliny, which was painted by Philoxenes of Eretria, for King Cassander; unless, as Professor Quaranta is more inclined to suppose, it should be one of a painting of this battle by Apelles.

The mosaic is twenty palms broad and ten high: the figures are more than half the size of life. The whole composition is wonderfully animated; the perfection and delicacy of the drawing (the more admirable in a mosaic), the truth of the expression which characterises all the figures, make this work one of the finest monuments of Pompeii. It is much to be regretted that this beautiful *chef-d'œuvre* is not in perfect preservation; but even in its present state it is a treasure quite unique in its kind.

P.S. — My letter was just finished, when I received from Professor Zahn, who has resided for above a year at Pompeii, such interesting remarks on this subject, that I cannot delay communicating them to you. He fully agrees with me in the praise I have bestowed on this work, and this praise must have more weight coming from him, because he speaks as a connoisseur, and pronounces this painting to be superior to any mosaic with which we are acquainted.

Professor Zahn was also one of the first who declared this mosaic (which contains above twenty figures almost the size of life) to be a representation of a battle of Alexander with the Persians. He is of opinion that it is the production of the first Greek artists, in the most flourishing period of the arts; and that perhaps already at the time of its removal to Pompeii it might be regarded as an antique: for it is well known that the mosaics composed of pieces of marble are of the earlier ages, and that subsequently they were composed of paste; and, secondly, (and this justifies the bold conjecture of its removal hither,) it appears that this work was already injured by the lapse of time, when it was removed, perhaps from Greece, in the condition in which it now is, to the place where it was discovered, respecting which the "antique restoration" scarcely leaves a doubt. By this you are not to understand a proper restoration, on which the artists of that time, deterred, perhaps, by the excellency of the work, were afraid to venture; but the defective piece is merely filled up with plaster of Paris, to make the whole one level floor, and keep the parts together.

I will add some particulars, likewise communicated by Professor Zahn, respecting this house, named after Goethe. Resembling, in its admirable internal arrangements, the house of Pansa, it may be ranked, on account of its perfect architecture, among the finest in Pompeii—besides its being the only one in which such treasures of art in bronze and mosaic have been found. Already, on the 15th October, 1830, there was found a mosaic, with two colossal masks; and on the 27th, in the impluvium, a dancing faun three feet high, belonging to the most beautiful specimens of bronze figures; and on the 10th of December last year, a mosaic, representing a winged Bacchus riding on a panther, which, till this new discovery, was considered the finest of this kind of works of art; besides a great variety of vases, rings, ornaments, coins, &c.

The excavation of this interesting house is continued with great activity, and will be completed in December, or, at the farthest, in Jan-

* This large mosaic painting was found in the triclinium of the house named in honour of Goethe, and opened in the presence of his son on the 7th October, 1831, which is also called the House of the Faun, from a fine bronze statue of a faun found in it.

1832. I must not omit to mention, that a party of Germans and other foreigners celebrated Goethe's birthday in this house on the 28th of August last, and commemorated the event by a medal, with Goethe's bust, and on the reverse, "To Goethe, 28th August, 1831: Pompeii."

Some months ago, Professor Zahn discovered near Portici, in S. Giovanni, in the Villa Bisaggi, the Street of the Tombs of Herculaneum, which led to Naples. The attention of the Neapolitan government having been thus attracted to the spot, orders have been issued to commence excavations there, which may probably lead to an interesting result, and with little expense, because that part of the suburb of Herculaneum is not covered with lava, like the town itself, but, like Pompeii, with ashes only.

Of another much more important, and very recent, discovery of our active countryman, on another side of the base of Vesuvius, I am not yet permitted to speak; but I hope that I shall soon be released from the silence which has been imposed on me.

SKETCHES OF SOCIETY.

THE GARRICK CLUB.

It may be remembered, that when three hundred members were elected, the Garrick Club was to be considered as formed, and their house in King Street to be opened. This having been already done, and all the necessary alterations in the house, to prepare it for a numerous club, being nearly completed, we understand that the list of candidates must now await a time before they can be balloted for. The Club will probably be opened with a grand dinner on Saturday the 21st; previous to which, we presume, the subscriptions must be paid up; so that the Garrick may shew the rare example to clubs, of beginning on an economical scale and unencumbered with debt. Its ulterior objects will, of course, be gradually developed; and we trust the drama will benefit by this institution, so opportunely established in its favour.

We are happy to add, that the list of members is distinguished by many names high in nobility, in literature, and in the drama.*

DRAMA.

It happens, oddly enough, that the authors of the pantomimes at both the winter theatres have chosen the same subject for the exercise of their respective talents. Now, whether this coincidence arises purely from accident—or whether, as each party may insinuate, there has been treachery as well as trickery at work—or whether, again, it is to be accounted for from the paucity of stories fit for such productions—is a point we cannot take upon ourselves to determine. We have thought it necessary to record the interesting fact; and we can only say, that the similarity between the two pieces is so great, not only in the introduction, but in the scenes which follow it, that it verifies to our entire satisfaction the remark of Sheridan in the *Critic*, that when the people in the theatres "do agree, their unanimity is wonderful." There is another circumstance also, about which, until we can find time to get to the Museum, and consult the original history, we must be content to remain in doubt—and

* Among our purposes for the ensuing year, it is one to publish a series of papers connected with this association and the interests of the stage, which we trust will be humorous and beneficial enough to deserve collection in future volumes.

that is, which of the writers has adhered most strictly to the ancient legend; for, as Sir Benjamin observes in the play, about the story of the duel, though one "may be more circumstantial"—the other may be "the true one after all."

Having noticed this important matter (and we can assure our readers, that where so much of the profits of a season depend upon the pantomime, it is an affair of some consequence to managers), we shall proceed to state the result of our anxious and impartial observations.

At Drury Lane there is some scenery by Andrews, particularly the "outside of Thumb's cottage" and the "water-mill near Canterbury," which is very well painted; but there are also some very middling scenes, and one or two very great daubs, by other painters; and, upon the whole, we must observe, that the scenic department this year has not been so well executed as upon many former occasions. From this censure we of course exempt the splendid diorama painted by the inimitable Stanfield. This picture (for we can call it by no other name) represents a series of views in the city of Venice, all of them executed in the first style of art, and forming alone a most delightful exhibition—in fact, if the pantomime is destined to last its usual term of existence, it will be owing solely to the beauty and the verisimilitude of the Venetian diorama. The tricks, which are by no means numerous (we do not expect them to be new), are some of them neatly done; and some strokes of satire, particularly those levelled at Paganini, the Select Vestry, and the Temperance Societies, seemed to afford some gratification to the audience; but the actors are very far from being the best of their kind; and, altogether, the harlequinade must be pronounced greatly inferior to almost all which have preceded it.

At Covent Garden, on the other hand, we were much more amused. Here the Thumb family, the Ogre and his fat cook, and the seven-leagued boots, and the genii thereof, occupy a much greater portion of the business of the pantomime; and the admirable acting, singing, attitudes, and fencing of the little Poole, prevent any feeling of tediousness which the length of the story might otherwise produce. Of the scenery, likewise, we can speak in terms of unqualified approval. It is painted chiefly by the Grieves, and does them the greatest credit. "The palace of Bala," "the Ogre's castle by moonlight and sunrise," and the "Temple of the Genii of the Harp," are particularly good; nor must we omit to mention favourably the "Cosmorama," by the same artists, which represents the royal visit to the new London Bridge, and which, though certainly not to be compared to Stanfield's Venetian scene, is, nevertheless, correctly painted and ingeniously contrived. The jokes of the Clown and Pantaloon, practical and otherwise, are by no means bad. We would particularly notice that of the Clown's attempting to snuff the moon, that the Pantaloon may read a letter by its light; the conversion of a "vender of the dead languages" into a "dealer in the unknown tongues;" and the change of a box containing the "wonder of the world" into the representation of a full concert, with Paganini at its head, fiddling lustily away, and stretching out his leg and bestriding all the other fiddlers like a "huge Colossus." The actors, we need hardly say, were quite at home in their respective parts. Ellar is a good and agile harlequin, and Barnes is by far the best pantaloon that has been seen within our me-

mory. Paulo, too, is active as a clown; though if he would talk a little less he would be much more entertaining. And Miss Davis, the new columbine, is pretty fair—neither much better nor much worse than her competitors. The greatest praise appears to us to be due to Farley, for the excellent way in which he must have drilled the carpenters and shifters, and for the zeal with which they did their duty; for although the changes of scene were most numerous and most complicated, not a single mistake of consequence occurred. The whole was received, on the first night, without the slightest dissent; and, when it comes to be cut (for it is greatly too long), will be well calculated to please the little masters and misses to their hearts' content.

THE ADELPHI.

THE pantomime at the Adelphi is the best of the best. The Old Woman who lived in a Shoe has long been a favourite with all young and imaginative persons: she will now augment her attractions and increase her fame—and the Adelphi will rejoice in her popularity. The story is capitally adapted for the purpose, and the principal actors at the Adelphi are quite extraordinary in their combined exertions. For tricks, postures, laughter-moving fun and frolic, and in short for all the requisites belonging to this branch of the mimic art, we have hardly ever witnessed a superior exhibition. Nor is the scenery unworthy of the performances—some of it is pretty and graceful as the columbine, some various as the harlequin, and some grotesque as the clown. Altogether, this is a sterling treat to the lovers of Christmas merriment.

OLYMPIC.

OLYMPIC Devils! We are too much troubled with devils (quere, are printers' devils—they ought to be—blue?) to have any predilection for them elsewhere. Yet here they are, bearding the select Vestries,* and annoying—no, we cannot say they are annoying us. Witch-street is out of our way, notwithstanding the fair manageress; and as for Holy-well, we have a new Christmas suit, and leave it the Jews and Skinner's-street. The nymphs of Solomon, as Pope calls them,† have no song wherewith to inspire us; in fact, as critics, we have detected that this song is a catch. The *Olympic Devils* are nevertheless such clever devils, that they are likely to improve the neighbourhood; if crowds (population) and laughter (mirth) be improvements, which we, considering them to be excesses, excessively doubt. The very play-bill of the Olympic is an insult to gravity; though as we cannot have this bill, the whole bill, and nothing but the bill, we will not trouble it with our animadversions. Suffice it to say, that if puns carry with them their own punishment, this is an eterno-inferno offence. In the piece itself, a more than clever burletta, the sad story of Orpheus and Eurydice is humorously dramatized. It is classically correct and droll. Mr. J. Bland, as *Pluto*, has made a hit which must exalt him from his low estate far above the mortal reputation he has already acquired; and Vestris is an *Orpheus* fit to call any body back from the shades. The whole burletta is very excellently performed, and the final procession is far superior in design and beauty to any thing expectable. Parody and fun, and popular music (by Horn) rule the roast. We quote a sample.

* Is it not Vestris, Sir?—Printer's Abaddon.
† Is it not Solyms, Sir?—Printer's Lucifer.

"Voulez vous danser while I play?
Trees make bows and stump away;
Lawns and meadows dance the Hay,
And rocks to reel are fain, sir.
Rivers join the Country Dance,
Streamlets in Quad-rills advance,
Fountains cool
Glide through 'la pool,'
And Pastoral—the Plains, sir.
Voulez vous danser while I play?
Panthers Paw de Deux essay,
And lordly Lions waltz away,
With all their might and mane, sir."

VARIETIES.

Bilderdyk, the celebrated Dutch poet, died recently at Haarlem, and was buried in the principal church there with great pomp, on Friday the 23d inst.

New Musical Instrument.—At the last week's sitting of the Academy of Science in Paris, M. Cagnard Latour read a paper on the subject of a new musical instrument of his own invention, which he calls "the Syren" (*la Syrène*). It is a sort of flute, in which the sonorous vibrations are produced by the action of a current of water, as in the common flute by a current of air. — *Sunday Times*.

The Cholera Morbus, respecting which we see several inquiries, and which is alluded to in the mortality list of the city of London, is a disease which has existed from time immemorial in this country, and has no other relation to the disease at present ravaging the towns on the Tyne and Wear, than in the deceptive and unfortunate name which has been given to the latter. We say unfortunate, because it leads to a mistaken notion of the nature of the disease—to the promulgation of useless remedies and empirical nostrums—and to errors similar to the one which we have felt ourselves called upon to correct.

"I like a child that cries," said the Abbé Morellot. "Why?" "Because then it will be taken away." — *Le Livre des Cent-et-un*.

Novelist.—A Correspondent tells us that the author of *Rank and Talent*, *Atherton*, &c., and the recent novel of the *Usurer's Daughter*, was originally a Blue-Coat boy, and is now a Unitarian preacher, residing (1830) at Bury St. Edmunds; and that his name is Scargill.

Association for removing the Causes of Ignorance and Poverty.—This newly-formed association has had several meetings—the last being the "first social" one, at the institution in Liverpool Street, New Road, where it has spacious rooms for assembling. The entertainments were at least musical; for, after tea, the overture to *Tancredi* was performed on the pianoforte by Misses Lanza and Bromley; and then Mr. Owen, the governor, gave the company (stated to amount to nearly two thousand persons of both sexes) a lecture, illustrative of his system. We had forgot that a clergyman, of the name of Wade, also addressed the meeting. The whole was concluded by a ball, which was kept up to a late hour; and while it occasionally exhibited some little ignorance in the art of dancing, displayed nothing of the poverty against the causes of which the association is to direct its efforts, whether of tea, lecturing, or tripping it on the light fantastic.

Hampden and his Times.—Having noticed one topographical error in our review of this work, seems to have called the noble writer's attention to these minutiae; and we are requested to mention a second misprint in the same volume, in order that they may be corrected with a pen by the reader in the copies already circulated—Vol. II. p. 435, l. 6, for *hunc* read *hoc*.

Mortality Returns.—By a return just published, and coming whence the poet has, of

course erroneously, told us there is none, we learn that between December 15th, 1830, and December 13th, 1831, there have been buried in London 25,337 individuals, of whom 12,769 were males, and 12,568 females. To be sure the christenings have made amends, for they amount to 28,263; so that there is no comfort yet on this side of Sunderland for Mr. Malthus and his school.

The Cholera.—It would not be easy to find a better proof that the cholera is not contagious, than the annual fair which has just been held at Pesth. Strangers and merchandise from the parts of the empire where the disorder is the most violent, came hither without being subjected to any quarantine whatever, and yet the sanitary state of the city, during the fair, was perfectly satisfactory, and not a single suspicious case occurred. At present the disorder rages in only a few places in Hungary; and we must repeat here a remark well worthy of attention, viz. that wherever the disorder does not manifest itself with great violence at the outset, and carry off a proportionably large number of victims, it lingers in the place so much the longer. Numerous instances prove this. At Berlin and Vienna it is mild, but remains twice as long as at Pesth and Ofen. How dreadfully did it rage in Egypt, where its duration was, however, short. This has been confirmed by experience in Hungary, almost without exception, where, according to the general summary of its progress, founded on official reports up to 29th November, it had affected, in 89 districts, 3885 places, in which the number of persons attacked by the disease was 439,545, of whom 218,760 have recovered, 180,525 died, and 31,260 still remain under medical care.—*From a Letter, dated Pesth in Hungary, Nov. 30.*

The Pleasures of Memory?—A lady of fashion, at Paris, said lately to her chamber-maid, who was dressing her, "How weary I am of this mourning—I have worn it fifteen days! But, apropos, Rosina, tell me, for whom am I in mourning?" — *Paris in London*.

Science!—At Capt. Browne's request we copy the following: our readers may believe the propositions or not, as they like.—*Ed. L. G.*

Interesting to Science.—Bets to a considerable amount have been offered by Capt. Browne upon the efficiency and capability of the following novel inventions:—*Rail-roads*. By means of a rail-road on an entire new construction, and by the adoption of a propelling power not hitherto made use of on rail-roads, it will be proved, that under the supposition of a continued ascent for 100 miles, at thirty degrees of elevation, with a carriage containing eight persons, the distance may be accomplished in two hours. To be decided by a board of scientific men.—*Balloons*. It will be proved, that a balloon, directed to any one spot or quarter of the compass, may be driven there by the wind from either of the three other quarters. This has been a theory often held, but which has always failed in practice for want of a counteraction below. Also to be decided by a board of scientific men.—*Cavalry*. It will be proved, that by a new invention adaptable to cavalry, the latter may break through masses of infantry with but little loss. This to be decided by a board of officers. This invention has been tendered to government, but it appears that at the Horse Guards they are not empowered to offer any reward for new inventions.—*Infantry*. Captain Browne will undertake to prove, that, by his new invention, three hundred raw recruits, say working men, or Irish labourers, with a few days' drilling, and only armed,

offensively, with pikes or spits, and at an expense under two pounds per man, will beat the same or double the number of regular troops. This to be decided by a board of officers. The test to be, supposing two bodies of troops to encounter in a street, which would have to give way. It will be proved, that should the regulars stand the charge, a great slaughter of them would ensue, while few, if any, of the pikemen or spitters would suffer from the fire or bayonet.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertiser*, No. LII. Dec. 21.]

A publication entitled *Britain's Historical Drama*; being a Series of National Tragedies, intended to illustrate the Manners, Customs, and Religious Institutions, of different early Eras in Britain.—is announced by J. F. Pennie, and dedicated, by permission, to the King.

Mr. Ainsworth is preparing for publication, *Observations on the Pestilential Cholera*, as it appeared at Sunderland in the Months of November and December; and on the Measures which were taken for its Prevention and Cure.

The Mythology of the Hindus, with Notices of various Mountain and Island Tribes who inhabit the Two Peninsulas of India and the neighbouring Islands, by Charles Coleman, Esq.

A new literary Annual, entitled the *Aurora Borealis*, to be conducted by Members of the Society of Friends, is announced at Newcastle. The prospectus speaks, with proper exultation, of the progress of literary taste, and the increase of literary talent, among the youth of that Society.

LIST OF NEW BOOKS.

Lardner's Cyclopaedia, Vol. XXVI., Treatise on Pottery and Glass, fcp. 6s. cloth; *Republication*, Vol. I., Scott's Scotland, Vol. I., 6s. bds.—Annual Biography and Obituary for 1832, Vol. XVI., 8vo. 15s. bds.—Hooper on the Uterus, 4to. 3l. 3s. bds.—Lord Byron's Life and Works, in 14 vols., Vol. I., fcp. 5s. bds.—Botanic Annual for 1832, crown 8vo. 15s. morocco.—Eugene Aram, by the Author of "Pelham," &c., 3 vols. post 8vo. 1l. 11s. 6d. bds.—Standard Novels, Vol. XI., Hungarian Brothers, by Anna Maria Porter, 12mo. 6s. cloth.—National Library, No. XIII., Lives of Celebrated Travelers, Vol. III., 12mo. 6s. cloth.—The Modern Novellists, with Prefatory Remarks, 8vo. post 8vo. 15s. cloth.—Nicholas's Memoirs of a Successor of Sacred Literature, Vol. II. 8vo. 15s. bds.—The Crucified Jesus, by Dr. Horneck, 12mo. 6s. 6d. bds.—Kearney's Tax Tables for 1831-2, 1s. sewed.—Williams' Abstracts of the Acts for 1831, 8vo. 7s. bds.—The Mother's Book, by Mrs. Child, royal 12mo. 4s. cloth.—Hughes' Divines, No. XX., Hall's Contemplations, Vol. III., 8vo. 7s. 6d. bds.—Valpy's Classical Library, No. XXV., Plutarch, Vol. III., 12mo. 4s. 6d. bds.—Select Library, Vol. V., Stewart's Visit to the South Seas, abridged by Rev. TO CORRESPONDENTS.

Having Title-page and Index to give on this sheet, (for we utterly disapprove of the use of carrying readers into a new year, by detaining from them what belongs to the present), we are compelled to withhold all advertisements but those of an absolutely temporary kind. And even with this arrangement, we must offer our last publication for 1831 in a very mutilated form, abridged in many of its fair proportions. We can only promise to begin 1832 with renovated vigour.

C. C.'s anecdote is pathetic, but we fear the poetry will not do. "Cause" and "house," for example, are inadmissible rhymes.

Our Index, &c. must, as is always the case on this single annual No., be our apology for its being the least effective of its more than Danaean brethren. The first No. of the Theological Library (of necessity omitted in Review) cannot be passed over without our attestation in its favour. It is literal, and not a fashion of speech, when we say that above a hundred claims of public interest, amusement, and merit, lie ever upon our conscience.

ADVERTISEMENTS,
Connected with Literature and the Arts.

BRITISH INSTITUTION,
PALL MALL.

NOTICE TO EXHIBITORS.
All Pictures and Works of Art intended for Exhibition and Sale must be sent to the Gallery on Monday, the 16th, and Tuesday, the 17th, of January next, between the Hours of Ten in the Morning and Five in the Evening, after which time no Picture or other Work of Art can be received. Portraits and Drawings in Water Colours are inadmissible.
N.B. No Picture will be received for Sale that is not bona-fide the Property of the Artist.
WILLIAM BARNARD, Keeper.

UNIVERSITY OF LONDON SCHOOL.
On Monday the 28th of January, 1853, a School will be Opened within the building of the University, under the government of the Council, and under the constant superintendence of the Professors of Latin and Greek.
The hours of attendance at the School, on the first five days of the week, will be from a Quarter past Nine to a Quarter past Three—in which time one hour will be allowed for recreation. On Saturday the School will be closed at a Quarter after Twelve. The vacations will be seven weeks, from the 15th of August to the 1st of October, three weeks at Christmas, and ten days at Easter.

The yearly payment for each Pupil will be 15*l.*; of which 5*l.* will be paid in advance at the commencement of the Term after each Vacation.
The Pupils will provide Books and Drawing Materials. No Boy will be allowed to remain in the School after the completion of his sixteenth year.
The subjects taught will be Reading—Writing—the Properties of the most familiar Objects—natural and artificial—the English, Latin, Greek, and French Languages—ancient and modern History—Geography, both physical and political—Arithmetic—the Elements of Mathematics and of Natural Philosophy. Those Pupils will be allowed to learn German who shall be considered to have made sufficient progress in their other studies. Drawing also will be taught to those for whom it may be desired. But neither for German nor Drawing will there be any extra charge. The discipline of the School will be maintained without corporal punishment.

There will be a general Examination of the Pupils at the end of each Term, and the Prizes will be given after the third Examination. A monthly report of the conduct of each Pupil will be sent to his Parent or Guardian.
Council Room,
28th Dec. 1851.

THOMAS COATES.

UNIVERSITY OF LONDON SCHOOL.
The Professors of Latin and Greek are desirous of engaging the following Assistant Masters:—Two Classical Assistants, one of whom will take charge in the English department—a General Assistant in English and Latin, who shall be competent to prepare the Pupils for the French Master—a Drawing Master—and a Writing Master. It is requested that applications, accompanied by statements of qualifications and testimonials, be addressed to the undersigned, and conveyed to the Office of the University free of expense.

T. HEWITT KEY, M.A.
HENRY MALDEN, M.A.

SOCIÉTÉ DES PROFESSEURS de LANGUE FRANÇAISE.
Le Bureau sera ouvert les 4, 5, 6, et 7 Janvier, de Midi à 4 heures; à l'effet de donner des Renseignemens à ceux de MM. les Professeurs qui désireront s'en procurer.
L'Assemblée générale aura lieu le 9 Janvier, à 8 heures du Soir.
D. LÉPÉE, Secrétaire.

8, Carlton Chambers, Regent Street.

EDINBURGH REVIEW.—Advertisements for insertion in the Advertising Sheet of No. 108, are requested to be sent to Longman and Co. Paternoster Row, by Jan. 7, and Prospectuses, Bills, &c. to be stitched in the Number, a week later.

A SPLENDID PORTRAIT of the QUEEN, in her Coronation Robes, engraved on Steel by R. Picken, from an original Drawing by F. R. Say, will be delivered gratis with the Court Journal, on Saturday, Jan. 7, 1853. To prevent disappointment, orders should be forwarded immediately to the Booksellers and Newsmen; where Specimens of the Portrait may be seen.

A limited number of Proofs, printed in an extra size, on India paper, price 4*s.* are now ready for delivery.
Office, 19, Catherine Street, Strand.

On Sunday, January 10, will be published, price Sevenpence, a new Weekly Paper, entitled

THE TOWN.

The object of this publication is to support the present Ministry as long as its views shall be consistent with the welfare of the people; to attempt the Correction of Public Abuses; the Exposition of those Private Vices which interfere with the general good; the Abolition of Sinners and undesired Penions; and, instead of mutilated extracts, to combine a copious and accurate Report of Parliamentary Debates, Foreign and Internal Politics and Police, Civil, Commercial, Financial, and Sporting Events, with a large proportion of Fashionable, Literary, and Theatrical Intelligence, derived from sources exclusively its own.

In order to effect this end, the Paper will consist of thirty-two closely printed folio columns, containing more matter than any periodical of a similar price.

Published at the Office, No. 2, Wellington Street, Strand.

MUSIC.

For January, price 2*s.*

THE HARMONICON. Contents.

Music.
Overture, "Idomeneo," Mozart—Two Gallipades, (MS), Satelli—Andante and Rondoletto, Lindpaintner—Canzone, Latour—Ballad, Bishop—German Robber's Song and Chorus, Kulau.

Musical Literature.
Memoir of John Brahman, Esq.—Elements of Singing—David before Saul—A New French Opera—Mozart's "Idomeneo"—Gizziello—Musical Professorship in Edinburgh—Review of Musical Reports of a Dilettante—Philharmonic Society—Foreign Musical Report—The Drama, &c.—The page contents, &c. for 1851.
London: Longman and Co.; and sold by all Booksellers.

BOOKS PUBLISHED THIS DAY.

FRASER'S MAGAZINE for TOWN and COUNTRY. Price 2*s.* 6*d.*
The January Number contains:—The Political Conduct of the Clergy—Love and the Myrtle-Leaf—Maritime Romances and Parliamentary News—Gallery of Literary Characters, No. XX.; Author of the "Bosny," with a length sketch—The Meeting of the Bosny—What is the "Currency Question?"—Recollections of Versailles—Lines written in Moore's Life of Byron—The Stock Exchange, No. II.—Bits of Classicallity; Stanzas on Woman, Autumn, and Christmas Poem—Lady Poets of France in the Nineteenth Century; Madame Amable Testelin—On the Banks of the Rhine—Another Bill, which is not "the Bill," but something quite different from "the Bill"—Socks and Buckins, No. II.—The Reform Bill and the Landed Interests—Facts connected with recent Manifestations of Spiritual Gifts. By the Rev. Edward Irving—A Brief Good-morrow in the New Leap-Year (with a Song)—A Few Lines to our dear Contributors, with a Word on Attila Watta.

Continued success for two years has emboldened the Proprietor of "Fraser's Magazine" to make fresh exertions, and invest a larger capital, in rendering his Journal the most complete of the monthly publications of the kingdom. He has obtained the assistance of the first writers of the day in every department of literature—among whom are individuals high in political office, and competent to write with the best possible information on the movements of parties, the external and domestic policy of the country, and the measures of the late and present administration. The Publisher proudly appeals to the contents of his volumes for the truth of this assertion. The Magazine will be found every way worthy of the perusal of every true lover of his country—of every man who feels interested for the preservation and welfare of the Church, the King, and the Constitution. Its opinions will neither be told for or against nor biased by self-interest. Amid the numerous assaults of its enemies—assaults which it only laughs at—this Magazine has made a successful stand for sound, honest, and wholesome criticism; and while the patronage of the public increases, the zeal of the Publisher and the improvement of his pages shall increase in a corresponding degree.

With regard to literary merit, also, the Publisher courts examination. Reviews of all new works have been undertaken in the most fearless spirit of independence. This characteristic of his Magazine has raised him many enemies among dishonest critics, literary assassins, and libelers who make an impure livelihood by dealing out trash and garbage to the public. On all such, and in spite of their puny hostility, "Fraser's Magazine" always has been, and will always continue, the avowed and mortal enemy. The Journal is not connected with any large publishing house, and the public have the guarantee that its opinions will neither be told for or against nor biased by self-interest. Amid the numerous assaults of its enemies—assaults which it only laughs at—this Magazine has made a successful stand for sound, honest, and wholesome criticism; and while the patronage of the public increases, the zeal of the Publisher and the improvement of his pages shall increase in a corresponding degree.

In each Number will be found one or more Papers on Divinity and points of Doctrinal Controversy. Politics, Tales, Dramatic and Senatorial Strictures, Criticisms, Poetry, and Humorous Satirical Compositions, make up the remainder of each Number. In addition to these are given full-length Sketches of the most prominent of our Literary Characters, with short Biographical and Descriptive Notices. The following have already appeared: William Jerdan, Esq., Editor of the "Literary Gazette." Thomas Campbell, Esq., late Editor of the "New Monthly." John Gibson Lockhart, Esq., Editor of the "Quarterly Review."

Samuel Rogers, Esq., Author of "Pleasures of Memory."
Thomas Moore, Esq., Author of "Lalla Rookh."
Dr. Walter Scott, Author of "a Life of Byron."
John Galt, Esq., Author of "a Life of Byron."
Dr. Magin, Co-Editor of the "Standard."
Dr. Crofton Croker, Esq., Author of the "Irish Fairy Legends."
Hon. Mrs. Norton, Author of the "Undying One."
Professor Wilson Croker, Esq., Editor of the "New Monthly."
Miss Mitford, Author of "Our Village."
Don Telesforo de Trueba y Cosío, Author of "the Esquisses."
Earl of Munster, Author of "a Journey from India to England."

Lord John Russell, Author of "Memoirs of the Affairs of Europe."
Right Hon. John Wilson Croker, Editor of "Boswell's Johnson."

Washington Irving, Esq., Author of the "Sketch-Book."
Lord Brougham and Vaux, Author of the "Times."
Robert Montgomery, Esq., Author of "Satan."
Of some of the Numbers, second, and of others, third editions have been required; and the work, from the commencement, either in Numbers or bound in cloth and lettered, may now be had of the Publishers, James Fraser, 215, Regent Street, London; Grant and Bolton, 10, Pall Mall, London; Edinburgh: M'Pherson, Glasgow; Collins, Bath; Gravel, Liverpool; Stevenson, Cambridge; Talboys, Oxford; Madden, Bristol; Jackson, New York; Galignani, Paris; or, by order, of any Bookseller or Newsmen in the Kingdom; by whom, also, Subscribers' Names are received, and the Numbers supplied Monthly. Price Two Shillings and Sixpence.

Important New Publications.

The following New Works are just published by Messrs. Colburn and Bentley, viz.

DR. NARES'S MEMOIRS of the great LORD BURGHLEY, the Third and concluding Vol. embellished with a fine Portrait of Queen Elizabeth.

II.

Memoirs and Remains of Lady Jane Grey, by Sir Harris Nicolas.

III.

Burke's Dictionary of the Extinct, Dormant, and Suspended Peerages, in 1 vol. 8vo. A necessary Companion to all other Peerages.

IV.

Memoirs of the Beauties of the Court of King Charles II. by Mrs. Jameson.

V.

Memoirs and Correspondence of David Garrick, now first published from the original Manuscripts. 1 vol.

VI.

The Fifth and concluding Volume of D'Israeli's Commentaries on the Life and Reign of Charles I.

VII.

The Diary and Correspondence of the celebrated Dr. Doddridge. Edited by his Grandson. The Fifth and concluding Volume.

BLACKWOOD'S EDINBURGH MAGAZINE. No. CLXXXIX. for January 1853.

I. Remote Causes of the Reform Passion, No. I. By the Author of "Partisan Reform and the French Revolution."
II. Intercepted Letters from a Roman Catholic Clergyman residing in Ireland to a Friend in Rome—III. The Bracelates. A Sketch from the German—IV. The Traveller in Spite of Himself—V. State of Public Feeling in Scotland—VI. Protestant Affairs in Ireland—VII. The Farmer and his Wife, A Story of the Great World—VIII. On Parliamentary Reform and the French Revolution, No. 12. Revolutionary Concessions; the New Bill—IX. Reply to Lord Brougham's Speech.
Printed for William Blackwood, No. 46, George Street, Edinburgh; and T. Cadell, Strand, London.

Published by R. Howard, No. 112, Strand.

THE WESTMINSTER REVIEW,

No. XXXI. containing the following Articles:—
1. Archbishop of Dublin on Political Economy.
2. Memoir of Sebastian Cabot.
3. Weights and Measures.
4. History of Medicine.
5. Greek Literature in Scotland.
6. Moore's Life and Death of Lord Edward Fitzgerald.
7. Adjustment of the House of Peers.
8. Adventures on the Columbia River.
9. Caledonians, Picts, and Scots.
10. Cooper's "Bravo."
11. Animal Physiology.
12. Romance and Reality. By L. E. L.
13. Householders in Danger.
14. Tour of a German Prince.
15. Portuguese Africa.
16. Life of Turgot.
List of Contributors, &c.

No. XXXII. will be published on the 31st of March.

The Office of the Westminster Review is removed to No. 113, Strand.

Mr. Bulwer's New Work, &c. just published.
In 3 vols. post 8vo.

EUGENE ARAM.
By the Author of "Pelham," "Paul Clifford," &c. &c.

The Duchess of Abrantes' Memoirs, written by herself. With 2 Portraits, in 2 vols. 8vo.

* Also an elegant French edition of this work, at half the price of the Paris edition, 2 vols. 8vo.

Romance and Reality. By L. E. L. Authoress of the "Improvisatrice," the "Venetian Bracelates," &c. In 3 vols.

IV.
Elliott's Letters from the North of Europe, 1 vol. 8vo.

* A most amusing work. The narrative of the author's personal adventures in spots far removed from civilised society, is of the most romantic kind.—*Morning Post.*

V.
Dr. Granville's Catechism of Health. 2d edition, in a small vol. price only 5*s.*

Emphatically calculated to allay the apprehensions with regard to the cholera.—*Chronicle.*

VI.
The Cook's Dictionary, by Richard Dolby, of the Thatched House Tavern, St. James's Street. Neatly and closely printed in double columns, comprising upwards of 500 pages, is only 9*s.* 6*d.* bound, and containing 5000 Receipts. "It is worth the attention of all householders."—*Atlas.*
Also, just ready,

The Opera; a Story of the Beau Monde. By the Author of "Mothers and Daughters." 3 vols. post 8vo.

Captain Frankland's Narrative of his Visit to the Courts of Russia and Sweden, in the Years 1830 and 1831. 3 vols. 8vo. with Plates.
